WILLIAM BREWSTER

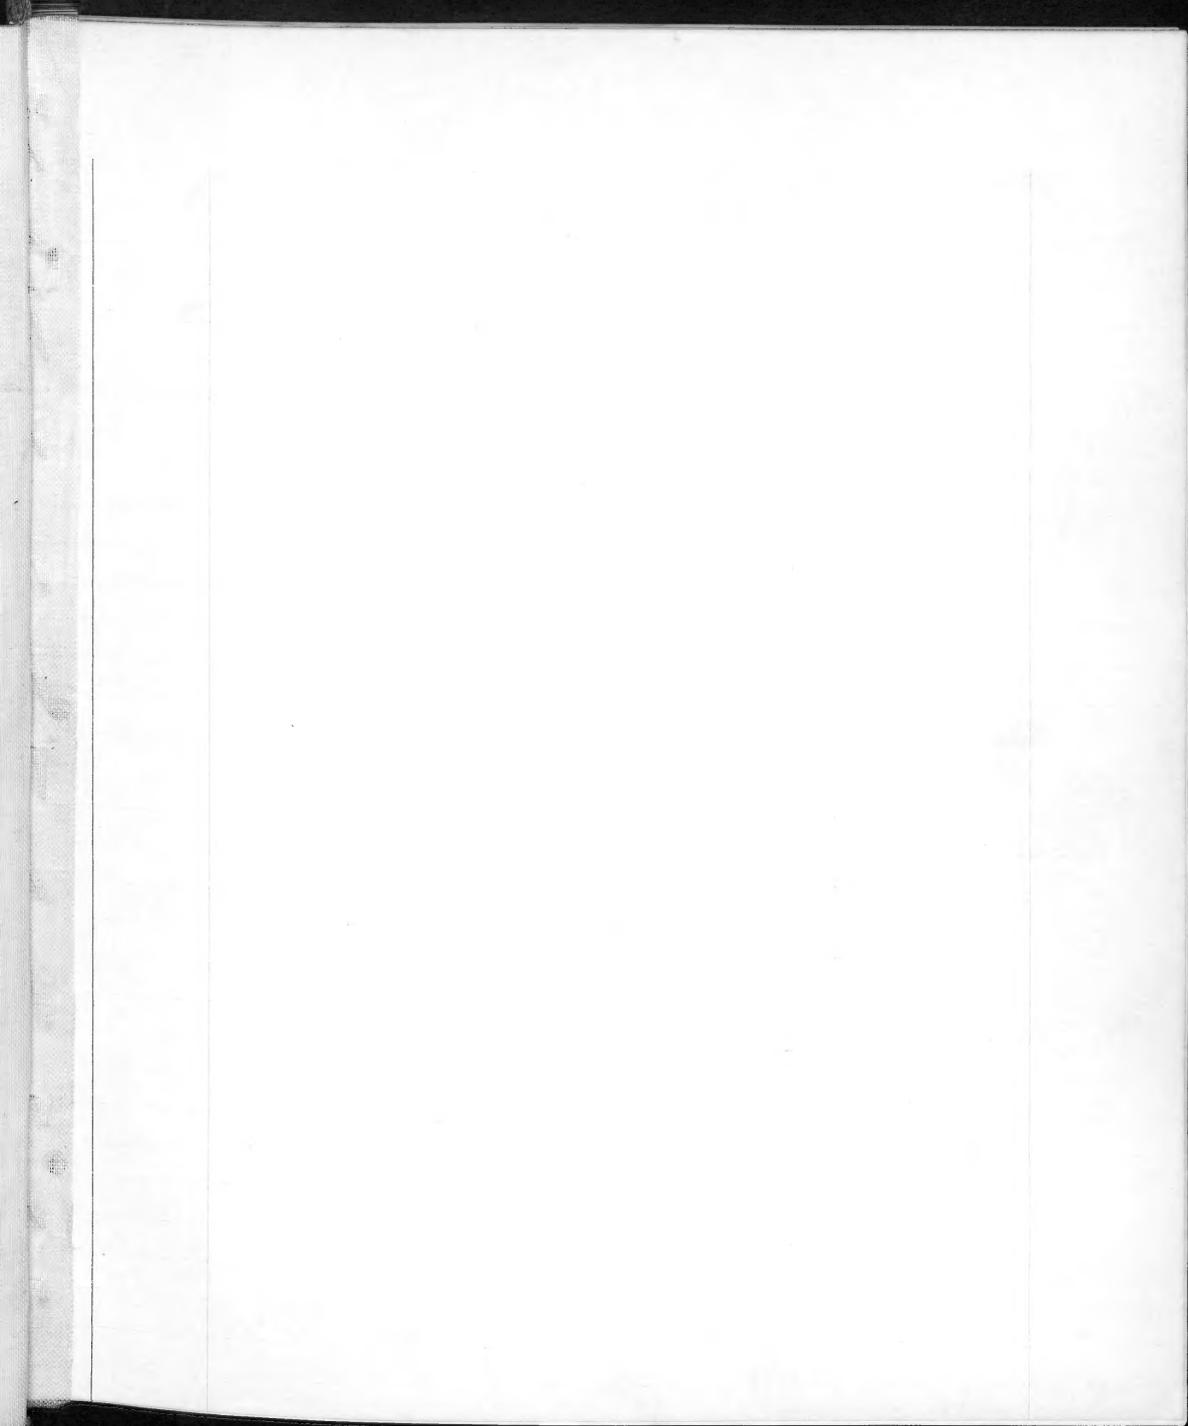

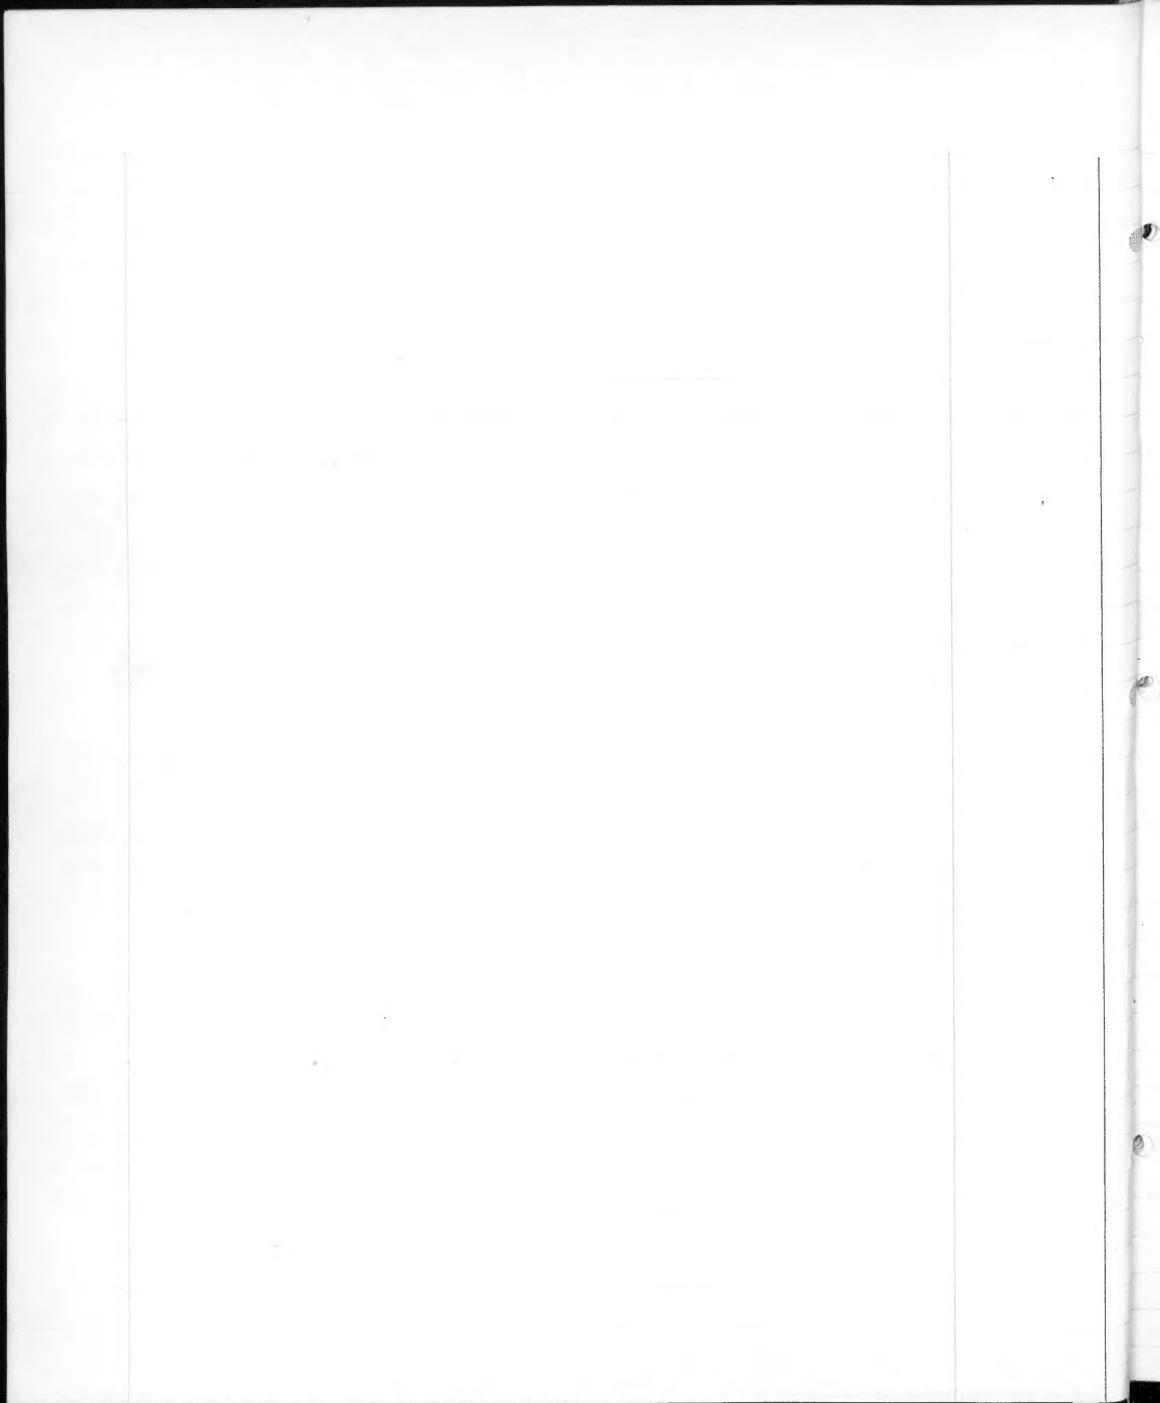

The important systematic notes are copied into  
"Systematic Notes, Vols.1-68." I copied the notes  
checked. Walter Deane, June 11, 1898.

*William Brewster*

East Watertown, Mass.

1888  
Feb. 13

Clear, perfectly still and warm for a winter day.

Over the E. Watertown ground this morning  
starting at 10.30, and getting back at 1 P.M.

Shortly after entering the woods behind the Cemetery I saw two Creepers playing about the trunk of a pine flying round and round as they ascended in a cork-bark course. A Nuthatch was calling a little beyond, Sitta Crows cawing in the distance. No other birds in these Carolinensis woods.

The [redacted] and [redacted] were seen in the fields

Feb. 13

Clear, perfectly still and warm for a winter day.

Over the E. Watertown ground this morning starting at 10.30, and getting back at 1 P.M.

Shortly after entering the woods behind the Cemetery I saw two Creepers playing about the trunk of a pine flying round and round as they ascended in a cork-bark course. A Nuthatch was calling a little beyond, Sitta Crows cawing in the distance. No other birds in these Carolinensis woods.

The snow was nearly a foot deep, crusted in the fields but among the trees loon and powdery. Saw a gray squirrel's track in the cemetery woods.

Crossing the road and climbing French's Hill I found a number of birds assembled in this favorite haunt of theirs. In the row of cedars just below the pines were about a dozen juncos twittering and flitting juncos along the wall one or two occasionally practicing the trills & warbling notes so often heard in March. In the old oaks near the crest of the ridge two Creepers were calling Certhia to one another. I shot them and they proved to be a pair; the ♂ sang once or twice in low tones.

In the belt of cedars to the westward I found numerous traces of a mouse Owl which from the size of the ejected Small Owl pellets I think must have been N. acadica. These pellets were composed wholly of the hair & bones of mice; yet a single mouse track that dotted the snow under these cedars was the only mouse sign that I saw to-day. Perhaps the Owl was only waiting to capture him before changing his hunting grounds!

Pansing a moment on the warm, sunny edge of this grove I thought, sadly enough, of the many many times years ago that I had stood in this

Feb. 131 same spot and looked off over the woods, villages and distant hills that make the view to the north. This view has changed very little in all these years. The ugly hotel, to be sure, ~~was~~ the foreground badly and the asparagus bed and orchard at the foot of the hill are gone, but otherwise it is much the same; the pitch pine woods beyond the brook, the snow covered hills beyond, puffs of steam from the railroad & distant factories rising in the still air and the general effect of peace and seclusion. I heard a Flicker calling below me.

Finished my morning with a tramp through the Arsenal woods. No birds save a Chickadee or two and a second Flicker but very many squirrel tracks (red squirrels, all of them) and one of the squirrels snickering somewhere in the oaks.

Chadbourne saw a large flock of Crossbills in these woods on Jan'y 31<sup>st</sup>. I do not understand what attracted them for there are no cones on the pitch pines. There are also no cedar berries so the prospect is poor for Robins and Cedar birds this year.

English Sparrows were scattered about everywhere over the ground covered to-day.

Before starting this morning I saw two Juncos in the street in front of my house. Doubtless there is already a slight influx of migrants that have been wintering further south; certainly I have seen no Juncos in Cambridge since November and there Cuckers is a larger number than I should have been likely to find in the Waterdown wood in January.

English Sparrows.

Slight influx of birds from the south.

1888

## Revere Beach, Massachusetts.

March 20

Cloudy with occasional light showers; warm.

To Revere Beach with ~~Chubb~~ by 9 a. m. train. Left the cars at Point of Pines and first inspected the pines behind the large hotel in hopes of finding Crossbills there. There were English Sparrows in abundance and four Tree Sparrows (*S. monticola*) but *S. monticola* nothing else saw a single Robin. In the bushy thickets around the outskirts of the town saw Sparrows swarming as usual at this season and, despite the gloomy weather, singing freely. We saw none elsewhere along the beach although they used to be numerous during migration time at several places, especially Oak Island.

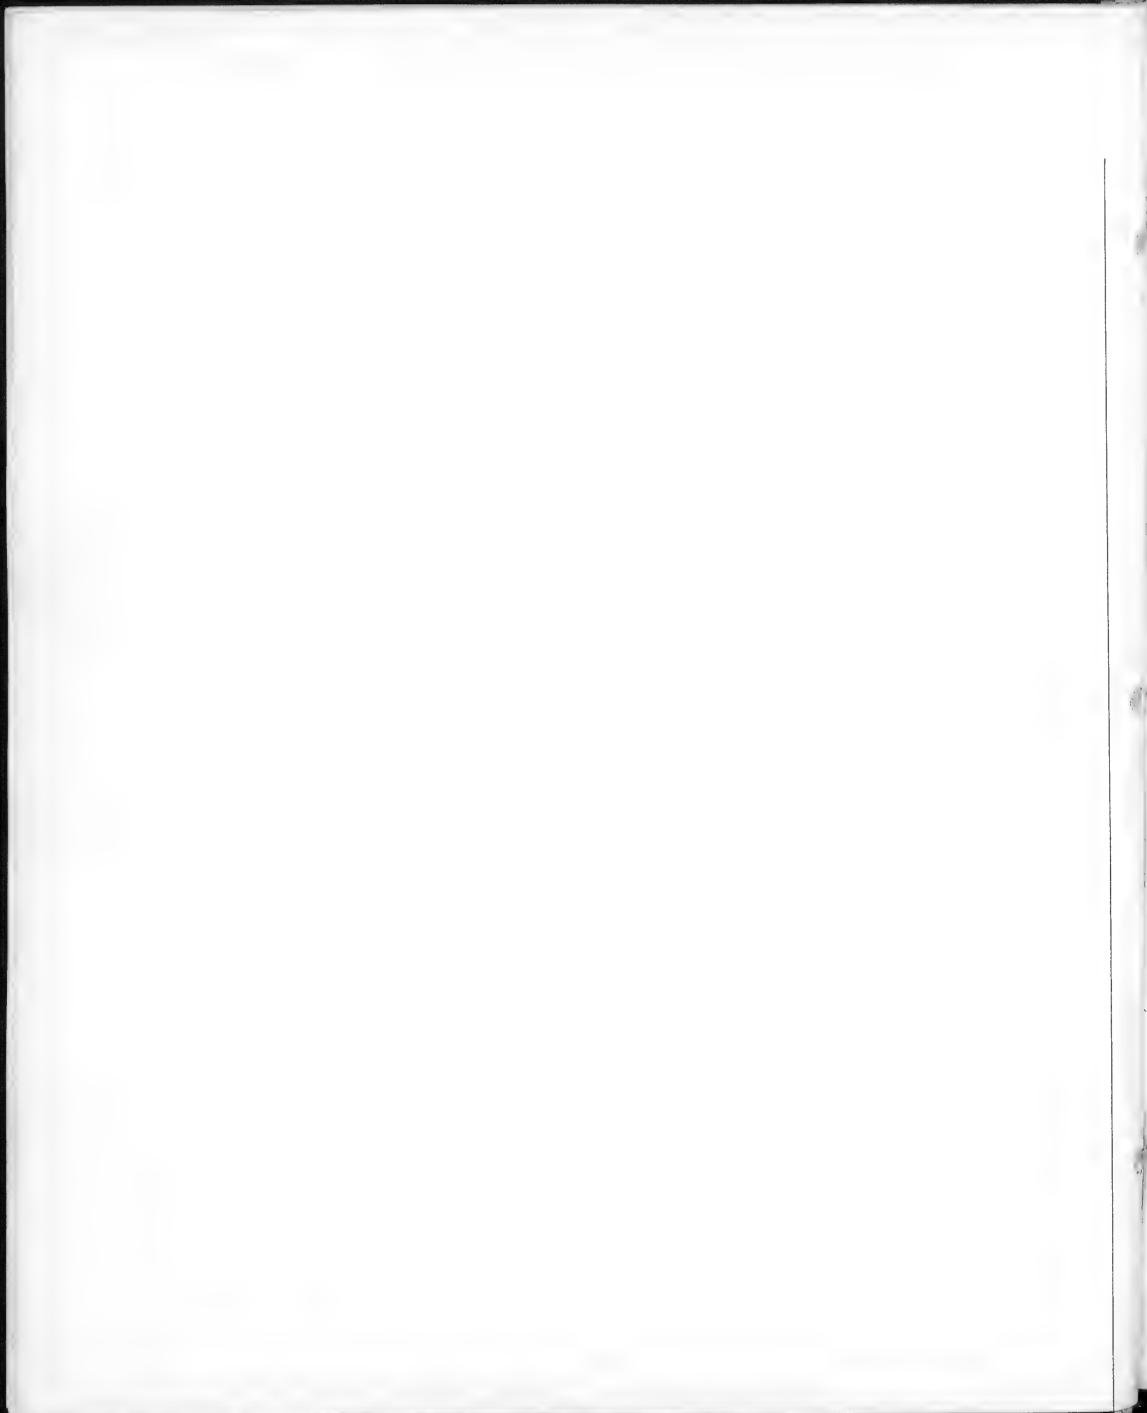

Near the extreme end of the Point we came on a flock of about 15 Pine Squirrels feeding among woods on the side of a dyke embankment. Firing two Savells into them we killed eight.

Chapman

Retracing our steps to the station & crossing the railroad we next tried the marshes. There were no small birds there but we saw a flock of about 30 Crows (evidently migrants), about as many Golden eye Duck feeding in the water, and numerous Herring Gulls.

The rest of the way to Oak Island we kept along the beach edge. Pine Squirrels were exceedingly numerous the entire distance, in flocks of 10 to 15 birds each. We shot nine more specimens. I made one captured shot at a single bird passing very swiftly before the strong S. E. wind.

Besides the Squirrels we saw a single Snow Bunting. & many English Sparrows, the latter feeding on the wet beach in flocks. Returned to the city.

1888

Watertown &amp; Belmont, Massachusetts.

March 22 Clear, with warm sun and high, cold wind.

Took the 10 o'clock car to Mt. Auburn and spent about two hours going over the usual ground. The country woods and French's hill yielded absolutely nothing save a number of English Sparrows. Just beyond the cedars I heard the first Bluebird, warbling blithely as he flitted over the open fields. Near the Arsenal a brushy hollow contained a small band of Chipping and three or four Song Sparrows in full song. On the ridge beyond were two *Cathia americana* both of which I shot. Hearing the crack of a pistol at the north end of this ridge I went to the spot and found Chadbourne in the act of aiming at a *Cathia* on one of the century old white oaks. I shot at the bird over his head he firing at exactly the same instant. He had killed another & we shortly found a third near the same spot.

Crossing the railroad we proceeded through the oak woods & came to the main road in front of Frazar's where George met us with the buggy. On the way near the brook Chadbourne shot a pair of *Loxia americana* which came flying overhead and alighted in a low willow.

The next dawn to Belmont being by the way a pair of Bluebirds, a *Cathia*, and adult *Peucaea lineata* in an apple orchard & a large flock of Pine Squirrels feeding among some weeds. In the Arsenal woods (I forgot to mention) we saw two flocks of Rusty Grackles, a Flicker, and heard a Blue Jay.

Climbing the big hill by way of Prospect St. we left the buggy at the delta and entered the cedar woods. For some time we could find nothing but at length heard a Crossbill peeping among

(March 22) the pitch pines. Looking closely I at length discerned three of them birds feeding among the cones & shot them all in quick succession & also a fourth which flew into the tree just after the third bird fell.

During the next half hour we repeatedly heard & saw Crossbills flying about in & over the woods but could find none in the trees. Crossing the road we explored the cedars & pines to the north being a single Crossbill only. Returning we shot three Fox Sparrows in the bushes along the road & in the cedars near the delta found a large flock of Purple Finches & Pine Siskins & with them four Crossbills. Several of the Purple Finches were hugging. The Crossbills were in the top of a red cedar apparently feeding on its berries. I shot three of them, two at one shot. One lodged in the top of a tall cedar giving me a hard and dirty (for the branch was wet) climb before I could secure it.

We saw 20 Robins, Fox Sparrows, and Red wings. Robins were seen by Bolles in great numbers on the same ground March 18<sup>th</sup>.

In a sunny hillside I started a butterfly *Vanessa antiope*. There was heard, or heard of, any Hylas or Wood Frogs yet.

The country presented a typical March aspect to-day about two-thirds bare and brown, the other third dirty white with washed brown drifts & patches or blue gray with sodden snowier. The roads everywhere in a horrible condition, the frost coming out. The pines & cedars very bright fresh green.

1888

Belmont, Massachusetts.

March 24 Clear and cold with high N. wind.

Off at 8 A. M. driving to Prospect St. where George waited for me during the entire forenoon at the delta. The drive to Belmont against the cutting wind was a severe experience and we were both chilled through before we reached the shelter of the great hill. On the eastern side of this hill it was everywhere warm enough in the sun but the east & western slope was uncomfortably wind-swept even as late as noon. Everything was frozen hard in the early morning.

Starting from the delta I first descended the eastern slope finding a flock of big Bluebirds in an orchard & a large flock of Cedar Birds & Purple Finches in cedar woods. I also saw a fine ♂ *Peis pubescens*. The Purple Finches were singing in an undertone & with them were a number of juncos singing the hammer song without the additional liquid notes often heard at this season.

Returning to the delta & crossing the road I suddenly heard in the distance the superb song of a Fox Sparrow. Hurrying to the spot I found two of these birds with a large flock of Purple Finches. The Sparrows like the Finches were not singing their full song but still the burst of rich music that came from the whole throng was worth going a long distance to hear. There must have been upwards of fifty Purple Finches in this flock & nearly half of them were ~~red~~ males. They were feeding on the ground under the cedars on a sunny eastern slope sheltered from the wind.

In the yellow pine woods I found no Crossbills & only two Pine Squirrels but there was a large flock of Cedar Birds and a little ~~troop~~ of Titmice evidently the same seen there on the 22<sup>nd</sup> for one of them was again whistling the double ph-be or the ~~de-ay-woot~~

(March 24)

I next visited the owl hole and found a large number of Robin's feathers in the bottom but no owl. Chadbourne removed some pellets from the ground beneath on the 22<sup>nd</sup>.

In the bird run to the westward I started a Rusty Grackle & saw more Titmice.

Retracing my steps I crossed Prospect St. & in the meadows near the maple grove but found about 25 Robins & as many Rusty Grackles feeding on the bare ground along the open brook.

Another large flock of Cedar Birds and a small one of Purple Finches in the cedars to the south of this meadow. Also flushed two Grouse in some hazel & andromeda bushes near a springy run at the east end of these cedar woods.

In an orchard below I heard Red Crossbills calling & soon made out a flock of about a dozen sitting in the top of an apple tree, their feathers ruffled so that they looked nearly as large as Robins. I shot one when the others took wing & over and keeping over the open fields to the south disappeared in the distance.

Despite the cold blustering weather I saw this morning at least four times as many birds as on the 22<sup>nd</sup> over the same ground. They were also, as a rule, singing more freely although the Bluebirds to-day were wholly silent & Song Sparrows nearly so.

1888

Ipswich, Massachusetts.

March 30

Cloudless with a warm sun & cold but not strong N. wind.

With Denton took the 7.30 train for Ipswich. Hiring a skiff at the wharves we were soon on our way down river. The tide was turning up as we started but the strong spring freshet swept us down swiftly nearly to the Neck before we began to feel its influence.

There were no birds along the banks except Crows of which dozens were constantly in sight. As usual these were very tame and I soon had a good shot at one that was passing the boat. It flew to an elm & alighted but soon dropped dead. Landing to get it I saw three Pine Siskits & a Tree Sparrow. Song Sparrows singing.

We next landed at the mouth of the river & beat the sand hills carefully. Found only one P. princeps at which I fired four unsuccessful shots. It ran wild each time & finally escaped. While searching for it after the second run D. flushed a Wood. eared Owl. He fired a charge of dust without stopping it, then we both fired #10 at the same instant, bringing it down. It was within ten yards of the spot where I once started & shot one in the autumn; viz at the west end of the fresh-water meadow.

P. princeps

Also acc; ~~birds~~

On the beach I saw a Snow Bunting viz & alight on a huge cake of ice at high water mark. Approaching I made out a dozen or more feeding about a pool at the base of the ice. I could not get two together so finally shot one sitting and another when the flock was. Denton afterwards shot a single bird that had an old, partially healed wound in a broken leg.

Snow Bunting

Climbing the great hill we descended to the large sand dunes at its southern base. All the morning we had seen Crows passing steadily north at intervals but over the great sand hills they were

(March 30) Foraging almost in a steady stream flock quickly  
succeeding flock, some of the flocks numbering at  
least 200 birds but the majority from 10 to 50 birds.  
Concealing ourselves I got several shots each, D.  
killing two & I one bird. I was preparing my  
specimen for wrapping when a snarl of wings attracted  
my attention & looking up I saw a fine old ♂  
Marsh Hawk within 20 yds. beating the air frantically  
in his efforts to get out of range. In this he succeeded  
for before I could win & cock my gun he was 80  
yards away.

Migratory  
Crows.

He did not explore the great sand-hills being obliged  
to cut our day short & return to get up river before  
the tide ebbed too strongly. Passing the spot where  
we shot the Owl D. flushed & shot a P. princeps  
probably the same bird seen early in the day.

Crows

On the way up river I made a long shot at a  
Crow that attempted to pass over us.

During the day we heard & saw Horned Larks  
at intervals, perhaps 15 in all, the largest flock  
containing six birds only. All were flying north.

Otocoris

At the station (where we just missed the 4 P.M. train  
& had to wait until 6 P.M.) we found Bradford Torrey  
and the Fasons (two brothers & their father). They had  
spent the day on the great sand-hills when, near  
the light-house, they saw about eight P. princeps &  
heard what they took to be one singing a strain similar  
to that of P. swainsoni but louder. They could not find  
this bird. They also saw 15 to 20 Horned Larks along  
the beach among the drift & very tame. Also some  
"Snow Buntings".

Bradford Torrey's  
specimen.

P. princeps  
singing

He saw two Herring Gulls & about 20 Ducks mostly M. serrator  
& Bucephala americana. Some gulls had fine Black Duck.

Duck & Gulls

## Concord Massachusetts

1886. "Fast 2"

Morning clear and still. As the day advanced the sky clouded and the wind began to come in puffs.

remainder of the afternoon it fairly poured.

With Ephraim took the 6.30 train to Concord. After a slight delay at the Mass we launched my boat and started down river. The water was so high that we had to crouch as the boat shot under Flint's bridge and the meadows and woods were all flooded. West Meadows is a lake, smooth as a mirror, set in a frame of woods and hills. We followed the river down to get the advantage of its swift current. It was a perfect morning, absolutely calm, with bright, warm sunshine but without a suspicion of haze in the heavens that foretold the coming storm. Birds were singing on every side. Near the Mass Robins, <sup>song</sup> Sparrows, and Fox Sparrows; on the river below the bridge Song Sparrows, Red-wings, Flickers, Tree Sparrows, and one Savannah Sparrow.

Passerella

Opposite Balls Hill we saw the first ducks, a pair of Whistlers which pitched down from the hills and alighted, striking the water heavily and cutting a long sharp line that glistened on its brassy surface like the reflection of a piece of looking-glass. A few moments later they rose again, their wings sounding distinctly at the distance of half a mile & making a noise not unlike that of a humming top.

Bucephala  
americana

We landed at Balls Hill to walk off from top to top. A fine expanse of water on three sides, on the fourth brown fields, gray woods, and dark green pines. A few patches of snow dotting the north sides of the hills. No ice whatever left in the river. The wind just

(April 5) Beginning to come in puffs from the east rustling the oak leaves, rattling among the pines, and rattling the great lake to the westward. Hearing & long hearing & hearing the notes of some the nearest sounding subdued & distant. No hylas or frogs as yet.

Below the next bend we set our sail and sped on our way. For a night a light S. E. wind arising, stars nearly to be seen. A ledge being over our well in the water a fine adult ♂ mewhawk which, at a distance, resembled a cackle of floating in. A Norwegian shoonie company with two others, we found lying in wait for Drucks behind a bushy island told us that he had shot a fine large Duck the evening before. It flew nearly half a mile, then dropped dead into the water. Approaching the spot he found a "New hawk" trying to rise and carry it off. He finally consented to sell it to me & we rowed over to his landing to get it. It proved, as I expected, a ♂ Goldeneye, one of the finest I have ever seen. It was shot through the left breast.

We next landed at the field where we got the ♀ Marsh Hawk a year ago. As on that occasion there were many birds in the wood peckers and stubble, chiefly Song Sparrows & Juncos with a few Fox Sparrows - two House Finches, a pair of Bluebirds, one Pheasant, and a Robin or two. Redpolls (*Regulus*) and Goldfinches heard & seen flying over but none alighted. Several little bands of Swallows (*H. bicolor*) - on the same bend several times - passed through the opening; Spelman shot one of them. Under the scaps hole was a fine pellet but no scaps within.

Returning to the river we heard the hoarse of a Canada Goose and looking up saw a large flock of these birds flying northward at a great height, in

Continued: Inwood, Lake Umbagog, Me.  
 5. The boat & gun. ... to ...  
 (2. ... us) scaling about over the river one alighted for a moment. In the distance on the ...  
 ... meadow a Red-tailed Hawk was ...  
 over a cluster of tall white pines. He resolved to ...  
 ... for a rest ...  
 ... had clouded over, the wind ... fact &  
 the day from a bright sunny one had changed to a gloomy threatening one.

As we approached the pines, passing through some bits of brush and crossing a circular bit of flooded meadow we met two boats coming out. Both parties had seen numerous ducks among the brush but neither had shot any. One of the men told us of a flooded meadow beyond the pines and we pushed our way into this through the intertwining bits of maples & birches finding a pretty little oblong pond sheltered on every side by dense woods.

Returning Spelman shot at a Fox Sparrow near the tall pines when immediately a pair of Red-tailed Herons started out among them & began flying around us uttering a peculiar gasping cry & frequently alighting on the slender twigs of the pines. It was evident that they had a nest & landing we made a close search for it. We found no less than four large nests there in the pines one in an oak. Under one was the tail of a Blue Jay. We did not climb to any of them thinking it too early for eggs although the birds made a great fuss all the time.

Buteo borealis

April 5, vicinity.

Just as we reached the boat and were preparing to embark it began to rain and the wind rapidly increased to almost a gale. At the same moment Ducks began to appear in some numbers, evidently driven to the shelter of the timber by the storm.

First came three Wood Ducks, ~~then~~ a flock of six Goldeneyes, then a pair of Black Ducks and finally a flock of a dozen or more Black Duck. None came within shot although several came very near it.

*Aix sponsa*

*Mergus am.*

*Anas obscura*

Packing off we started up river in the teeth of a furious gale of wind and driving rain, begging the east shore. In the midst of this storm I heard a Song Sparrow & several Red-wings singing.

As we were passing a stubble field a small flock of Redpolls pitched down into it. I landed *Agriothus* and shot two at one discharge.

A little above Ball's Hill three Wood Ducks passed nearly within range. In the brush we found a black bass that would have weighed at least three pounds. It was floating belly up, dead.

Setting sail we crossed the Great Meadow easily and swiftly and landed at the east side of Ripley's Hill. There was a large flock of Rusty Grackles in the maple swamp. Among the pines we saw a Crow which flew out of a tree & skinned off down hill into the swamp.

Reached the Mans at 5 P. M., pretty thoroughly wet and chilled.

Saw a single Osprey during the day but no other Hawk except the Red-tails.

Concord, Massachusetts.

1888

April 9

Cloudless and cold all day with high N. E. wind.

To Concord by 6.30 A.M. train with Acadabourne. Taking boat at the Manor we set sail just below Flint's bridge and had an exciting, swift run to Ball's Hill following the river most of the way. At Ball's Hill we decided to get warm for the wind was simply piercing and the air so cold that our sail was frozen stiff and the boat more or less unseaworthy in.

Below Ball's Hill we paddled keeping the western shore and landing just below Lee Davis's hill. Going inland to the large sandy field we found a few Fox Sparrows and started three Carolina Doves. The latter took to the woods where I tried in vain to get a shot. They were very shy but flew only a few rods at a time alighting chiefly in pines. One of them cooed repeatedly.

Returning to the boat we paddled on landing under the lee of the pine clad hill and afterwards landing at the stubble field where we found a few Grass Finches, two Juncos, and plenty of Song Sparrows.

At about 2 P.M. we crossed the river to the pine swamp in Bedford starting several small flocks of Fieldrats and a few Christies all of which was from near the middle of the meadows. Reaching the pines we attempted to paddle through into the duck pond but the water had fallen and we could hardly force our way through. The swim we made started a number of Black Ducks (at least 15) near the pond. After reaching it C. took several photographs and shot a few and

17913  
I saw several Starling hypoleucos. The latter was singing.  
There were also several Fox Sparrows about this pond.  
Heard one hylas there.

While in this pond our talking etc. started the Red-tails  
from the pines and both birds sailed over and  
pest us many times screaming occasionally. We  
visited all the nests and C. tried to climb to  
one of them but ran it up after getting up half way.

Started up river at 4 P.M. finding to Ball's Hill before  
a furious wind the entire meadows being covered  
with white caps. Above Ball's Hill paddled a little way, C.  
chasing ~~some~~ Red wings and a Pewee. Then  
telling the sail again we ran, down hauled, nearly  
to Flint's bridge.

At sunset the wind lulled and the air grew warmer.  
Red-wings were singing on every side. A Kingfisher (we  
saw several earlier in the day) rattled as he passed  
high overhead. Near town Robins were singing in the  
tops of the elms and maples.

Below Ball's Hill we saw two or three Ospreys - or perhaps  
the same bird two or three times - noble birds easy  
and graceful of wing, nearly white beneath but  
with a dark bar on the under side of each wing  
near the carpal joint. One of them whistled several  
times.

Concord, Massachusetts.

1888

April 12

Morning clear and delightful with strong but not cold N.W. wind. Cloudy all the afternoon with frequent light showers. A superb sunset.

To Concord with Denton by 8 a. m. train. Reaching the manse we launched my boat and paddling to the head of the meadows set the sail and ran easily and swiftly to Ball's Hill and thence "close hauled" and more slowly to the pine swamp in Bedford.

At the head of the meadows a large flock of Red-wings were singing in a waffle making a confused yet musical, and essentially spring-like, melody of sound.

Some Rusty Blackbirds were tinkling in the waffle swamp behind Repley's Hill, a few Fox Sparrow singing near the manse and Flickers and Robins in the distance. Only a few Song Sparrows were heard and no scattered Red-wings.

On the broad open lake that covered the Great Meadows we ran quickly down on a pair of Sheldrake, the ♂ a superb old fellow. They were comparatively tame not flying until we were within less than 100 yds.

*Mergus americanus*

Just below Ball's Hill we started four Golden-eyes and still further down ten others. They were excessively shy rising at least half a mile off. As they passed to the windward we distinctly heard their wings.

*Golden-eye*

Reaching the pine swamp I landed and crept in to ~~the~~ duck pond. Although I used the utmost care and made almost no noise three Black Ducks which were feeding near the outlet either saw or heard me and rose before I was nearly within range. I then crept quietly into the pines hoping to surprise the Red-tail on his nest. ~~Seeing a better~~

about midway between the three nests that promised best I shouted and thumped the trees but started nothing.

Returning to the edge of the water I shouted for Denton when a shadow glided past my feet and looking up I saw one of the Harvets sailing high overhead. At the time I suspected that she had flown from the large nest in the tall pine just behind me and this was doubtless the case for after climbing to the other nests and finding them empty Denton found in this nest a set of two eggs one of them much incubated. While he was in the tree a Carolina Dove passed giving me a long shot which I missed. I also saw here a Marsh Hawk & a Great Blue Heron and shot a pair of Brown Creepers.

Nest of  
Castro borealis

Crossing the river we next landed near the stubble field. It was alive with birds Fox Sparrows about the outskirts, Song Sparrows and Tree Sparrows along the walls and fences, Grass Finches Savannah Sparrows and Junco feeding near the middle. Of juncos we saw at least 300 in a single flock. There were also a few Redpolls with the juncos & a single Goldfinch. Denton also found a Creeper in some neighboring pines. In the heavy pine woods on the hill to the south we started a Cooper's Hawk & saw a Pine Warbler. During most of the time we were here it rained more or less heavily.

Started up river at 4 P.M. moving slowly & keeping near shore. Red-wings singing on the maples & willows, scattered about. Shot several. Saw a large flock flying high apparently migrating. Higher up they were very numerous, singing on every side. As we reached the frame the clouds rolled up from the water horizon and the sunlight poured a flood of warm, strong yellow light over the hills, houses, and trees.

Cambridge, Massachusetts.

1888

April 18

Cloudy with heavy showers at intervals.

To the Fresh Pond marshes at 9 A.M., driving up, and walking back after spending the forenoon there. The weather was wild and windy and birds, albeit numerous, were not singing freely. Nevertheless I heard many Swamp Sparrows and Tree Sparrows, 1st. Wren, one Red wing, (only two here) and numerous Song Sparrows.

I first explored the maple swamp finding a Robin or two, several Song Sparrows and a Swamp Sparrow or two. A Titmouse flew overhead but did not alight. A single Red-wing singing on a maple. Two Rusty Alkinds and five Cow Birds seen flying. Spent nearly an hour without getting a shot at anything. A few hylas and Marsh frogs piping.

Passing through the middle of the swamp I next entered the meadow that separates it on the north from the F. R. R. Several Swamp Sparrows here. Saw a Yellow Red poll (*hypodryas*), and started a Snipe twice, the latter bird very wild.

In passing through a ditch shot two Virginia Rails. One wounded by my first shot ran a long chase running like a mouse from tussock to root. Shot at it four times in all before killing it. Both Rails silent, one perched in bushes a few inches over the water.

As I was leaving this meadow three quinnets entered it working a sparrow & evidently looking for Snipe. I afterwards heard their first four or five shot in the meadows to the westward. All these meadows were in excellent condition for Snipe, the first all out, the water about right, the grass already gone in places.

Following the railroad back I entered the swamp

APR 18 1888

swamp on the western side & crossed it shooting several birds on the way. This swamp has changed sadly since my last visit. In Steam Road has been a wide drain from its eastern side and more than half of the original swamp has been replaced by an unsightly clay pit. The untouched portion is drained nearly dry and fire has killed most of the bottom bushes as well as much of the meadow grass. Dense and tall weeds have sprung up everywhere and the place has become a perfect paradise for seed eating birds. It fairly swarmed with Sparrows to day, chiefly Song and Tree Sparrows. Of the latter I saw not less than fifty. They were in full song and their wild, sweet, plaintive notes were almost incessantly heard on every side.

There were also many Pine Siskinets, one flock of about twenty, several of five or six, & a few single birds. No Fox Sparrows or Goldfinches and not a single Red wing.

As I crossed the fields on my way homeward I heard a Flicker laughing in the oak grove at the foot of Vassals Lane. What crowding memories of days long past that sound invoked! Days when Meadow Larks whistled over the surrounding fields, when Snipe sprang by dozens from the wet runs and hollows, when Red-wings were singing on every scattered tree top. All are gone now from these fields but the Flicker still calls from his favorite grove, has once scarce heard - over the din of the English Sparrows. How much longer will he stay?

At the head of Sparks St. in Mr. Adams's company saw a *Regulus satrapa* and a *Cathartes*. Winter birds are staying late this spring. The Junco nearly all gone, however; but only two Co-dons

1888

April 24

Cloudy and cold with occasional flurries of snow. Wind N.

To the Fresh Pond swamps at 9 a. m. spending the forenoon. Used my double 22-32 pistol for the first time & killed sixteen birds with it, mostly Swamp & Tree Sparrows.

Upon first entering the swamp heard a Ruby crowned Kinglet chirping & chattering. He was so restless & active that I could not get a shot at or even overtake him. But I afterwards killed a ♂, probably the same bird, in the north part of the swamp.

Within a few rods of the spot where I killed the pair of Rails on the 18<sup>th</sup>, in fact in the very next thicket, I found another pair to-day. I shot the ♂ easily enough although he dodged cunningly behind a cluster of stems moving as I moved so as to keep his body covered but keeping out at me from time to time. The ♀ was slyer & eluded me by running out into the grass & talking wing.

Rallus virgin

In one of the dryer of these thickets I found two Fox Sparrows scratching among the leaves making as much noise as a brace of chipmunks. There are also a few Swamp Sparrows in this swamp.

I kept around the swamp without entering it and then turned homeward through the brickyard swamp. This tangled, now nearly dry and weed grown place was to-day, as on the 18<sup>th</sup>, fairly alive with Sparrows chiefly Tree and Swamp with a few Song. I followed them about for an hour or more.

In neither swamp did I see a Black-bird or Swallow of any kind. How they quite deserted this old time haunt or is it too early yet?

Taking a short cut through the Thompson orchard I was surprised to hear a Pine Siskin singing near me

APR 24 1889

and shortly afterward to see him hopping about in the  
lower branches of an apple tree. There were also a pair  
of Bluebirds in this orchard, taken & skinned, the first I  
have seen perched in Cambridge this Spring. although  
I have heard a few warbling in the air over one place.  
There are positively no Song Sparrows in our part of  
Cambridge this season although plenty in the swamps  
of course.

In Dr. Weyman's hollow I noticed as I passed five Junco  
and two Fox Sparrows hopping about on the ground  
in a bit of stub.

Waltham, Massachusetts,

1888

April 25

Cloudless but cool with rather strong N. W. wind.

Off in the buggy at 9 A. M. driving to the "Warren Reservoir" in Waltham where I spent the morning watching birds. Birds were everywhere scarce and silent. During the run to and from Waltham I heard only a few Song Sparrows, saw ten or a dozen Bluebirds (all silent), a few Robins, and a large flock (30 or more) of Junco the latter feeding in a thicket.

My tramp began at the old reservoir by the roadside, led up over the cedar-clad hill to its eastern extremity near the Warren place and ended in and about the Warren woods proper.

For sometime I neither saw nor heard a bird of any kind. The pastures about me were brown and leafless as in midwinter. But near the eastern end of the ridge I heard some Pine Siskinets first, then Red Crossbills and finally a low medley of chirps & twittering which proved to come from a small mixed flock containing two Chickadees, a *Regulus satrapa* & a *R. calendula*, a Pine Warbler & several Pine Siskinets. There were also a pair of Crows here very noisy about their nest in the top of a slender pitch pine. I was surprised to observe this lack of discretion on their part.

In three different places I found Hermit Thrushes, four or five together, silent, tame and sluggish as usual in this season. It is strange that they are so much less alert and shy than their songsters were in spring and yet so very wary and elusive when on their breeding grounds.

On the sunny slope of a knoll among cedars I came suddenly on a cluster of garter snakes to

Garter snakes

expressions & sounds, together that it took me some time to disentangle them after waiting several minutes to give them an opportunity to do this themselves. They tried hard enough but their frantic efforts seemed to result in only greater confusion. They made a mass that would have filled a large hat. I counted them carefully, as one by one they picked off & being liberated, and made the number seven. They were all of nearly equal and about medium size. Near the spot was a ledge with crevices into which most of them retreated.

Wood frogs and Mead frogs in full cry, began with piping but not freely. The croaking of the former heard at a distance reminded me of the gabble of Brant although it does not perhaps resemble it closely. Antelope butterflies out in great numbers to-day, they made me think of Woodcock's ones & I saw one a little like one in the mus but did not visit the spot where I found the nest in 1875. Saw no droppings or borings.

As I was watching a *Buteo lineatus* & while at a great height it suddenly broad its wings and shot down head long fully 1000 ft. coming upward slightly at the top then falling again to the ground apparently. I think it swooped on some animal on earth. The wind was a S. by E. gale.

On the way home saw a *Falco sparverius* near Bird's Pond. It crossed the road just ahead & passed within gun-shot flying very like a Wild Pigeon.

Saw two White Bellies & one Barn Swallow flying over the house. *V. atrum viride* about a foot high in groups in clumps light green very conspicuous about the only really green thing in the woods.

Michigan.

Grand Rapids to Cadillac

1888

May 8

Cloudy with occasional light showers. Cool.

Left Grand Rapids by the 11.30 a.m. train and reached Cadillac at 4.30 P.M. The country for about twenty miles north of Grand Rapids is very like that of Massachusetts, varied, broken and hilly, well watered by brooks and small rivers, with green, fertile fields in the valleys and most of the hill tops and steeper slopes heavily timbered with second growth white pines and hemlocks and various hardwoods among which I recognized the white oak, beech, red maple, &c.

Most of the streams were rapid and several of them very beautiful with the trees along their banks hanging out over the water.

Gradually as we sped northward the scene changed. In the swamps spruces (*A. nigra*), larches, and arbor vitae became the characteristic trees and yellow birches and red maples the hardwoods. The dryer levels and hillsides had evidently borne, not long since, a heavy growth of white pines of which only the charred stumps and tops remained. The lumbermen <sup>fires</sup> had made such clean work that scarcely a living tree could be seen for miles. As we approached our destination the ruin became more universal and painful until we became tired of looking out on a country that was desolate and unsightly to the last degree.

Of birds we saw many from the car window & heard a few others at the stations where the train stopped. The ounger in the following list was seen at a station near Reed City. ~~The~~

jumped up from marshy places by the side of  
the track and after flitting a few 'wds alighted  
again. In one of the stretches of wooded river we  
saw a small flock of ducks which rose as the  
train passed and streamed off low over the water.

Cadillac, Michigan.

1888

May 9

Cloudy and cool with a few light showers. Ther. 52 at noon.

Dwight went out a mile or two in the forenoon and shot nine or ten birds. Immediately after dinner we started off together taking a buggy and driving to a lumber camp three miles S. of town. For the first mile the road led through the usual open waste of charred stumps and prostrate logs & over a hill of 200 feet elevation. Saw juncos, Grass Finches, a D. palmarum and a pair of Hoplostictes aedon.

Then we reached the woods, the first primeval forest of white pine that I have ever seen. It was a revelation - wholly unlike what I had imagined. The trees were crowded together, almost as closely it seemed to the eye but of course not nearly so much in reality, as corn stalks in a corn field. Nine tenths of them were pines, the remaining tenth red maples and hemlocks. Of the pines perhaps one third were P. resinosa, the remaining two thirds P. strobus. The needles of both were much shorter than in the east than of P. resinosa not longer than eastern P. strobus. Their average height was certainly fully 100 ft. & there were very many trees that must have been 150 ft. Few of them had any branches whatever less than 50 ft. above the ground. The maximum spread of their tops was not over 20 ft. and the average probably not more than 12 to 15 ft. Their trunks tapered very little, rarely at all perceptibly, to the lowest branches. Their bark was rough & deeply furrowed. Few trees exceeded three feet in diameter at the base. There was little undergrowth & usually none but the ground was covered by

logs in various stages of decay. The eye failed to penetrate more than 30 yards into this woods of. at that distance the trunks became merged into a brown or dark gray mass so thickly did the trees grow. The trunks of the *P. resinosa* were strongly reddish & more slender than those of *P. strobus*.

The woods extended along the roadside about a mile. In them we heard or saw many birds. A Grosbeak (*H. ludovicianus*) and Robin singing, a Hermit Thrush calling, and several Woodpeckers tapping were the most prominent. Besides them a Dead. weis several Winter Wrens, Lon. albicollis, Parus atricapillus, Arctia americana, and along the roadside Song Sparrows. In two places heard Sitta carolinensis & S. canadensis at the same moment. A few Pine Siskinets flying overhead. A Grouse (*B. umbellus*) drumming. Juncos everywhere both on the edges of the woods & in their depths. Chewinks singing & calling, the song as in the East, the chewink note shorter & hoarser, usually only one syllable (wink).

In a hollow where some beeches bordered a pool in which hylas (*H. pickeringii*) were peeping a pair of Wild Pigeons started from the ground and alighted in a beech sapling. D. walked up to within about 18 yds. (we had only a 3/4 cal. pistol) where they flew the ♂ clapping his wings sharply like a tame Pigeon for the first few rods. On our return saw a ♀ fly across the road in the same place.

Crossing the open near town we saw an Otocoris alight on the fence. D. got out & shot it. It proved to be pratensis. On the edge of the big pines a Wood Thrush was singing. In the fields a Meadow Lark. The song of the latter as in Mass.

Cadillac, Michigan.

1888

May 10

Clear and warm, the 70° at 11 a. m. Light breeze in P. M.

Starting at 9.30 a. m. we drove to the lumber camp three miles S of town and put up our horse. The "boss" invited us to dinner which was served in one of the buildings at 11 a. m. We sat down with about thirty droppers mostly Swedes. The table was not nearly so good as at a Maine camp but there was more variety—canned things, pies, etc. The beans were wretched!

After dinner we went in search of *Perisoreus*. I soon lost daylight and kept on alone beating the woods carefully for nearly two hours & refusing all shots at small birds of which I saw & heard many, but finding no *Perisoreus* finally began to shoot *Merula*, *Cerpes* etc. Much of the time I was in a woods composed almost wholly of *Pinus resinosa*, enormously tall, rather slender trees, the ground beneath perfectly free of underbrush & very level.

Pine Martlets and *D. virens* both abundant & in full song. Saw two pairs of juncos building & traced one to the nest which was in a hole in the level ground at least 12 in. below the surface the entrance not over 2 in. in diameter. Shown *Junco* as numerous, not in full song. A *Thryothorus* screaming but I could not find him. A *Picoides arcticus* chucking. A pair of Crossbills piping in the tops of the tall red pines. A Chickadee's nest in a low bush with the birds taking away chips and dropping them a few yards off. Juncos & *L. albicollis* singing on every side. *Sitta canadensis* whistling, blue jays screaming everywhere, a White Wren singing.

Crossed to the main road and walked along it west. Heard a Grouse drum near the road and stalked him carefully. The sound came from a spot where there was several huge prostrate pine logs. I examined them all

... but could see nothing of her bird. I had a ...  
... with ... to me and as I stood within ten feet of  
this the Grouse drummed widely to the east at the base  
of the log on the other side. I saw the dead leaves on the  
ground to one side whirled about us by an eddying gust of  
wind. The closing part of the drum was less confused than at  
a distance. Retreating I made a <sup>half</sup> circle & finally saw the  
bird standing erect as a post his body apparently no thicker  
than his neck. He looked for all the world like an upright,  
ragged stick. I waited a moment but he would not  
drum again and I shot him.

Next went to the small forest pool where we saw the  
Pigeon yesterday. As I was crossing the inlet brook on a log  
the ♀ flew from a branch overhead & alighted within  
fair range on a hemlock bough, oscillating her head & neck.  
I shot #10 at her but she went off followed by the ♂ carrying,  
however, a stream of feathers behind.

From the pond struck over the ridge to the camp.  
Dense hemlocks mixed with pines & beeches all noble old trees,  
snow lying in wasted drifts in the hollows. *Cettia am.* &  
*the canadensis* very numerous. Saw three pairs of *Cettia*  
at one time, one of them building. Near the camp in  
lead pines shot a pair of *Picoides arcticus*. Several *P.*  
*vibronus* cackling & squeaking. A Cooper's Hawk skimming  
close over the ground passed within ten yards of me.  
A Brown Thrasher singing near the camp.

Dwight returned & we drove out to the wood. On the  
way a ♀ Pigeon started among some beeches & alighted  
again allowing us to drive nearly under her. I  
got out and shot her.

*Hyemelis ludoviciana* very common & singing gloriously  
the song echoing in the arches of the woods, strong at sunset.

Cadillac, Michigan

1888

May 12

Cloudy and cold. Ther. 36° at 4 P.M. Toughest light showers. The change in temperature began about midnight last night. Wind W. all day.

To the pine woods near Cusamis' lumber camps at 10 A.M. having the team return for us at 2 P.M.

I spent the afternoon in a limited area between the main road, the path in to the lumber camps and the camps. The woods were dreary and for the most part silent save for the howling of the wind in the pines but occasionally a D. virgin sang or a Parula bird whistled. Grosbeaks (H. ludoviciana) were singing freely much of the time one of them a superb performer. Heard only one Winter Wren and but one Creeper. Saw a great many small birds, however. They were collected in small flocks which were so rapidly through the woods that it was difficult to overtake them. I made a fair bag, nevertheless, killing twenty-four. Lost one Warbler which looked very like Weston. It was badly wounded and I nearly caught it but it fluttered off into a log heap where it was useless to look for it. Killed a pair of Litta canadensis at one shot. The ♀ was incubating and had laid all her eggs.

Dwight left me early in the morning and went over most of the ground which we covered on the 12<sup>th</sup>. He met three large flocks of Warblers one containing at least 25 D. blackburnian. These flocks moved so rapidly from tree to tree that he found it impossible to do anything with them. In one of these flocks he saw two D. palmarum. Neither he nor I saw any Kinglets. The foreman of the choppers saw two yesterday, but none to-day. No grouse drumming this morning.

On the drive out we saw an Otocoris feathered

the shrub near the top of the first hill and a Melanerpes uropygialis on a stub in the burnt lands.

On the return drive we passed a pair of Tanagers (P. erythronotus) which flitted along by the roadside alighting on shrubs.

Size of  
pines.

The foreman at the lumber camp tells me that both red and white pines here average over 100 ft. tall. The tallest trees attain a height of 150 ft. There are very many 125 ft. There are a few white pines in his section that measure 21 ft. in circumference at the base. All the large trees are sawed off at the base with a cross-cut saw, chopped in a little on one side, then thrown by driving in wedges.

Logging

Logging is carried on the entire year, most easily and profitably in summer. The logs are "yarded" by horses and carried along on two wheeled trucks the wheels about 10 ft high. From the yards they are usually carried to the mills by railroads of very narrow gauge and light rails. Many are also driven wherever there are suitable streams.

Adillac, Michigan

1888

May 14

Cloudy & cold; wind S.W. About 2 inches of snow fell last night.

To Cannon's Camp at 7.30 having the wagon return for us at 1.30 P.M. On the drive out we saw less than a dozen birds, mostly Sparrows & juncos. Returning passed a Towhee which was several hundred yards from the woods, among stumps alighting on the ground. He looked chilled and half-stunned as well he might for it has been hard last night and moved at intervals through the morning.

Upon reaching our ground we separated Dwight tattering to the woods while I penetrated into the open burnt lands. I found there several mixed flocks of Warblers & Sparrows feeding on the ground among the stumps and logs. In one there were several Grass Finches and a *D. palmarum*; in another about twenty *D. palmarum*, two *D. tigrina*, several Grass Finches, and a Chipping Sparrow; in a third two *D. palmarum* and a *D. blackburnii* besides some Grass Finches. It was interesting to see the Wood Warbler in such company & surroundings. I shot both the *D. tigrina* on the ground.

In this open land I found a nest of *Peis odon* in a beech stub not over ten feet above the ground. She I entered and emerged from it. I shot her and on dissection found that she had laid all but one or two eggs. There were chips scattered over the ground under the nest over a space of a foot square.

Late in the forenoon I entered the heavy timber where I shot on the 12<sup>th</sup>. These woods were silent and nearly denuded to day. I found one small flock of Warblers, however, containing several *D. maculosa*, 2 *D. ceruleus*, several *D. virens* and a *Monticola varia*.

Hearing a Grouse drum I crept silently towards the

spot and finally stopping to look around my eye caught the flick of his wings just as he began to drum again. I saw the wings through this performance but not the bird himself until after he stopped. Then I made him out sitting in a slouchy attitude yet rather erect, but not with his head & neck stretched up. After about five minutes of inaction he erected his body perfectly straight, settled down on his ~~abdomen~~ and extended his wings holding them motionless for a moment. Then he struck the air three or four times in the usual manner, when, supposing him to be exhausted in his performance, I moved slightly and he instantly stopped and folded his wings without finishing. After another pause of about five minutes he drummed again. I saw him distinctly through it all. His back was towards me each time. The entire performance was as I described it in the "Am Sportsman" years ago. After it was over I moved slightly intending to shoot the bird but he heard me and at once flew.

1888

Oden, Michigan.

May 16 Clear and cold. Ther. only 44° at noon. Haze from last night.

I awoke at daylight this morning and heard a dove calling on the water; also a Gull (*S. argentatus*). A Song Sparrow was the only singing bird. Probably it was too cold for the Robins of which I saw several about the house later in the day.

After breakfast Dwight went to Petoskey leaving me alone through the day. He took the train out to Harbor View and on the way saw several Scarlet Tanagers along the beach. One, startled by the train, flew upward when it was instantly seized in mid air by a small Hawk probably *A. fuscus*.

Not being able to get my trunk and having a bad cold I kept in or near the house all day & did not shoot at all. Took several short walks and saw several *D. palustris*, one *D. tigrina*, a yellowish *P. anglicus*, which I finally shot, several *Hel. peregrina* and a number of *D. coronata*. The Tanager and most of the Warblers were in the open on the ground. The Tanager late in the afternoon spent one or two hours in a ploughed field in front of the house. He hopped almost precisely like a Robin.

The woods are perfectly leafless, the maples blossoms just falling, Spring Beauty, arbutus, and dog-tooth violet in bloom, willows heavy with pussy's, a shrub like an elder the only thing showing green leaves.

On the edge of the clearing I started a Grouse from some blackberry bushes. Several nests have been already found here, one, yesterday, containing five eggs.

A man saw about 25 Pigeons this morning in some

Since woods about a mile from me.

After sunrise I went to look in woods along the railroad track. Hairy Woodpecker and Rufous Kinglet (*Regulus satrapa*) and Towhees singing. Several mice (*Peromyscus*?) running on ground in and out of holes on the edge of a field.

The first of these is the fact that the  
the country is a very fertile one and the  
the soil is very rich and the climate is  
very healthy and the people are very  
industrious and the country is very  
well governed.

18 Cloudy with frequent showers, Wind N.E. Gales  
but still not at all a chilly or raw day.

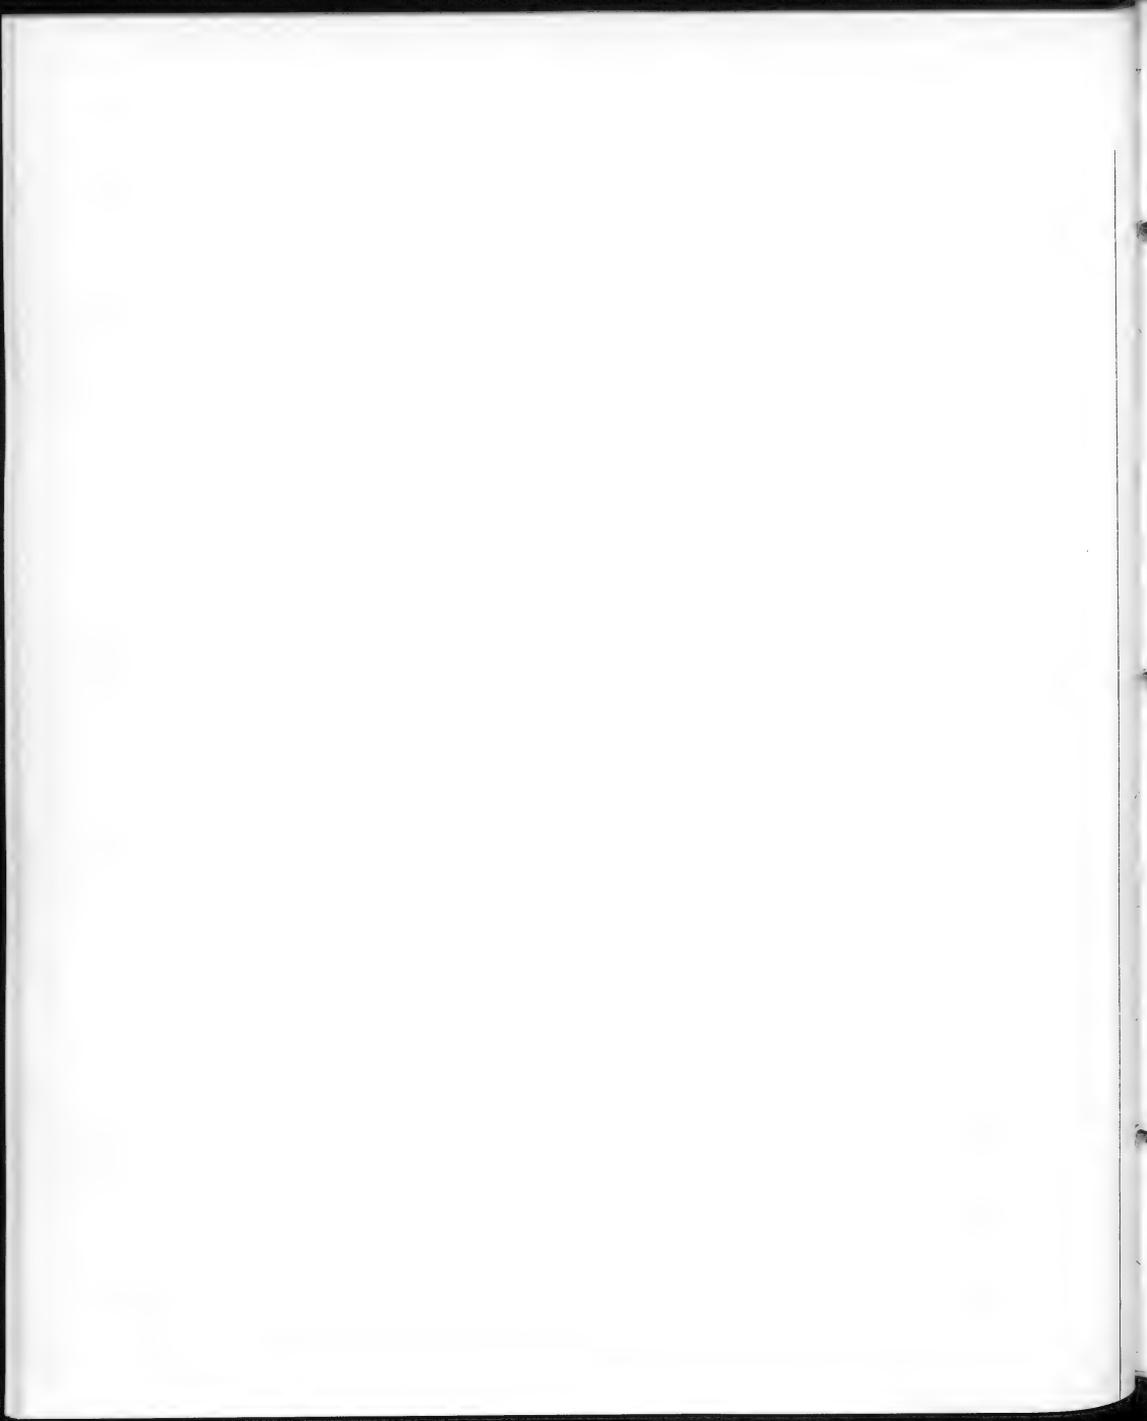

Spent most of the day in the house & did  
a short walk in the morning along the shore past  
the bath house, a fairly long tramp late in the  
evening through the affluents clearing opposite W.  
mid a heavy flight of migrants but the flight  
the flight of yesterday had passed on and no  
used to be in the woods & about  
about human species such as *M. virens*, *D. maculosa*  
*undata* etc. saw only two *D. pal.*

in some hummocks, W. Wood Thrush  
in willow thick in hills in an arbor vitae wood  
near the station, numerous fled in the dense hills,  
the combination of songsters, Tree Sparrows, Golden  
Robbers, Junco, Winter Wren, and Song Sparrows  
in dense woods on the same  
is about a thrush hummock as compared  
with ground, flood & seasonal conditions in the past.

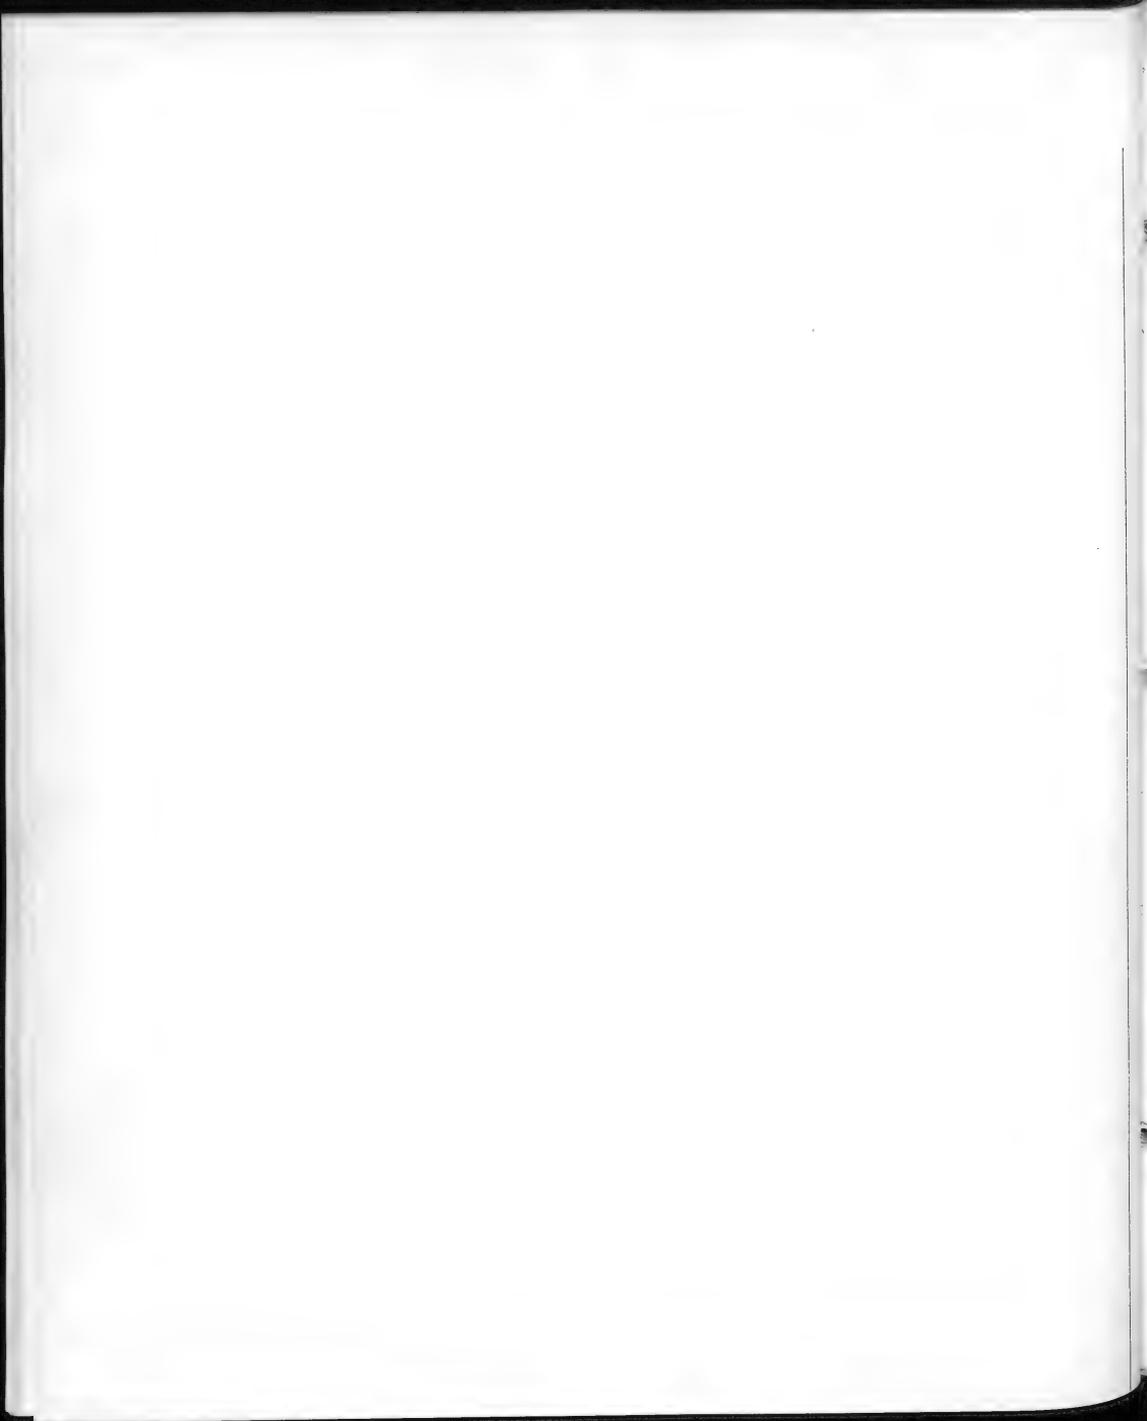

was again struck by the silence of birds here  
today with its mild, soft air, gentle showers and  
a

Eden, Wisconsin

May 21

Plover nest, 1/2 d. empty, used this with light, there were  
 a numerous mass of birds today, mostly in trees,  
 in nests, some seen in nests were abundant, but  
 not have seen any to sight banded individuals  
 of the same species alone. Most abundant were  
 maculosa and h. coronata <sup>stricklandi</sup> black-bellied, <sup>stricklandi</sup>  
 s. virginica, s. arcticus, h. pennsylvanicus h. ruber  
 s. undulata especially abundant, H. purpurina fairly so,  
 first the entire day swooping coming in out  
 is done, although I was on my feet nearly the  
 whole day and probably walked six or eight miles  
 did not once get three hundred yards away  
 from the house. The most of my birds were there  
 near the bath house and behind the barn.  
 Starblers were in large mixed flocks precisely as in  
 autumn. Several flocks contained at least 100  
 birds each. All the species were engaged most of  
 the time in catching flying Diptera. They kept much  
 in the tops of the tallest deciduous trees yellow  
 pines & hemlocks especially.

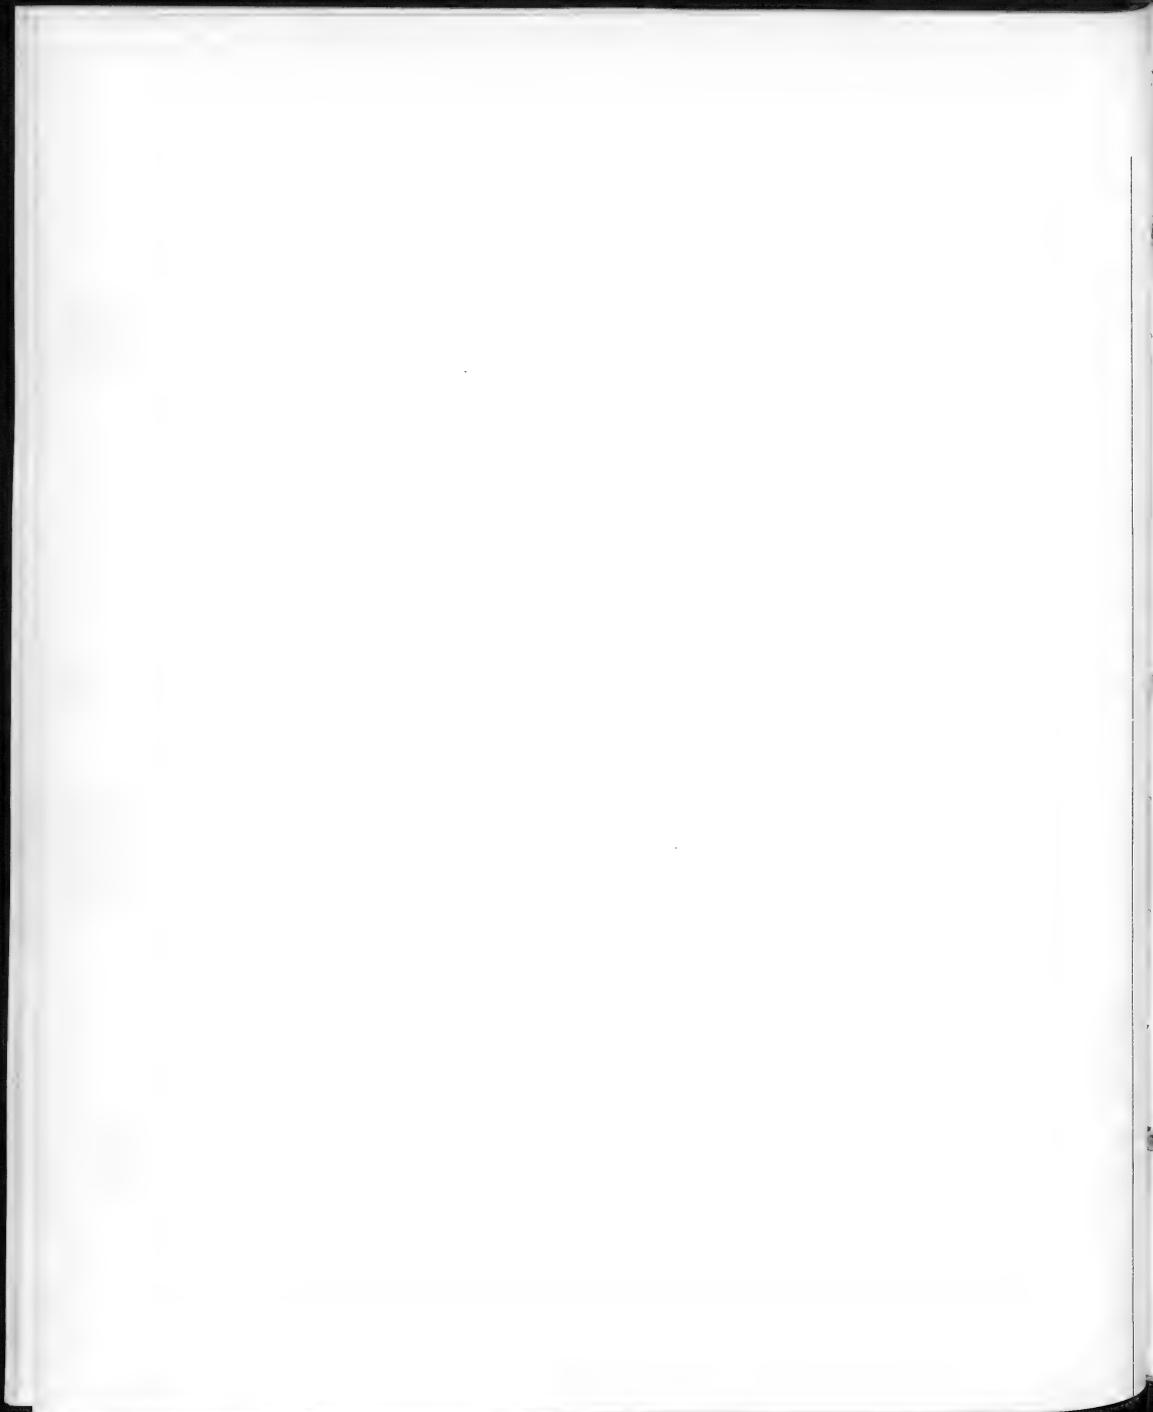

In the spring heard a grouse drumming &  
 following the bath I walked by within ten yards  
 of him. He was sitting on a mossy log when I  
 first saw him his head turned so that his bill  
 pointed back over his tail, his general posture  
 something, his feathers ruffled. I sat down in full  
 sight of him. He remained this attitude about  
 the whole of the time for nearly two minutes. Then  
 he stretched up his neck & began to jerk & wave  
 his wings. Then he spread them on the ground  
 & the next instant flew. A ♀ was seen only once.

1888

we went down to the bath house grove after breakfast we found the trees there literally swarming with Warblers and vireos. After shooting a number I crossed the railroad to the swampy thickets opposite the station and there proved to be also filled with hundreds of birds chiefly Warblers. These numbers were fairly confusing. I have never seen anything to equal it before. A list of the different species would include almost every thing that we have thus far found here besides several new arrivals but most numerous & conspicuous were D. maculosa, D. carolinensis, H. peregrina, D. coronata, D. blackburniana, My. canadensis, M. pusillus, Petoplasa, and his olivaceus. H. ruficapilla had decreased markedly since yesterday and I saw only a few D. palmarum. There were several Mourning Warblers singing and during the day D. shot a pair of D. tigrina.

We spent the entire day shooting coming in only for dinner. I did not even go over three hundred yards from the house.

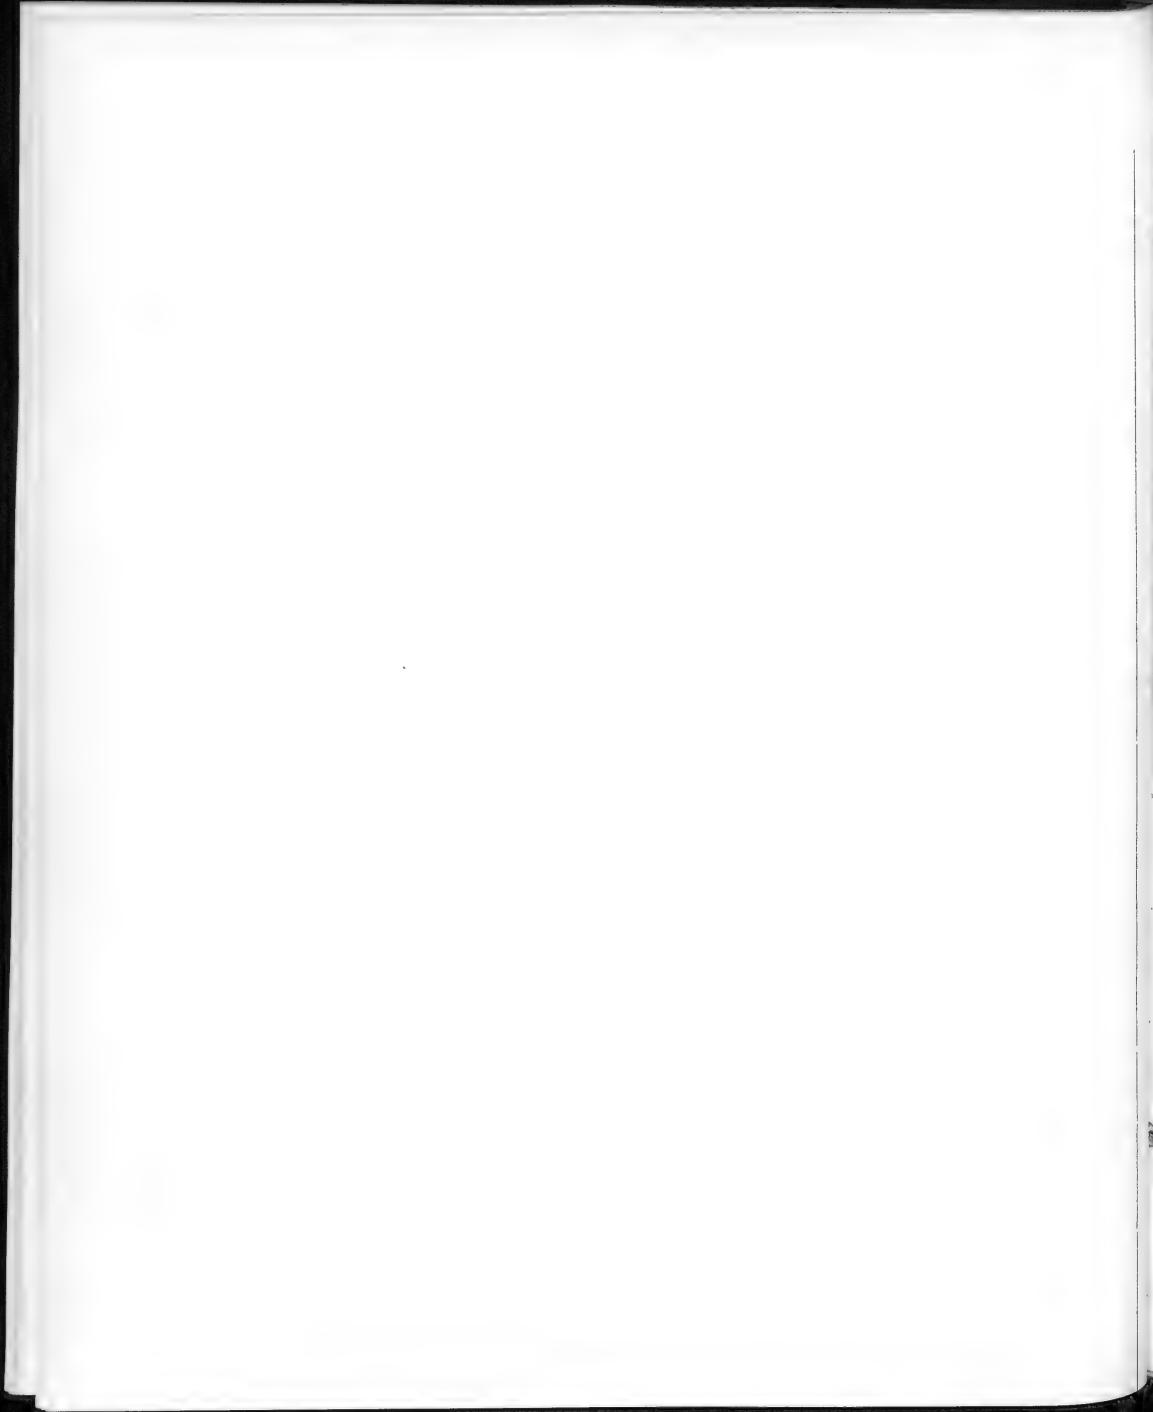

Odum, Michigan

with summer here.

After spending two hours or so in the grove by the bath house and in the thicket opposite the station I started back into the heavy timber to the north in search of Pigeons. Penetrating in about 500 yds. I came to a picturesque ravine shaded by noble old hemlocks with a brook flowing swiftly beneath. There were many small birds here but nothing of special interest except a Thrush which I took to be T. mustelinus but which I could not find although I shot it down.

I was following up the brook and had nearly reached its source in a springy swamp when a ♀ Pigeon started from the ground and alighted in a sapling about 15 ft. up. I crept cautiously within range and shot her getting a fine specimen (which I afterwards gave to Dwight in exchange for a ♂ which I shot next day at a nest which he found to-day.)

As I came out of the woods on my return a Contopus borealis was sitting on the top of a dead hemlock at least 150 ft. above the ground.

1888

Olen, Michigan.

May 24

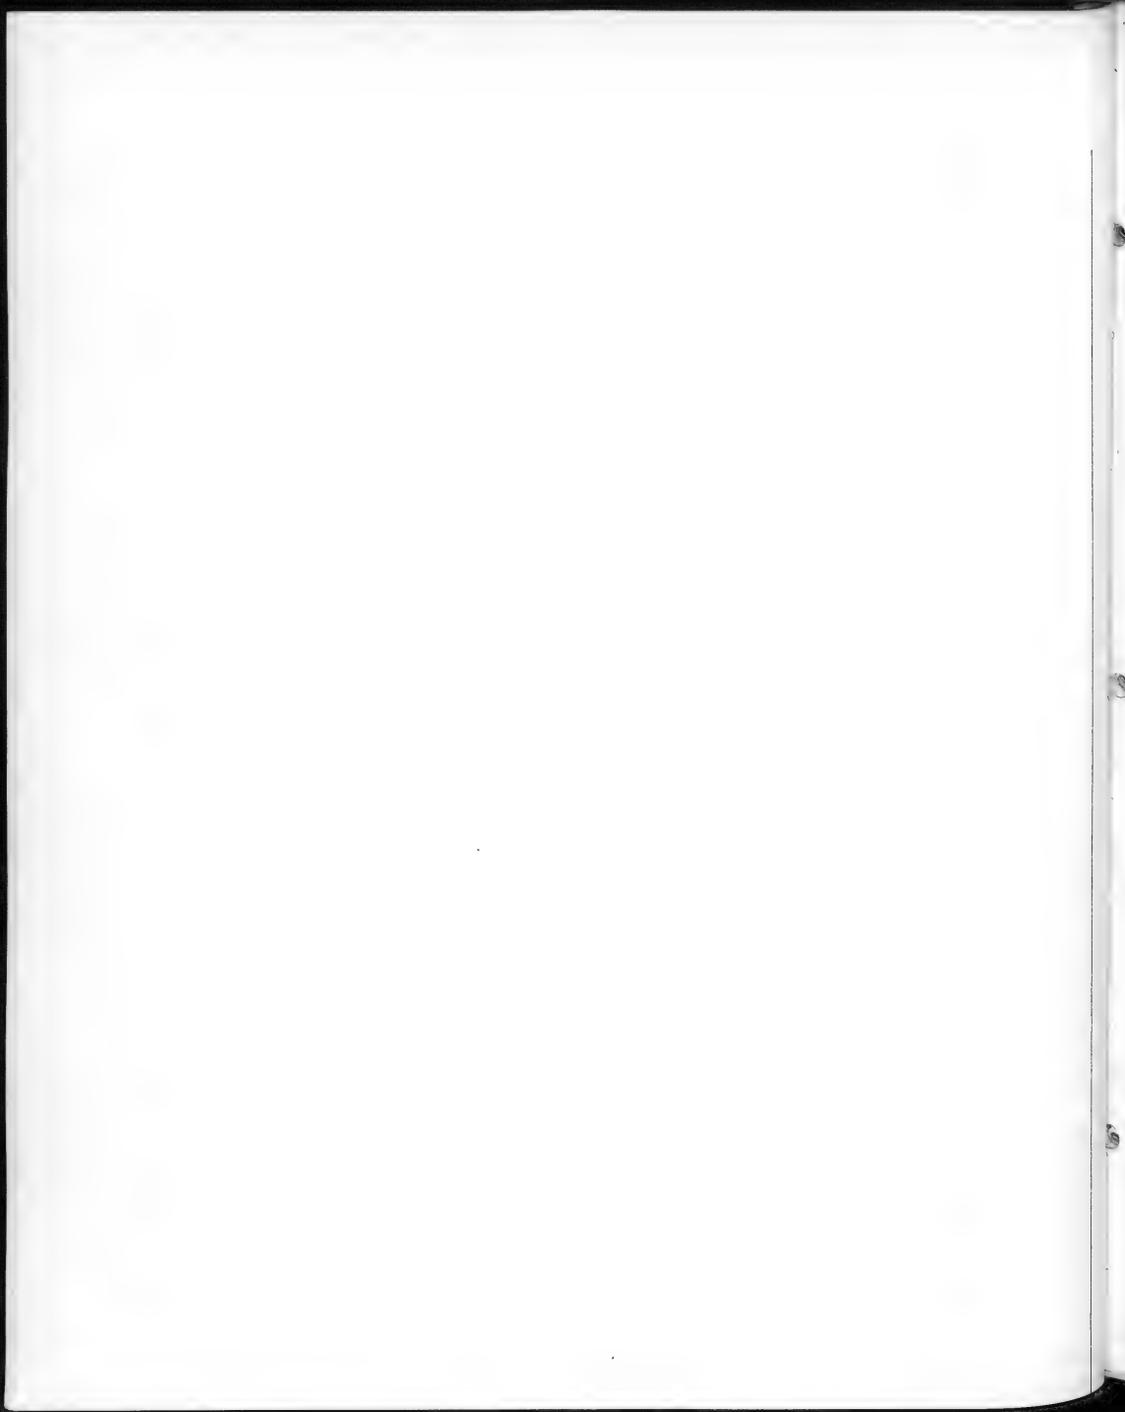

Clear and hot. Wind N.W. but light. Ther. 78°.

Started out at 7.30 as usual and spent about two hours in the woods and fields near the house, most of this time in the woods to the south along the lake shore. The great flight is about over although there were a few small flocks of migrants in most of the coverts. Dwight got a ♀ *Vireo philadelphicus* in the grove by the ball house and I saw very soon I saw another in the woods to the south. In these woods I shot two ♀ *Dend. tigrina* and a *Hel. peregrina*. Wilson's Black-caps and Canada Warblers were comparatively scarce. Migrating *D. maculosa* still numerous but nearly all were ♀.

There has been a marked change in the vegetation since yesterday, many of the deciduous trees in the woods showing a decided tinge of green this morning. The birches and poplars are still hung thickly with catkins. The white bellflowers are in their fullest perfection. Some purple violets out to-day. The dog-tooth violet still in bloom.

About 10 a. m. started with D. to visit the Pigeon's nest which he found yesterday. It was on the stout horizontal branch of a hemlock about 12 ft. but perhaps 50 above the ground. There was no bird on but as D. was preparing to climb the tree a ♂ Pigeon started out of the next tree, a hemlock also. He flew a few rods and alighted high up on a horizontal hemlock branch where I shot him. He flew nearly thirty yards before coming to the ground & when he finally reached it struck against an upright dead prong tearing open his breast, or rather crop which was filled with sprouting beech nuts.

Upon reaching the nest D. found it empty & fouled with dung. At about the same time a young Pigeon

Oden, Michigan.

1888

May 25

Cloudy most of the day with occasional intervals of sunshine.  
Wind N. E. Rather cool.

After inspecting the coverts about the house this morning and finding them nearly deserted we took boat and started for a day on the lake. Crossed first to the great island. A Pine Warbler singing there; also many *D. virens*, *Parula am.*, *Junco naevius* & *Vireo olivaceus*. On the further side we started a flock of *Hedymeles* (*M. serrator*) which came past us down wind at great speed. I selected a drake which started off at my shot and finally fell dead 100 yds. or more to leeward. He proved a rather ragged & worthless specimen not in full plumage.

Crossing to the mainland on the east shore I shot a Redwing among some willows. It is the only bird of the species that we have seen here. A Swamp Sparrow was singing in these willows.

Further east we landed at a log cabin and went back a little way into the woods. No birds of any interest saw fresh deer tracks. Just before landing I saw a muskrat peep out among some logs & draw back again.

Skirting the shore a mile or more further we heard many Water Thrushes, Canada Warblers, Parulas, an Olive-back & several Hermit Thrushes & many Red eyed Vireos. Reaching the mouth of Pickard River we rowed through to Pickard Lake. It proved very like Crooked Lake but wilder, nothing but woods on every side the trees along the shores chiefly arbor vitae, <sup>or larches</sup> with a few Spruces, further back on the higher ground Beeches, maples & white pines. We cut lunch here sitting in the boat. Loons, *Rana palustris* & *Alyas* singing on every side. A Swamp Sparrow trilling & numerous Water Thrushes

warbling. A *Myiarchus* calling among some ash stubs; Jays screaming in the distance. In the water numerous small minnows coming to savor the crumbs we threw to them. A Cray fish or two crawling on the bottom under the boat. Several *Ardea herodias* fanning their slow way across the lake above. A *Buteo pennsylvanicus* screaming.

Hearing a Grouse drum several times apparently near at hand I landed and went in search of him, supposing him to be not over 50 yds. off. I went nearly 100 yards through the worst cedar vider swamp I ever saw before I finally discovered him sitting on a large pine log. He was about midway of the log and sat so still that I looked at him for several seconds before I could be sure that he was really a Grouse or indeed a bird of any kind. Finally I shot him. There was a great quantity of droppings in two places on the log. I had a hard task to get back to the boat carrying both gun and bird and upon these occasions I slipped off a slippery slimy log & into the ice cold water beneath.

In the way home we had only a very few birds, a Crow, five Golden-eyes, and a Broad wing Hawk. The latter I saw pounce down into his log heap behind the bath house. As we got opposite the spot he flew up & alighted on a stub where I shot him. His legs & feet were gummed over with a black, sticky substance which I took to be pitch mixed with crock from burnt stubs.

In the shallow water near shore we saw a large dead Salamander & a live fish which I took to be a wall-eyed pike. The latter was only about six inches long.

Oden, Michigan

1888.

May 26

A.M. cloudy with dense fog. Afternoon cloudless  
the air very clear and sparkling. Weather cool.

After breakfast took a turn about the clearing  
and shot a pair of Wood Thrushes in the  
woods near the bath house. Also a Mourning  
Toucan which I gave to D.

At 9.30 started by boat for the Conway shore.  
The fog was so thick that we could see only  
a few rods ahead but a brisk wind from the  
S.W. gave us the direction and after a tedious  
pull a high, heavily timbered ridge loomed up  
ahead and we found that we had made  
the very spot for which we had aimed. The  
shore was steep with birches and hemlocks reaching  
out over the water, above and behind them a  
grand old forest of maples, elms, beeches &  
basswoods many of the trees over 100 ft in  
height and 3 to 5 ft. in diameter. Their trunks  
rising without a branch for 50 to 70 ft. their  
tops spreading & umbrella shaped. The ground  
beneath was perfectly free from undergrowth  
& but little encumbered with logs or fallen trees.  
The general character of these woods was closely  
similar to that of the forests of western No.  
Carolina. They were literally alive with birds  
which, for the most part, were in flocks in the  
tops of the tallest trees from which our  
heaviest 12 g. charges often failed to bring  
them down. A high wind was blowing but  
it was impossible to distinguish the different  
species with any certainty & we were forced to

we at most of them and shoot them at  
sundown. By shooting freely and hearing their  
songs we found that there were numerous hirs  
thraex, Parula one, D. blackburnii, D. virens,  
D. striata and D. carolinensis with a fair sprinkling  
of D. castanea, D. striata, Hela peregrina & Myiodynastes  
carolinensis. (the latter in the highest tops at times).

Wood Thrushes were very numerous here. We must  
have seen & heard at least a dozen. We also  
saw three Vitta carolinensis, two Certhia leucotis  
a pair of Certhia one and a few Sphyrapicus & Picus  
colinus and a ♀ Hypotamias (which D. Hart) junco  
and Prospeks were hugged on way back.

After lunch we explored a low-lying rather  
swampy portion of these woods. There were more  
hemlocks here and many gigantic elms. In  
one of the latter in a fork about 70 ft. up I  
discovered the nest of a Buteo borealis. As we  
approached the spot one of the birds began uttering  
its curious gasping cry which D. compared to the  
whining of a horse. It flitted from tree to tree  
keeping out of shot. The other bird was on the  
nest from which it started when D. struck the  
base. It alighted within thirty yards & seemed  
to have little fear of us. We could not climb to the nest.

In a swampy place at the very foot of a large  
hemlock I found the nest of a Crow. The bird  
flew from it as I brushed past alighting a few  
yards off - moving. When I returned later she flew  
at 15 yds. distance and sped away with best  
to light among the trees. 10 eggs were cracked by  
the bird's hurried flight probably. In the way home  
about sunset I shot at & missed a Buteo borealis  
which was sitting on a stub of the horn.

Oden, Michigan

1888

May 28

Cloudy all day with W. wind. Cool, then 50°.

Off at 8.30 by boat, going directly across the lake past the island and into the cove at the mouth of the Minichukia River. This cove we found to be nearly a mile long by perhaps 50 rods wide. Most of it was really flooded meadow bordering the river which winds through it. Rising above the water were beds of cat tails most of them crushed and water-logged. One shore of the cove was low, swampy land covered <sup>sparsely</sup> with stunted larches & arbor vitae; the other was more abruptly with a belt of alders fringing the water's edge & behind and above these a grand old forest of elms, beeches, and rock maples. The larch swamp was flooded for some distance back among the trees. Rising above the water in places were beds of Cassandra ciliolata & Andromeda polyfolia, the former being with its white bells, the latter luffed with purplish blossoms. There were several floating bogs or islands most of them grassy but one having a few larches & alders and resembling closely the floating island in Umbagog.

Upon first entering this cove we found it alive with birds. A Cat Bird singing at the entrance, Red-wings scattered about picking on the tops of the bushes or walking on beds of floating vegetation, Swamp Sparrows billowing on the islands, Browned Grackles, and Tree Swallows among the larches and Barn Swallows, Tree Swallows, & Chimney Swifts in a great swarm hunting insects over the water. A shot fired

at a Grackle was immediately followed by an outcry from several Carolina Parakeets scattered about on the different islands. I landed and tried to find them but in vain.

We spent most of the forenoon shooting Blackbirds and Swallows & during this time made two interesting observations. The first was the identification of a strange cry which we heard at frequent intervals in several directions. It was very like a Yellow-billed Cuckoo's but hoarser a loud coo-coo-coo-coo, cooa, cooa, coo-a. The final syllables guttural & long drawn. This cry we have traced to a pair of Thick-billed Grebes which were doubtless preparing to breed in the floating beds of dead cut turks. The other observation was as follows: We saw a ♂ Linicatus cinereus fly to its nest in a small Cereus & spreading its wings strike downward with its bill. In the nest we could see another bird which we took to be the ♀ Grackle. On approaching nearer however, we started it out when we saw that it was a Crow. It climbed to the nest & found in it a single Grackle's egg broken in two with most of its contents gone. We also saw here an Eagle & an Osprey. The nest of either one or the other occupied the top of a dead tree near the shore.

After lunch I landed on the high shore & took a long tramp through the woods. Many small birds singing nearly the same kinds as on the 26<sup>th</sup>. Wood Thrushes very numerous. One which I wing tipped was pursued & caught by a Cinnamon Teal when out a large inch in the back of its neck & gravely killed it. I had to throw a stick at him to make him go. On the way out of the cove I heard I shot 4 ♀ Trachinotus in alders over the water.

Oden, Michigan

1888

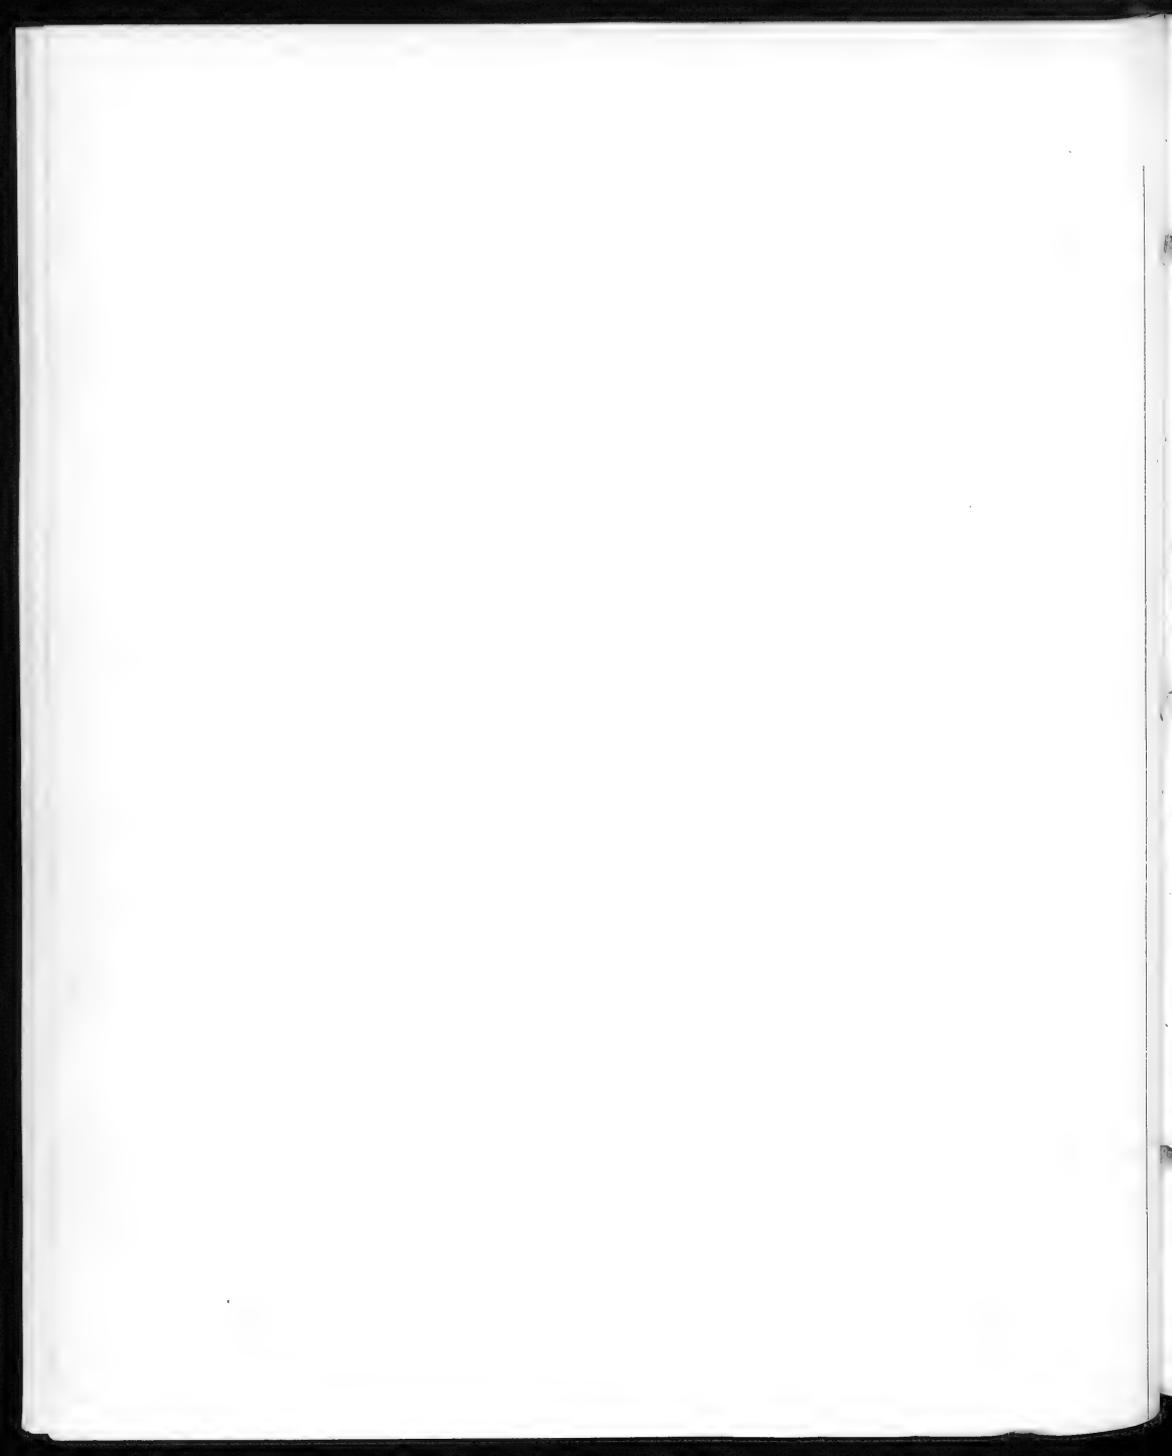

May 28

Clear and cool with strong W. wind.

After breakfast I took a short walk with my gun and shot three small birds a My. canadensis & D. coronata by the bath house and a D. G. phillad. in the upland clearing opposite the station.

Shortly after I had returned Dwight came rushing in after his gun he having seen a pair of Pigeons in the swamp near the bath house. He started after them at once and found them just where he had left them (although a train had passed within 50 yds. of them in the interim) sitting in the topmost branches of a tall maple. Each selecting a bird we fired together. Both Pigeons went off in different directions, each severely wounded. Dwight's bird crossed the railroad & was lost to sight in the swamp beyond but following its course we quickly found it, a beautiful ♀ stone dead and without a blood spot or missing feather. My Pigeon went only about 100 yards and then fell apparently ~~stone~~ dead on the edge of the wood fall but although we spent the entire forenoon searching the ground inch by inch we failed to find it. While thus engaged we saw a pair of Brown Thrashers the first observed here later in the day. The ♂ was in full song in the thickets opposite the station.

At sunset night-hawks came about the house sweeping through the dooryard close to the ground just as they do in Maine.

Oden, Michigan.

1888

May 30

Clear and rather cool. Wind W.

Spent the forenoon in a fruitless quest for Pigeons. Entering the old woods beyond the hillside clearing we penetrated through them coming out on the state road.

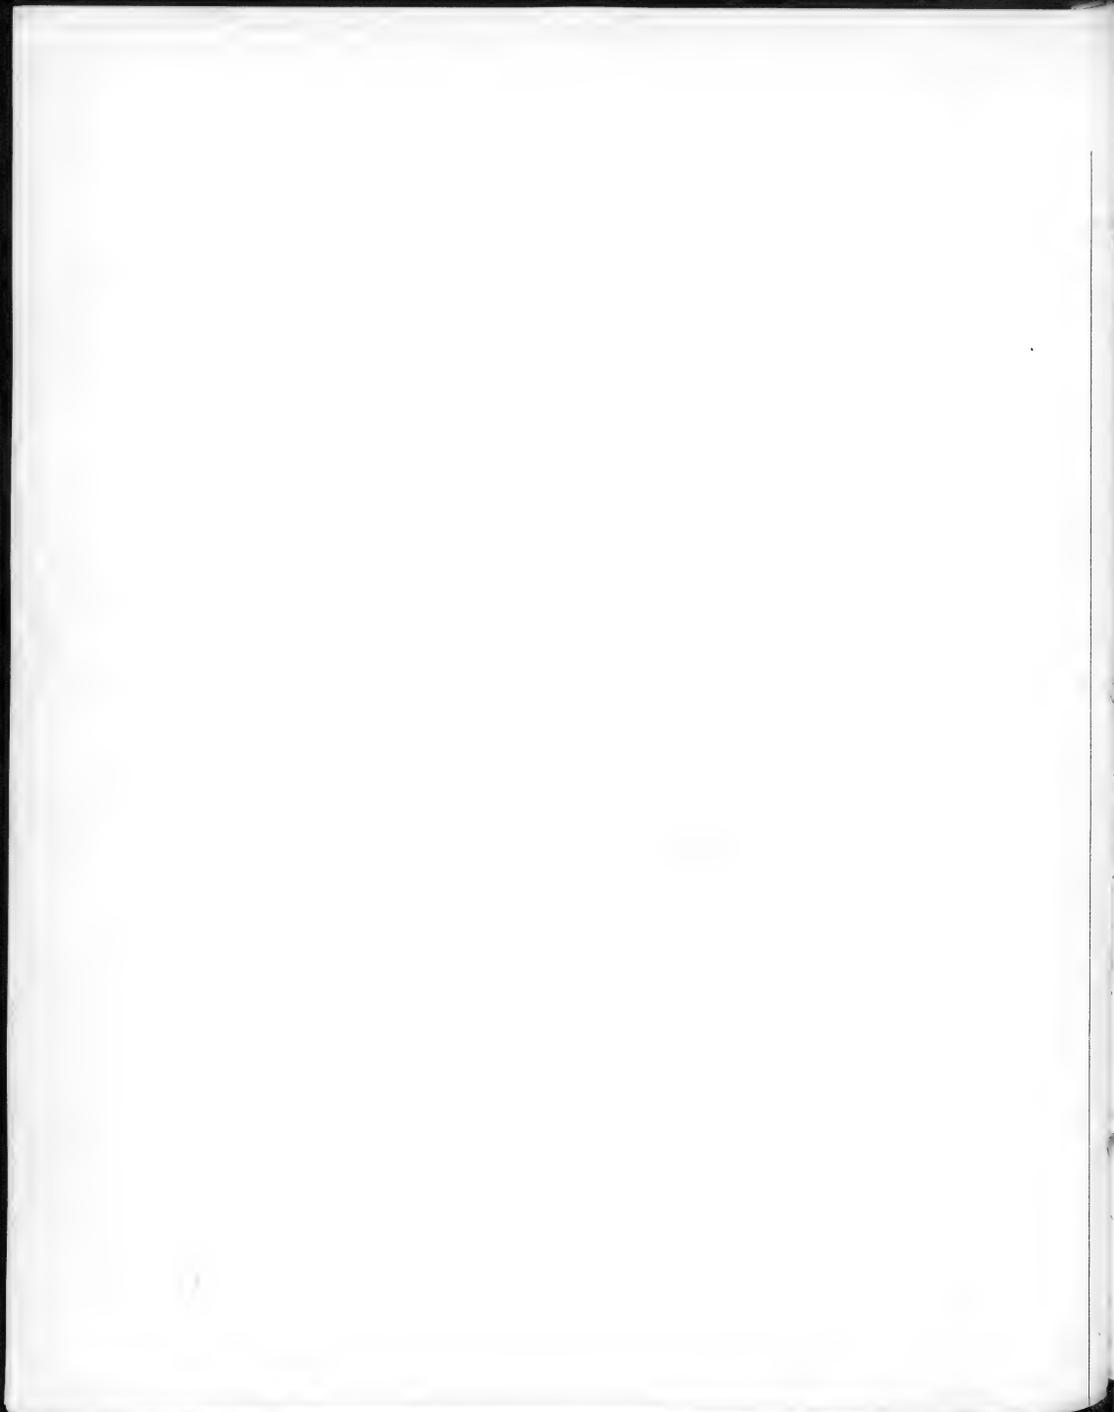

Dwight found the nest of a Hermit Thrush with four fresh eggs one distinctly spotted with brown. I shot one of the birds.

In some hardwood timber near the State Road I found a nest of *Hydunlos leucovirens* in a remarkable position viz in the extreme top of a leafless beech fully 40 ft. above the ground. I took it, at first, for a Pigeon's nest but as I was looking at it the ♂ Grosbeak entered it with a twig in his bill which he proceeded to put in place.

Heard a *Fardus fuscus* singing in hard wood growth near a wood path but failed to get a shot or come a fair sight at him.

In the afternoon as we were packing a *Colaptes borealis* appeared in the clearing within a few rods of the house. I heard him calling and at once went in pursuit finally killing him on the telegraph wire over the railroad and with my second barrel shooting a ♀ *Geothlypis phibadellia* that started up from the ground and alighted in a fallen tree top.

Note We left Oden early in the morning of May 31<sup>st</sup> and went directly through to New York without stopping. Thus my journal of our trip in Michigan ends with the above date.

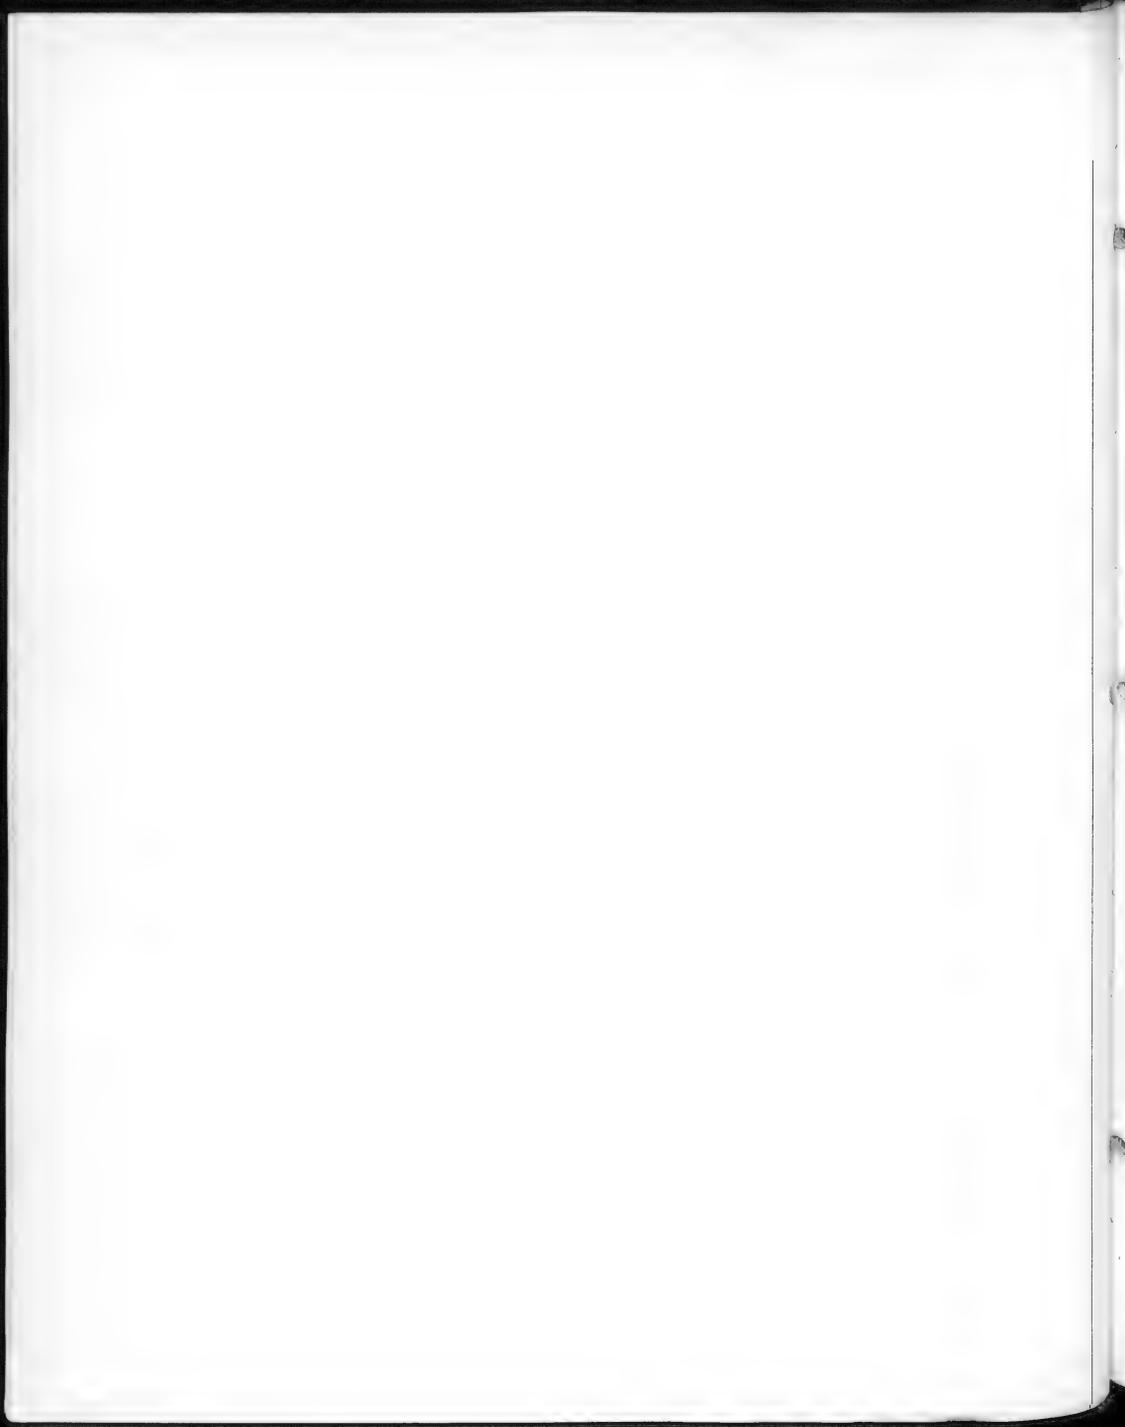

Birds noted in Michigan May 1888 by W. K. & J. D. Ja.

- Sphyrapicus* May 26 pair copulating.
- Piceto bor.* May 26. nest ♀ sitting - rest of assumed.

Concord, Massachusetts.

1888

June 8

Clear and hot; wind strong from S. W.

To Concord by noon train with Denton, our object being to find some Bobolinks' nests. Getting my boat at the Manse we started down river at 1 P. M. Just below the bathing place found a Kingbird's nest which held one egg on which the bird was sitting. A little further down D. discovered a Yellow Warbler's nest set at least 25 ft. up in a maple. It was finished but empty.

Opposite "the tent" a Warbling Vireo was singing in the cluster of maples & poplars where there has been one for the past two seasons (although in 1886 I shot either one or both birds) and we landed to search for its nest which D. finally found by climbing to the top of a maple into which I saw the ♀ fly several times. It could not be seen from the ground. It held only one egg which we left.

Upon first landing and before finding this nest we saw a ♀ Bobolink alight on a tall weed and after looking about a moment pitch down into the dense grass of a mowing field. D. ran to the spot & flushed her under his feet and I, following him more slowly, found the nest which contained a full set of six eggs.

We next landed at the rock where I shot the Prothonotary in 1886 and searched the neighboring thickets for nests finding only a Cat-bird with 4 fresh eggs, a Least Pewee and Yellow-billed Cuckoo singing besides numerous Yellow Warblers. D. killed a black snake which we cut open finding in his stomach a young Song Sparrow, fattened & but barely large enough to fly.

Our next landing was opposite "Hunts pond". We first beat the meadows down river seeing several Bobolinks but finding no nests. Returning D. flushed

a ♀ from her nest which was within 30 yds. of the boat & less than ten yards of the spot where I found a nest with young last year. Doubtless it was the same bird. This nest was in a very open situation & was in no way concealed. It held five eggs.

After this we beat the high bank ridge up to the oak island without finding a nest but on the return I stumbled on two on the inner side of the ridge, one a little way out in the meadow (but still on dry ground) among short fine grass, the other on the edge of the ridge among royal ferns. The ♀ of the latter was within two feet of me.

All the time we were on this meadow a Britton was jumping at frequent intervals. He saw few swallows or swifts. There were several pairs of Orioles & we found two nests in the river maples. Yellow Warblers more numerous than last year. A single Spotted Sandpiper, several Flickers.

At the Mann Vireo flavifrons (no V. gilvus heard there) Empidonax minimus, Tyrannus carolinensis, Lialia vialis, Mniotilta migratoria and Melospiza melodia. ~~The~~ Phoebe and Cat-birds apparently missing. Upon looking at the apple tree where the Red-start's nest was last season I was surprised to see a new nest in the same fork of the same branch. I was still more surprised on starting the bird off to find that it was not a Redstart but, on the contrary, a Least Flycatcher. The nest looked rather weather worn & was perhaps the old Redstart's nest made over.

Red wings rather scarce than last year along the river. Houstonia and white violets in perfect masses in places on the meadow.

1888

Belmont, Massachusetts.

June 9

Clear and hot; wind S. W.

to Prospect St.

At 11.30 A. M. started by buggy for Prospect St. with Denton our chief object being to search for nests of the Prairie Warbler. At the foot of Bassal Lane heard a Red-eye a Least Flycatcher & a Yellow Warbler singing in the oak woods, a Maryland Yellow-throat & several Swamp Sparrows in the swamps. From Fresh Pond to Belmont heard several Vireo gilvus, two V. flavifrons, several Wood Peckers & a Redstart. Brown Swallows entering the barn at the cross roads just beyond Black's. The neighboring sand bank a pepper box of sand swallows' holes but none of the birds about. No Bobolinks or Meadow Larks on the Belmont meadows.

Reaching the crest of the hill we tied the horse at the big apple tree in Prospect St. A Minnetta, a Nashville Warbler & a Cuckoo singing. Soon heard two Prairie Warblers & began to search for their nests. I soon found one in a barberry just over the wall on the south side of the road. It was a beauty but empty. D. found what was apparently the beginning of one on the north side and within ten yards a last year's nest, both in barberries. I shot a young Brown Thrasher here.

We lunched at the cold spring and then entered the cedar woods. Several D. virens & an Indigo Bird singing. Also a Pine Warbler whom mate, by great good luck, I almost immediately saw fly to the nest on which she was busily at work (at about 2 P. M.). It was in the very top of a tall, slender pitch pine very near the spot where I found a nest with young some ten or twelve years ago. Perhaps it was by the same birds. The ♀ of this nest was apparently as bright yellow beneath as the average ♂. I followed

to get into a field where she descended to the ground in search of building material. While watching her heard a House Wren singing in a neighboring orchard.

Returning to the buggy drove on nearly through the street and tied again near the lone pine. Two Prairie Warblers singing here, one in the spring given to the north. Searched for their nests in vain for nearly two hours and finally after losing all hope and when on our way back to the buggy I found one in a low barberry clump just north of the lane opposite the pine. The ♀ was sitting on a fine set of five nearly fresh eggs.

Within 20 ft. of the buggy I found a nest of Deer. Pennsylvania with two eggs. It was in a Poplar sapling but in a clump of grass.

Drove home by way of the mill-pond road and Navuley. On the hillside below the engine house heard a Meadow Lark whistling. One was seen there last year. Warbling Vireos and Orioles heard rather frequently as far down as ~~the mill~~. Denton heard a Bobolink near Brown's at the mill-pond road.

Northampton, Massachusetts.

1888

June 11

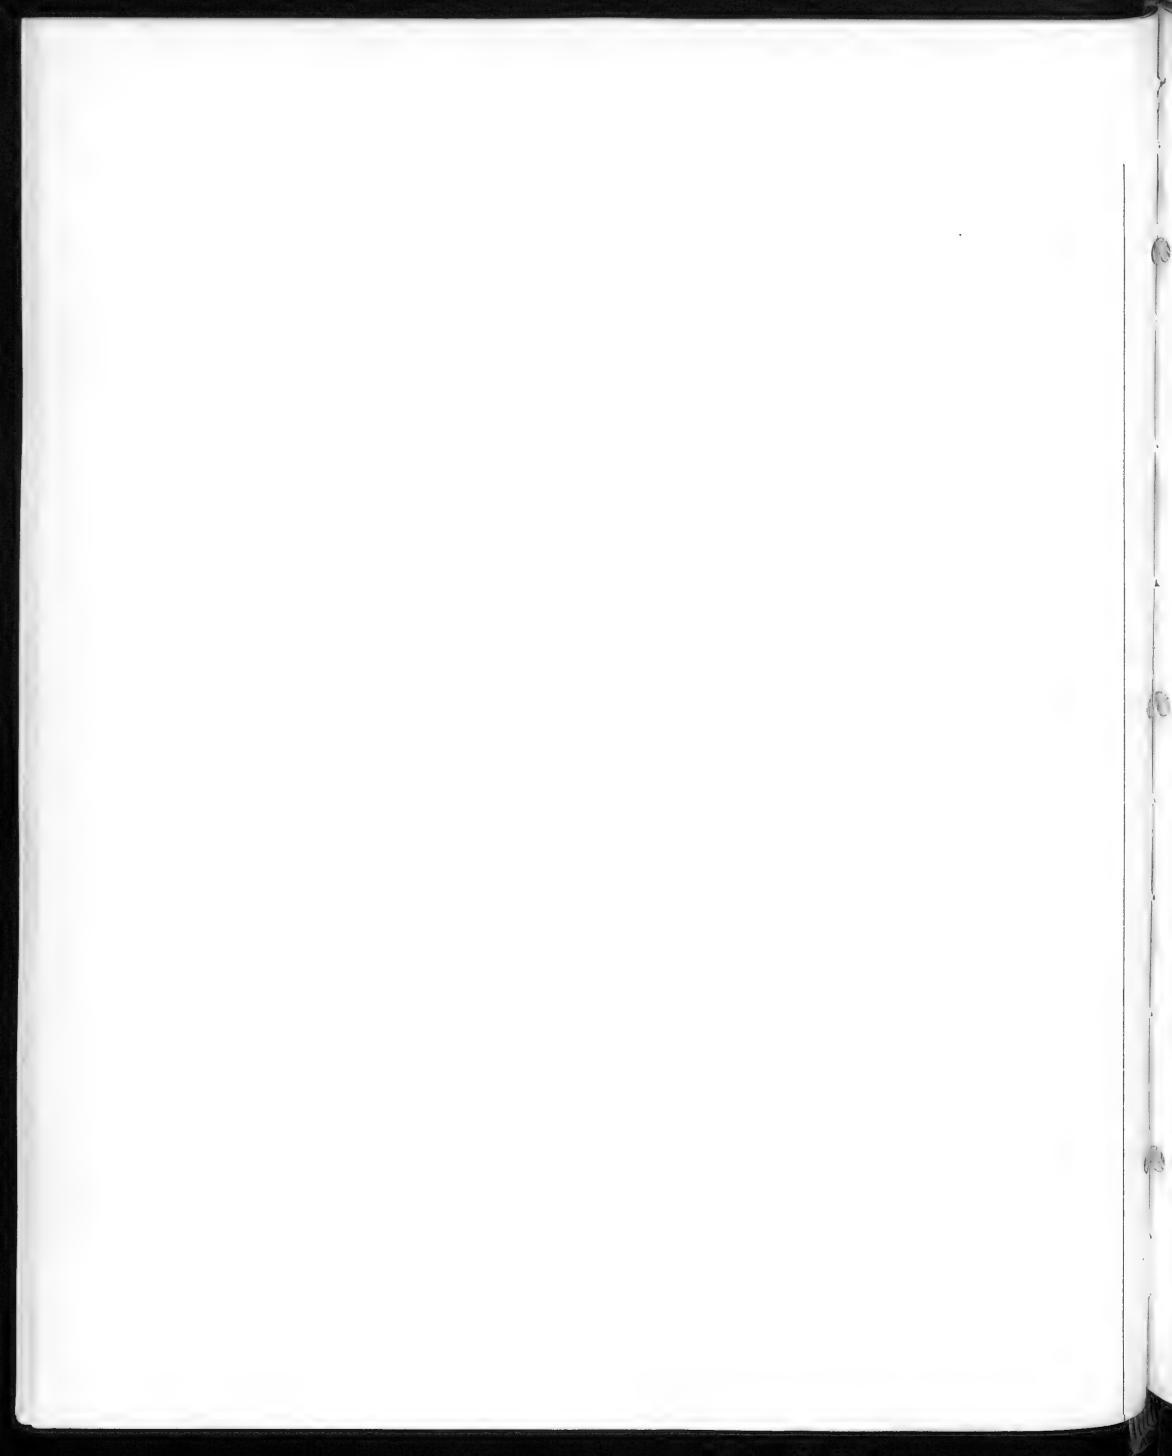

Clear & cool with strong N. W. wind

Both H. M. Spelman took the 3.05 P.M. train for Northampton. At Concord we were joined by J. W. Deacon who had gone up by an earlier train to get some nests which I found them on the 8<sup>th</sup>.

Reaching Northampton and taking tea at the hotel we hired a double-seated wagon and started for Bailey's. Martins & Night-hawks were hawking about over the town as we left it. Reaching the woods we found them silent & apparently deserted. In fact during the entire distance we heard nothing but a Robin & Song Sparrow or two. The trouble probably was that the evening was too cold for most of the smaller birds.

1 mile or so below Bailey's we met him on the road & taking him in preceded to his house. He has done little collecting this year but showed us a *Myiarchus* in the flesh, shot this evening.

After arranging to go out to his place to-morrow we returned to town. A Whippoorwill hooting near the roadside. No Hermit Thrushes, Mosquitoes numerous. *Asalea nudiflora* coming into bloom & very conspicuous & beautiful

Faint, illegible handwritten text, possibly bleed-through from the reverse side of the page.

Let this be done that please the man. He is

June 14

Rained hard most of the day. Late in the afternoon I took a walk down the lane that passes the house. A pair of Kinglets in the Spruce Swamp by the brook. A Swamp Sparrow singing in the meadow. Mosquitoes very numerous and furious.

Winchendon, Massachusetts.

1888

June 15

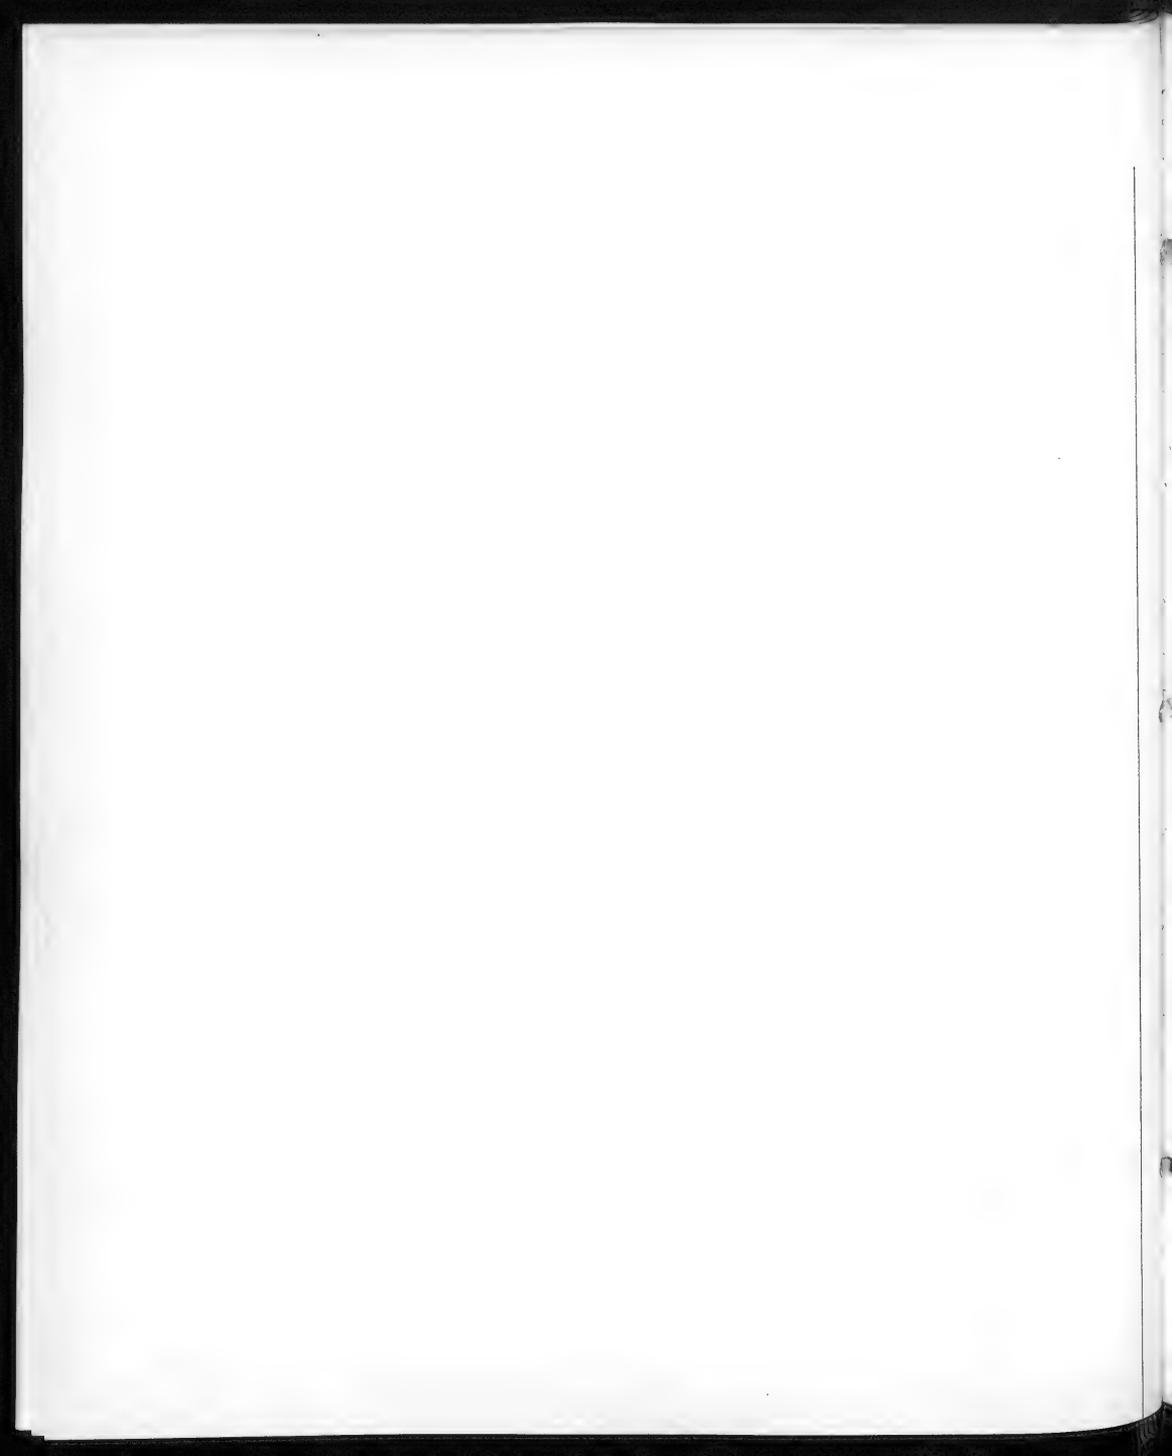

Morning clear and warm. Afternoon cloudy with heavy thunder showers about 5 o'clock and a heavy sunset later.

Off at 9 a.m. following the lane through the swamp and spending most of the forenoon in the wood-path beyond. The day was still and birds sang very freely. The woods were everywhere alive with them D. virens, D. blackburniae, and Turdus pallasi being especially numerous. Of D. blackburniae we must have heard at least 20 males in our piece of spruce woods - that along the wood-path. At the entrance to this path a D. maculosa was singing and Deaton quickly found its nest in a spruce sapling near the path. The ♀ was sitting on four eggs.

Among the taller spruces we searched long for a nest of D. blackburniae but in vain. Bailey, however, found the nest of what must be D. virens in a hemlock, not over 12 ft up and built directly against the trunk resting on small lateral twigs. It was evidently just begun - the mere framework of slender twigs & fibres outlining its intended shape. He said the bird got to it twice but could not make her out satisfactorily.

I noticed to-day that Warblers of several species, especially D. virens, D. blackburniae & Parula had their favorite singing stations; that is each & did. A Parula was singing in a certain hemlock all the forenoon.

Bailey & Deaton went out again in the afternoon but I felt too ill to accompany them. They got in just before the shower having found nothing. In the evening I shot a Night-hawk that was passing by the house.

Kitchendon, Massachusetts.

1888

June 16

Clear and cooler with high N. W. wind.

Started rather early and made a long day in the woods not getting in until sunset. Went through the lane, then north along the road with which it connects, then into a spruce swamp and home across country through an almost unbroken & for the most part very dense woods.

In the spruce swamp heard Black-b. vireos & a Kinglet but after spending a least two hours searching we had to leave the place without having found a nest of any kind. In some tall paper birches saw a pair of Hairy Woodpeckers which, as we approached, set up a great clamor. After searching for their nest I finally saw one of them feed a young bird which was perched on one of the upper branches of the tree. I heard other young calling but could not find them. The mosquitoes were very troublesome in this place & we had to build smudges wherever we halted for any length of time.

Penetrating through a grove of young white pines & crossing a pasture we entered a dense spruce woods where the trees stood so thickly as to shut out nearly every ray of sunlight. The ground beneath was smooth & carpeted with brown needles. Here we hunted and looked carefully for nests. Hearing a Kinglet chirp we went in pursuit & found a pair the ♀ of which was collecting material for her nest. In a very few minutes we traced her to it. It was some 40 ft. up in a large, dense spruce near the extremity of a branch under which it hung not unlike a moss nest. Bailey climbed to it & found it nearly finished. Both birds darted into & out of it as soon as he descended. In these same woods

Nest of  
*Regulus satrapa*

we found the nest of a flying squirrel. The ♀ came running out when Bailey shook the branches and sailing down struck at the foot of a spruce running quickly up, keeping on the further side but peeping around the trunk at us every time she stopped. Her nest was a round ball of strips of fine, inner bark, about as large as one's head. It was built on a horizontal branch of a spruce 20 ft. up & 8 ft. out. It was empty so I kept the owner for a specimen.

Flying Squirrel

After another straight-away tramp over a stiff ridge and across a swamp through which flowed a large brook we came to the base of a steep and very picturesque hill heavily timbered with old growth hemlocks & spruces. Along its base were several huge moss grown boulders & some fine ledges covered with rock ferns. The trees were fairly alive with birds among which I quickly distinguished by their songs Picus solitarius, Dendroica coronata, D. virens, D. blackburni, Parula amer., Regulus satrapa, Hel. ruficapilla, Turus hyemalis, and Carpodacus purpureus. Hermit Thrushes and Robins were also numerous here. In the swamp below a Tanager and Canada Warbler were singing.

In Kinglets were a pair the ♂ singing in an undertone, the ♀ gathering material for her nest. We watched them for nearly an hour but could not discover the nest although the ♀ must have gone to it several times. She was very quick in her movements and it was difficult to keep right of her without following her too closely. I saw her go twice into a spruce & thought she had the nest there but we climbed the tree & examined every branch without discovering anything. If the nest really is in this spruce the ♀ went only to the nest tree (a hemlock) for her material.

Northampton, Massachusetts.

1888

June 17

Clear and hot with light S.W. wind a perfect June day.

Rising early we got off about 7 a. m. while the grass was still drenched with dew, the thickets cool with the damp night air, the birds in full song. It was a wonderfully beautiful morning, the sky without a cloud, the air clear and with almost no haze on the distant mountains.

Crossing the "mowing" we made directly for the hemlock-slack hillside where we finished yesterday. On its steep slopes we quickly found all the birds left there last evening (except the juncos) and in addition a D. virens sitting in white pines thickly sprinkled with young spruces. We searched for the nest but could not find it and then went directly to the spot where we left the Kinglets last evening. They were both in the same hemlock but the ♀ was not building. We had not watched them over two minutes however when the ♂ flew into the spruce that he climbed yesterday and hopping nimbly out along a branch went directly to the nest which was suspended under a dense cluster of terminal twigs. It was lined and covered beautifully with feathers.

Our next find was the nest of a D. virens containing four young. It was placed low down (about 15 ft.) directly against the trunk of a hemlock (of about 6 inches diameter at this point) supported on a few dead twigs & in no way concealed save by its general resemblance in color to the bark & twigs. The young were only just hatched the ♀ was feeding them & betrayed the nest by flying to it as we were watching her. In a similar manner & not 30 yds. away we found the nest of a solitary tree with four newly hatched young. It was at the extremity of a long, slender, hemlock branch at least 3 feet

Nest of  
D. virens

Nest of  
Vireo

(June 17) the ground. The ♂ was in full song about 50 yds. away. Another ♂ was singing about 100 yds. off both yesterday & this morning. I found a newly finished by empty bird's nest which may belong to this bird. It was about 4 ft. up at the extremity of a hemlock branch. In this connection I should also say that we visited, early this morning the nest of V. solitarius found June 12. It held two eggs. ♀ not seen to-day; ♂ singing about 30 yds. away.

At about 11 a.m. we decided to leave these woods & go to those visited on the 15<sup>th</sup>. Striking across the swamp we climbed a hillside beyond and traversed for a quarter-of-a-mile or more a comparatively level, dry plateau covered with dense woods of young white pines interspersed with occasional spruces. Throughout these woods D. virens was everywhere so abundant that two or three ♂♂ were constantly in hearing. We noted also one D. coronata & one D. blackburnian. The former I followed for a long distance. It roved straight on through the trees singing once or twice in each & taking flights of 50 to 100 yds. at length. I got a fair shot but missed.

Reaching our destination we first visited the nest found by Bailey on the 15<sup>th</sup>. It was apparently finished—a remarkably rapid piece of work. There were no birds near it but I am very sure it is the nest of D. virens. The kinglets were soon discovered by the song of the ♂. The ♀ was with him & was building but I failed to discover the nest although I think I located the tree.

In a cluster of hemlocks on the south side of the path a D. canadensis was in full song. I shot him & then looked for the nest but failed to find it. There was absolutely no grass near the spot only small hemlock stumps & structures of raspberry. We reached the house about 4 P.M. & moved our things to Wiscandon in the evening hearing 3 Whippoorwills on the way.

1888

June 18

clear and very hot.

At 9 a.m. took a horse & buggy & drove to Wellington's Reservoir distant five miles from town to the N. As we passed through the main street of Winchendon heard an Oriole (*I. bottinorum*), a Warbling Vireo, several Least Flycatchers, and numerous Robins. Just side the town the road led through a comparatively level country with pastures alternating with woodland, the latter largely of deciduous trees with occasional groves of pines & now & then a dense body of black spruces & hemlocks. At length we reached the Reservoir a long narrow winding sheet of water evidently formed by damming a river. Near the outlet it was shallow & sprinkled with floating islands & bristling stumps & stubs, further up broader & clear water, perhaps here originally, as now, a pond. A farmer told us that Loons bred there every season. He thought there were at least four pairs this year. He hears them "squealing" every night. They fly back & forth from 1 to neighboring ponds. He also sees flocks of Ducks through the summer. Thinks most of them are "Dipper ducks". They are small & dark colored. He saw a few Mallards near the pond & took them to be Green Mallards but they were too far off to be surely determined.

During our drive out & back I heard only one *D. blackburnianus* & one solitary bird. I searched for the nest of the latter & quickly found it, left up in a hemlock, not quite finished. Indigo Birds were apparently numerous. We saw three ♂♂ & one ♀. Heard a Cat-bird & numerous *D. pennsylvanicus*. A fine cock Grouse sitting on a log by the roadside allowed us to drive past without flying. When we stopped he shook his ruff a few times.

(June 18) Then plus going off rather slowly & silently keeping his tail wide spread.

Reaching town at 11 A.M. we took the 11.25 train for Cambridge.

Sept 1

Went out with ... and had a ...  
 ... I ... at ... o'clock. Both to  
 ... the way green ... no birds of any  
 ... interest. The roadsides were banks of  
 blue, purple, white and yellow <sup>from</sup> the golden rods  
 and asters ~~and~~ which were in unusual profusion.  
 I saw also Eupatorium, a few thistles, and a white  
 flower (in the notch) new to me. It grew in  
 clusters at the head of tall stalks and was  
 showy & beautiful. In the notch saw a single  
 maple wholly crimson but for the most of  
 the way the woods were wholly green.

Lakeside.  
 Roadside.  
 flowers.

Last night was still, dark & misty. Thrushes  
 were flying in extraordinary numbers all the  
 evening. I heard them for nearly two hours  
 as I lay in bed and their calls at times  
 were almost incessant.

Heavy mig  
 of Thrushes.  
 (T. fuscescens)

There were S. swainsoni. (I now feel sure they were <sup>1907</sup> veeries)

At daybreak this morning I heard Golden  
 Plover whistling. They were evidently flying  
 about and they must have passed near  
 the house several times.

Golden  
 Plover.

Spent the day about the river repairing  
 my canoe etc. Saw many birds, from the  
 piazza, an Eagle & an Osprey fishing off the  
 landing, a pair of very large Grebes with  
 apparently creamy white crowns & backs flying  
 about the river's mouth & finally alighting  
 well out from shore & swimming about for some  
 time. They looked very like S. fidus.

Two strange  
 Grebes

Of small birds noted Cowbills, (Red), Pine  
 Siskinets & many common species. A Vireo olivaceus heard

Small  
 Vireo

(Sept 1) sang at intervals near the house. On the lake  
large flocks were jumping incessantly. The  
Pickrel could hear them splash in the water half  
a mile or more away. I noticed many <sup>of them</sup>  
floating dead or dying on the surface.

Sept 2  
Cambridge  
River  
marsh  
most of the day. I went out about 10 o'clock  
or 1 o'clock in Ryerson's pond. There were  
whistling but not much down. The birds  
flapping slowly about the house sky. There  
was very high & most of the meadows flooded.  
At the Lake House learned that Mr. Patton  
killed seven Woodcock in the marsh near  
yesterday.

Sept 3 Clear and warm. Wind S.W.

Not feeling well I spent most of the day  
in the house. Late in the afternoon beat  
the Woodcock covers within walking distance to  
the eastward. No birds or even old signs. A  
few tracks but not many. I saw a few  
in the woods but saw none of the  
seen. The berries are still perfectly green & very  
rank this year, in places as tall as my  
head.

among alders in the wet run, the third among  
brakes & spruces on a dry knoll.

Hawks

On the drive home saw three Hawks, a Cooper's,  
a Sharp-shin & a Broad-wing. The latter, a  
young bird in golden brown plumage, sat on  
a stake by the roadside & when I was within  
20 yds. or so flapped up into a spruce & then  
on to the top without flying again.

Sail on  
Call

In the afternoon had a poison sent along  
nearly to the Sable House one way and to  
the head of Sargent's cove the other. Near  
the mouth of the river saw a diving bird  
probably a Dabchick in Sargent's cove a  
young Whistler with unpledged wings. The latter  
was our target at first allowing me to sail  
within 130 yds. I shot at & probably missed  
him for he dove & doubled on me. After  
reappearing he uttered a curious feeble, strident  
call as he swam away from me. I chased  
him for some time but he had learned  
wisdom and eluded me by the most  
adroit diving.

Whistler

The air this afternoon was, singularly soft  
and fragrant with a quality that reminded  
me of the southern breeze. The woods are  
nearly as green & luxuriant as in midsummer.

1. in Woods, 21, Maine

1888

Sept 5

Clear & cool with a high N. W. wind,

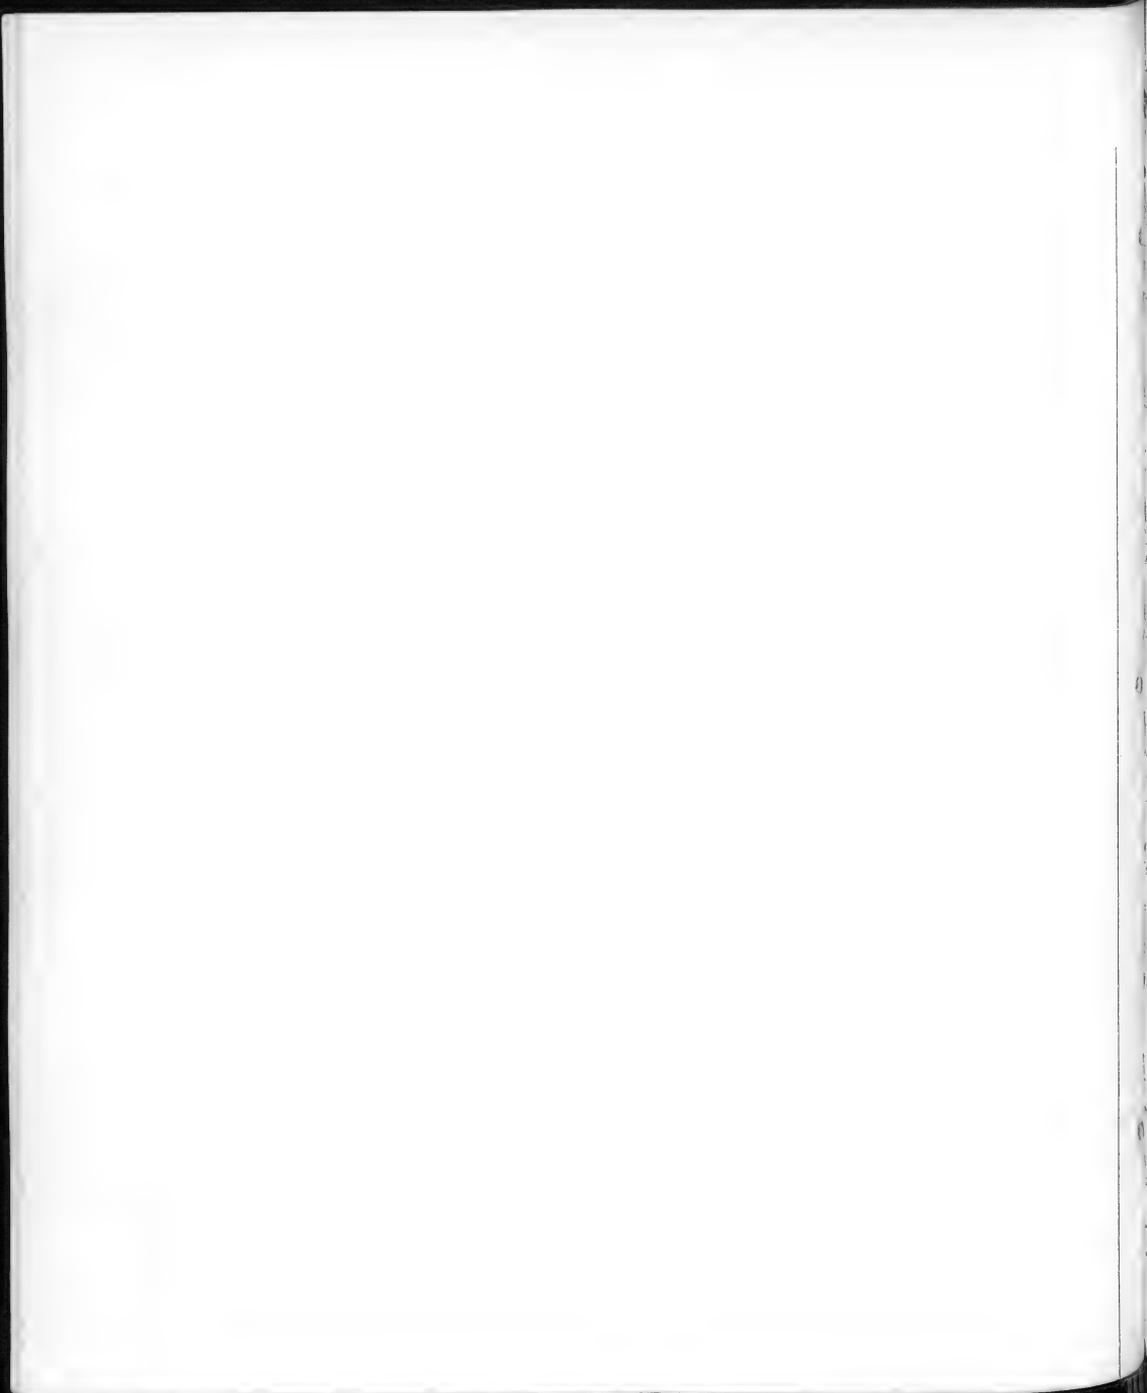

Spent the morning beating the covers about the Sargeant clearing. At his very first cast Don ran in on a Woodcock which went off unseen by me but whistling shrilly. I searched long & vainly for him. North of the road we found only one more bird which Don pointed twice & which I got at the second run by a very hard snap shot. I think I hit him the first run but not at all hard.

Woodcock  
shooting on  
Sargeant  
opening.

On the edge of the hillside spruces south of the road Don found & pointed another Cuck which I walked up going in ahead of the dog. This bird was mouthing badly & did not whistle but he went off like a bullet, eventually until my charge stopped him just as he was disappearing. In these spruces Don also roaded an old cock from which finally Don wild & got off unshot at.

I saw few birds this morning, a Thrush or two flying up ahead of the dog, several Robins in a pasture, a Red-tailed Hawk sitting on a stub & a few Warblers, Kinglets etc.

In the afternoon had a long sail on the Lake. Saw no birds of any interest.

Kennebunkport, Maine

1888

Sept 6

Clear & cool with high S. wind. Water from last night.

Spent the entire day hunting Woodcock with Mr. Koojoy. In the morning drove to the Pond White farm and after spending fully half an hour there came away without a single bird. We started only one Woodcock, in rather sunny spruce. We each shot over at him.

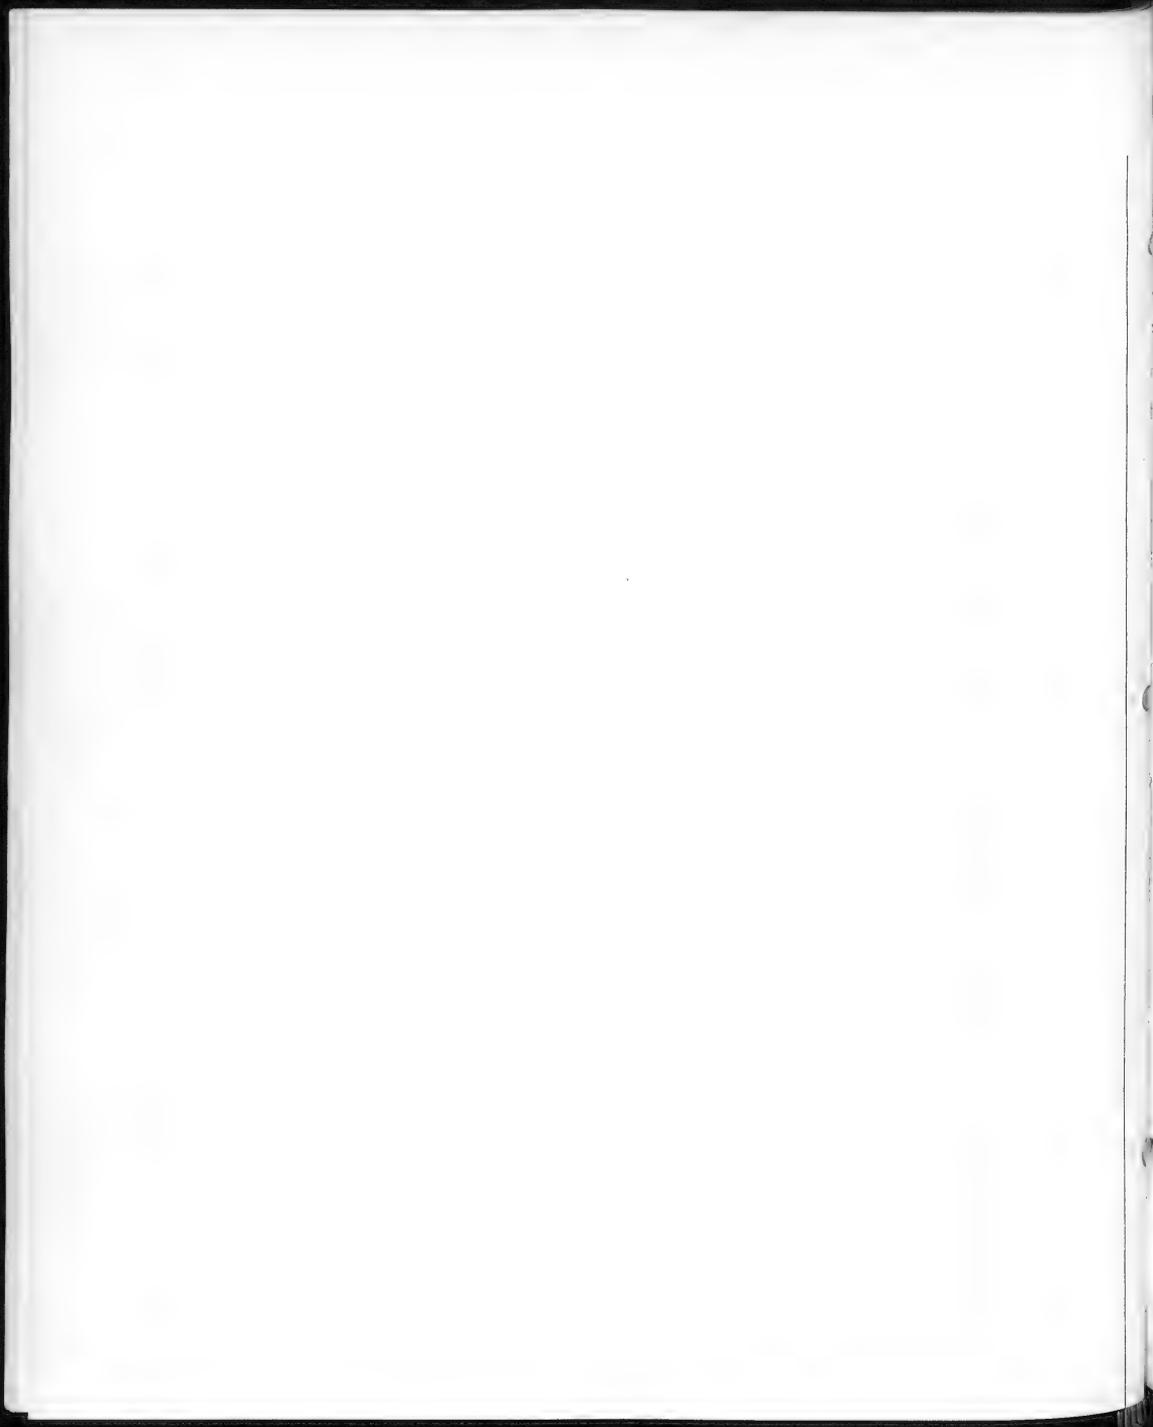

Woodcock,  
shooting with  
Mr. Koojoy

On the way back we tried the Sargent farm cover and B. shot the Woodcock I left there yesterday. Don made a very fine point on this bird.

In the afternoon we beat the alders behind Morse's on Upton hill. Found only one Woodcock which Don pointed three times. B. shot twice at this bird but missed both times.

In the alders I saw two Black billed Cuckoos <sup>one on</sup> one on the White farm, the other on Upton <sup>hill.</sup> Cuckoos  
One was silent, the other attracted my attention by a low guttural coo & roo which he uttered many times in succession.

<sup>Other</sup> small birds I saw a few Starlings and two Flickers.

Isle Mubago, Maine

1888

Sept 7

Clear & warm. Wind S. is perfect day.

Took the steam at 7.30 a.m. and left her off Starbuck Cove where I embarked in my canoe. The early morning was very foggy but before we reached the Outlet the mists were dissolved by the sun and the rest of the day was cloudless with an unusually clear, sparkling atmosphere. There was no wind until nearly noon and when I started to paddle inshore to Crocker's camp I found the sun very hot and the light from the calm polished surface of the lake most dazzling. On the way in I saw three *Phalaropus* which I took to be *P. hyperboreus* skimming about, occasionally alighting

Trip to  
head of  
Isle

*Phalaropus*

I spent about two hours at the camp. There with Crocker & the rest of his party, paddled over to the opposite sand beach to inspect some tracks which proved to be unlike any I have ever seen before. They most resembled Caribou's but the hoofs were unusually narrow & sharp for that animal. I should have taken them for the tracks of a Caribou were it not for the fact that the dew claws showed their impressions at every step even when the sand was hard. The hoofs also spread too widely for a Moose's. Of course they must have been made by one or the other of these animals as they certainly were not Deer tracks. In one place the animal had taken several successive leaps of fifteen feet each. Everywhere the

Caribou?

their tracks had miniature duplicates evidently made by a very young animal of the same kind. Probably a female Caribou and her calf had passed along the beach the previous night.

Leaving Crocker I crossed to a rocky point and hunched there. After this I put up my sail and beat down the Dohs tacking each time nearly from shore to shore. The entire afternoon was passed pleasantly in this way for the breeze was strong & steady and it was such a perfect day that I even for a moment tired of the superb sweep of mountains, forest clad shores, and blue waters that surrounded me.

Pintail  
Ducks

I saw very few Ducks & no small birds. My Moll's Hawk well out in the Dohs I suddenly discovered four Ducks swimming about two hundred yards ahead. I had barely time to get my gun ready (for I was sailing very fast) when I was within long range. Up to this time they did not seem to notice me but just as I felt sure of getting a good shot they stretched up their necks & flew, rising very like Black Ducks. I fired one barrel & dropped one at fully 60 yds. It proved to be a ♀ Pintail & the other three were certainly the same. This was the only shot I fired all day.

Young  
Gooseanders

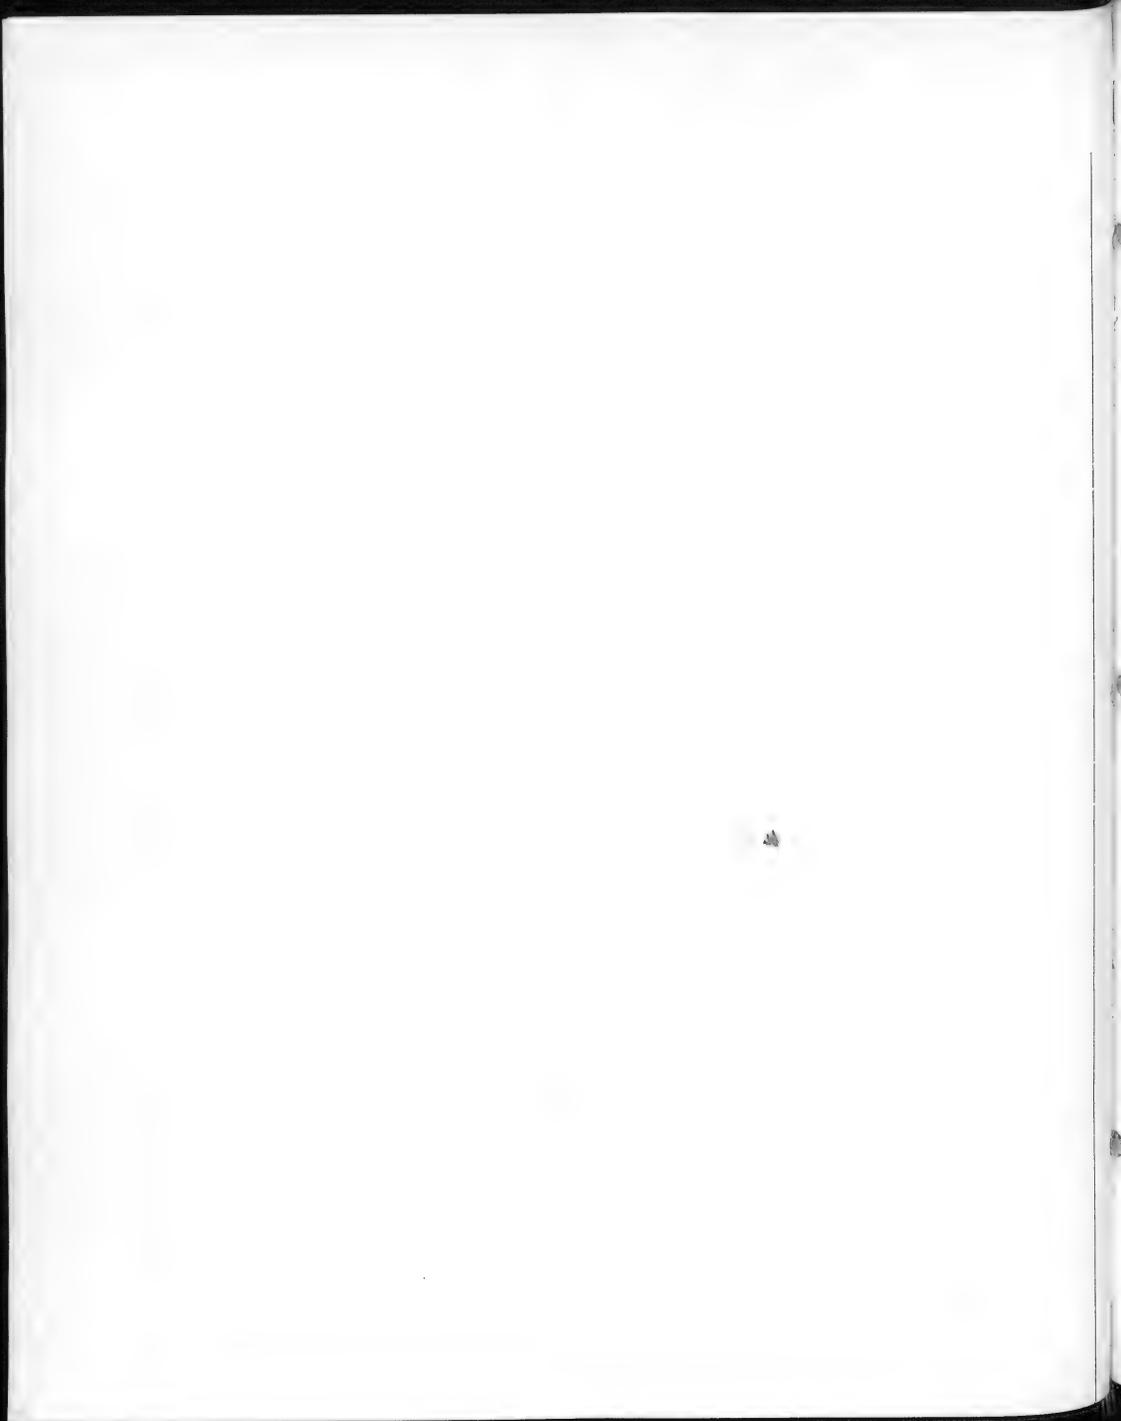

In Black Island Cove I sailed down on a swarm of young Sheldrake not larger than Pigeons. I took them at first for Gulls. They swam in a close cluster & finally "raced" off along the surface. I saw several Ospreys, Eagles, & Great Blue Herons. The Steamer picked me up at sunset off Heyward's

1888

Sept 9.

Out sailing on the lake in the late P.M. very calm.  
Blue jays flycatching over a grove of aspens. A  
Whistler calling or r-ruck very like a wood  
frog.

1888

Sept 16.

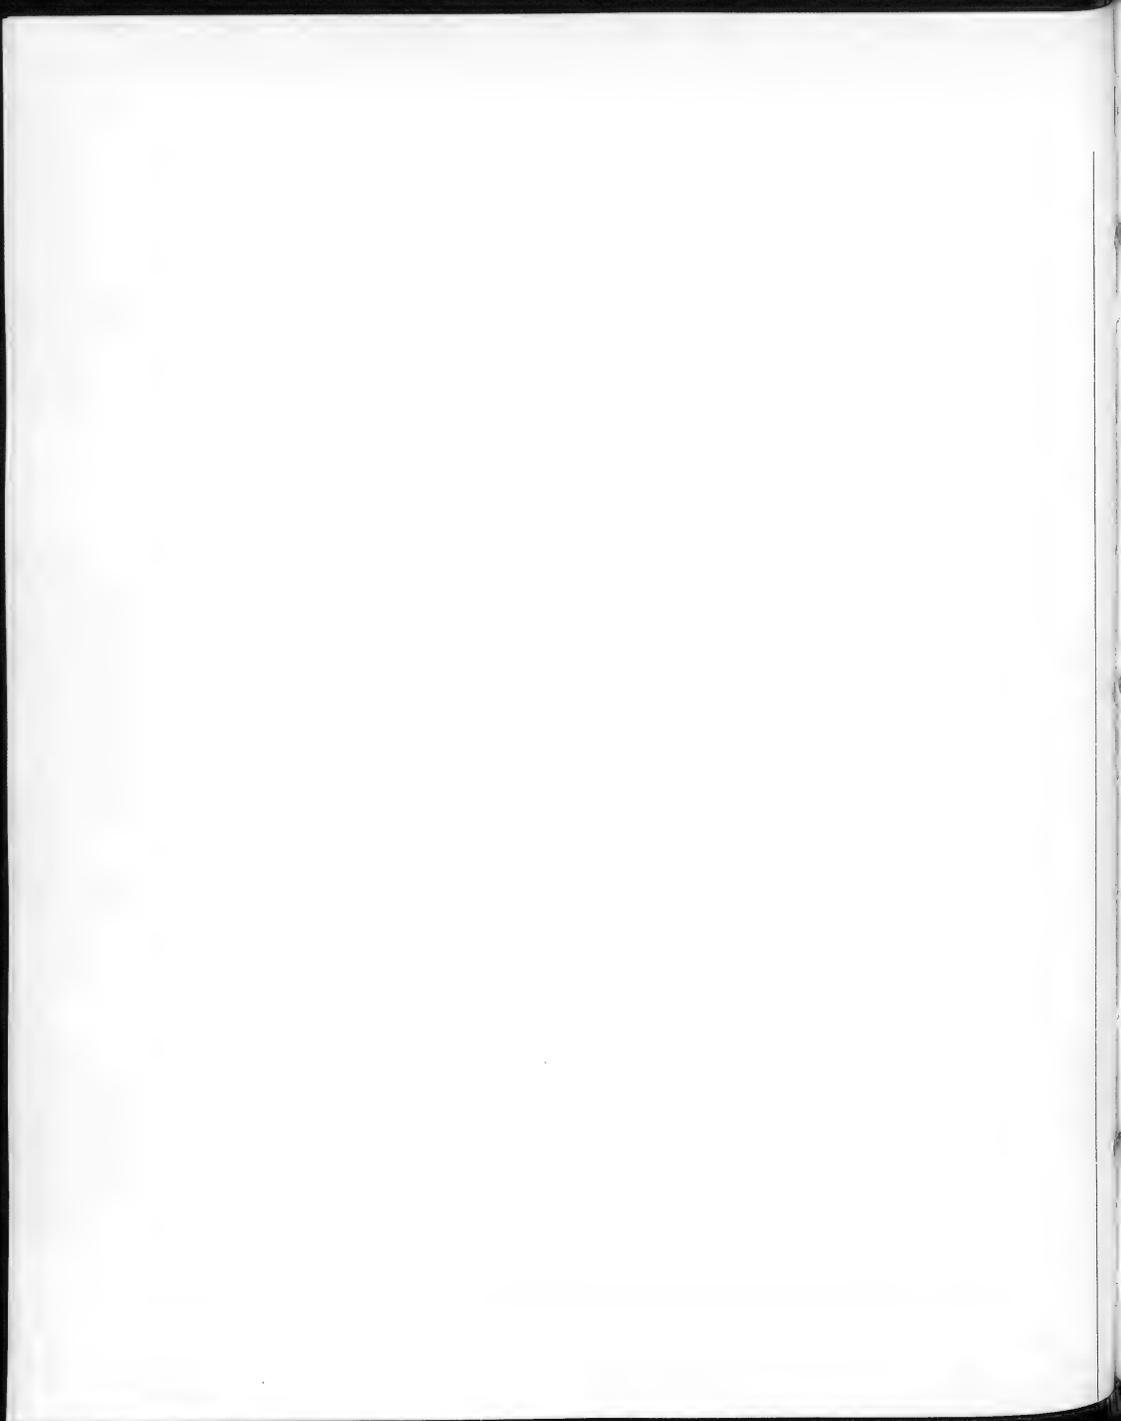

Clear and hot, wind W. strong in P.M. Started  
 at 8 A.M. for the Sluice. Spent nearly an hour at  
 landing on Cambridge waiting for boat. Birds  
 alive with birds a *Picoides*, a *Sphyrapicus* several  
*Sitta canadensis*. Warblers *Turdus swainsoni* Red  
 Squirrels. Carrying nuts and chasing one  
 another. Finally started. Paddled carefully to Hook  
 Saw no large birds saw a pair of *A. herodias*.  
 One or two Kingfishers. Scattered Warblers and Titmice,  
 many Kinglets, Two *Parus hudsonicus*. Lunched  
 at Hook. Looked vainly for a Woodcock which  
 Sumner started there yesterday. Then on through  
 the meadows. Nothing but a few Sparrows rustling  
 in grass. Then through green woods to Sluice.  
 Nothing but Robins and Thrushes *T. swainsoni*  
 feeding on berries of *V. opulus*, and one large  
 mixed flock of Warblers among them 2 *H. peregrina* Warblers  
 2 *H. ruficapilla* and 1 *M. canadensis*. Fished below  
 dam at sunset. Took 5 trout, one 3/4 lb. and lost  
 a 1 1/2 lb. fish. At twilight a Woodcock passed the  
 hut uttering its whistling whistle. As soon as  
 it became dark a heavy flight of *S. caesia* and  
 Warblers started and continued all night. I  
 heard many *S. alpestris* among the former. Night  
 still, clear, warm.

Lake Umbagog

Sept. 11.

Clear still, very hot. Rise at daylight and took a plunge in the river. Fished but did not catch anything. Then started for O. Pond. We found out one of a pair of young *A. herodias* that came flying over. When birds up, came on 7 Sheldrake nearly full grown but pinfeathered. Shot both barrels and missed. Farther on came up with them again. Shot one at 40 yds. The three scuttled around the bend and disappeared. A mile above I took to the woods in dragging the boat. "Don" came to point in long grass. Spruce & rose rose all together with a grand rush and roar of wings. I killed with 1<sup>st</sup> missed with 2<sup>nd</sup> barrel. Another bird rose and I dropped it. One bird wing broken, got on its own and escaped. In green fields (spruce and fir) I shot three more one on log over point, two in trees. One of latter uttered a scolding whistle. All young well grown. One mangled by road. Back to camp by noon. On way "Don" started five of the young Sheldrake from grass and I shot two. He also started a woodcock which I dropped. We pushed back to boat and one of the rose sand part. In sandpiper's other yesterday or today. Heard solitary Sand. at daylight, rise a Whippoorwill. Jim Bernice rose at 10 miles by sand land land out of spruce & rose knocking off his head. Crossbill (Red) Pine Siskinets and *Picoides arcticus*. Whippoorwill song at evening.

Sept. 12. Rained heavily all A.M. cleared late in P.M. at the  
 Spent the morning in the tent. 2 large black Shrike,  
 Hornet with white bands arrived at dinner, the Hornet  
 paper nest maker (I think) came into the tent shrike & bird  
 about once every 10 minutes caught a house fly,  
 bit off his wings and legs rolled his body  
 around many times until he had compressed  
 it into a small round bundle then flew  
 off holding it under his throat. The flies were  
 very rapid and yet the hornet missed many  
 before catching me. Killed the first in the  
 early afternoon catching the second bird.  
 Late in P.M. boat for Woodcock in the water  
 just south of the sluice, killed one, in the Woodcock  
 brakes just north of camp another. Fired at the nest,  
 first bird twice and put it up, then he  
 killed the second at first rise, first barrel. Don  
 made firm points on both. Saw a Cat Bird in Cat bird at  
 the slats. On the opposite a Sparrow Hawk the sluice  
 chasing two flickers in play and uttering his Sparrow Hawk  
 chattering cry. The flocks are leaving the common  
 the herches follow but asters still blue in coloring  
 masses along the river bank.

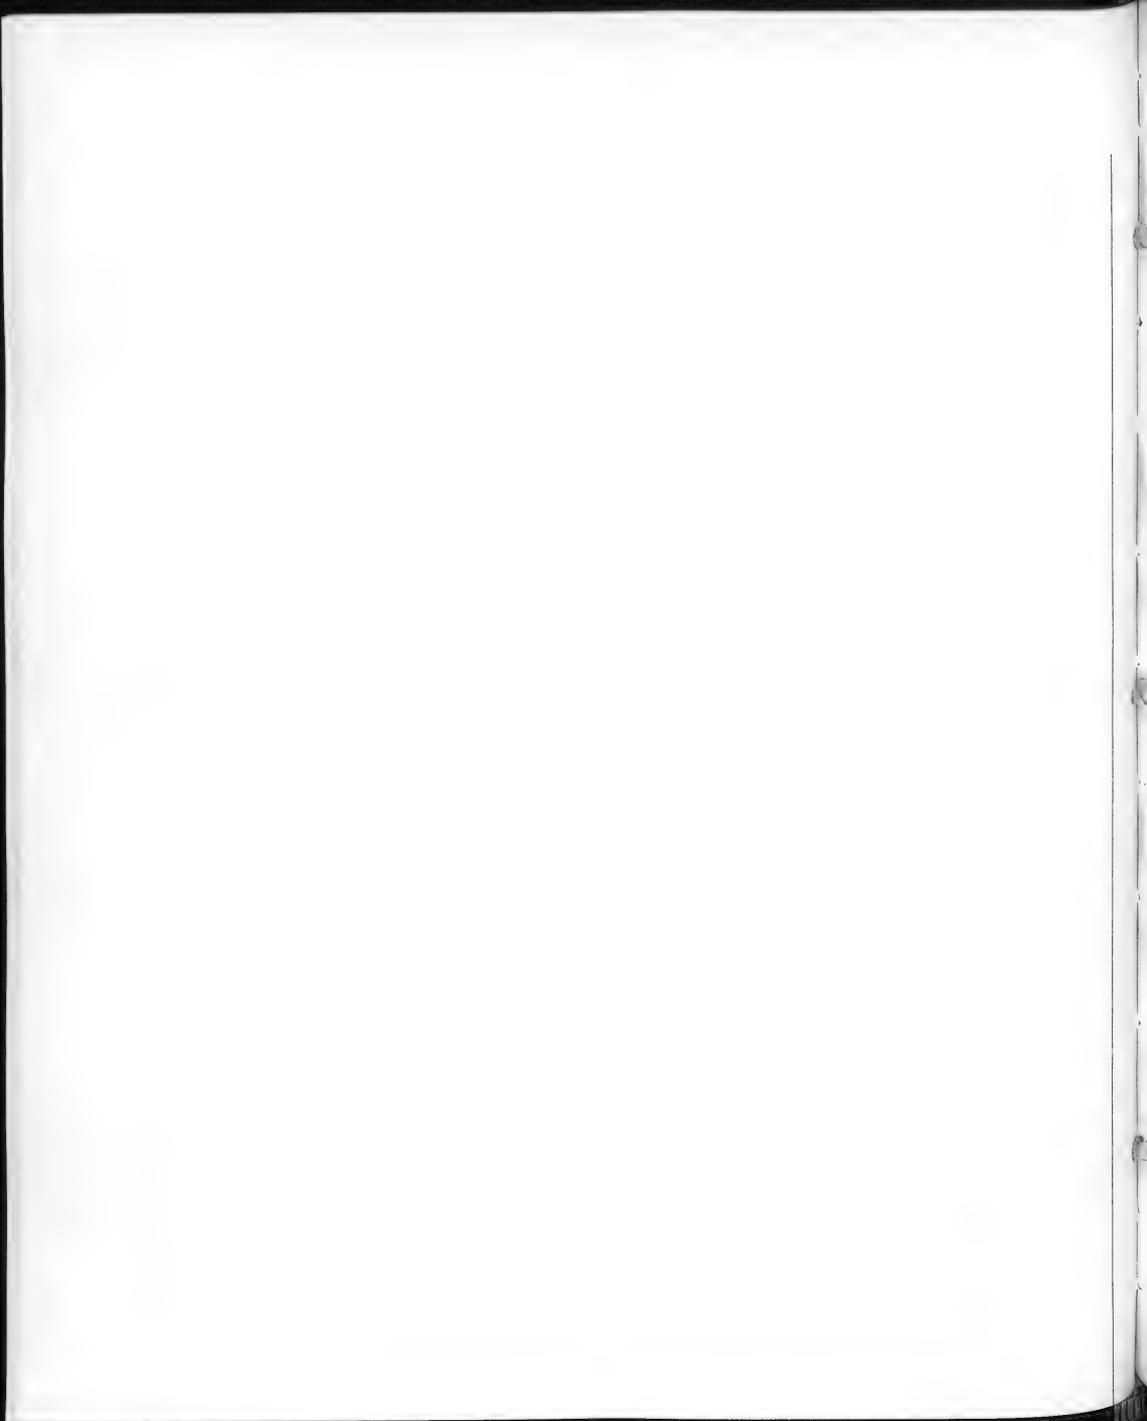

1881

Sept. 18

Early morning clear, afterwards clouds and light showers. To C. Pond starting at 7 A.M. Just above the Sluice a Hooded Merganser started from a pool in the lumps, I shot it and that was the only shot fired before reaching the pond. The water was high and very rapid and very unpleasant to wade. Saw nothing but common small birds. On reaching the pond discovered two Wood Ducks near the outlet feeding among the lily pads. They finally rose and flew dropping into a cove. I tried to shoot them there but failed and they flew back towards the outlet. We then lunched and lunched in a wood path. A flock of four or five *Parus hudsonicus* with a *Certhia* about us. After lunch paddled around the pond. Saw a *Melospiza* *striata* and a small flock of *Warblers*. Returning to outlet spotted three Wood Ducks, all old drakes paddled up to them under cover of tall bullrushes. I shot one in water and missed another as it rose. The third did not fly at all but swam up to the dead boat and itself fell a victim to its folly. The two young Ducks rose at the shot from immaturity but did not fly down river. He started them once on our return. About a mile above Sluice flushed a Black Duck which I fired a shot at just as it was going over. A few moments of feathers came back but the Duck although barely able to fly kept on up the river until lost to sight.

Wood Ducks  
Hudson's  
Titmouse  
Three that  
Wood Ducks  
together.

Sept. 17.

A cloudy day clearing at sunset; wind not very strong. Early in the morning the guide saw six Black Ducks pass the camp flying up river and hovering so decidedly above the Sluice that we felt sure of finding them within a mile or so. After breakfast Sumner paddled me up at least two miles but we saw nothing. Landed on S. bank and hunted some spruce knolls for Grouse; "Don" pointed a single bird which flew from a tree over my head. I fired a Snap Shot and missed. Following it "Don" again made a steady point among the young fawns I saw. A Grouse in one of them unobscured shot its head off. About a dozen others rose at the report. Three alighting all of which I shot without missing. Deer signs increasingly numerous among the blueberry patches. On a small thicket of spruce wood land we found 25 of their prints of dung within a radius of ten yards. Sumner says they always have special places to which they resort for this purpose. From the different sizes of the prints of dung it was evident that several herds at least had made them. Returned to camp for dinner. Late in P.M. I saw 2 Black Ducks go up river and apparently cover their flight to night. We again paddled up after them but found nothing. Saw a very black bird.

Sept. 15

Cloudless, cold at sunrise ice forming last night. Middle of day hot but temperate with S. wind. A brilliant perfect day. At daybreak a Whippoorwill being also uttering his note 5 times. A Blue Jay mimicking Buteo perfectly, as it was "ahing" by itself in the river. Broke camp after breakfast and started down river. Never have I seen this or any other stream more beautiful. The air was still and sparkling. Snow still lay in sheltered places, the sunlight played and glistened through the alders and larches the broad pools with strong light. Many snow birds among the alders were in the species, Nuthatches, Titmice, and various Warblers. Heard a pair of Canada Jays and saw one of them. Saw two large turtles, also two mice one of which a *Zapus hudsonicus* ran nimbly across the river skipping over the surface as if on land although the water was deep and clear. On R. meadows shot a Bittern which rose as we turned a bend in the stream. Lunched at the Forks. Thence up Swift Cr. bridge to Peaslee farm walking most of way. Saw nothing of interest. Down river late in P.M. A pair of Wood Ducks passed us wide of the stream as we neared the Forks. Just above we flushed a Blue-winged Teal and shot it. Baker found three above the Great Logan earlier in the day and shot two of them. As I paddled across to Lakeside in the evening heard a Buteo calling.

Lake Umbagog, Maine.

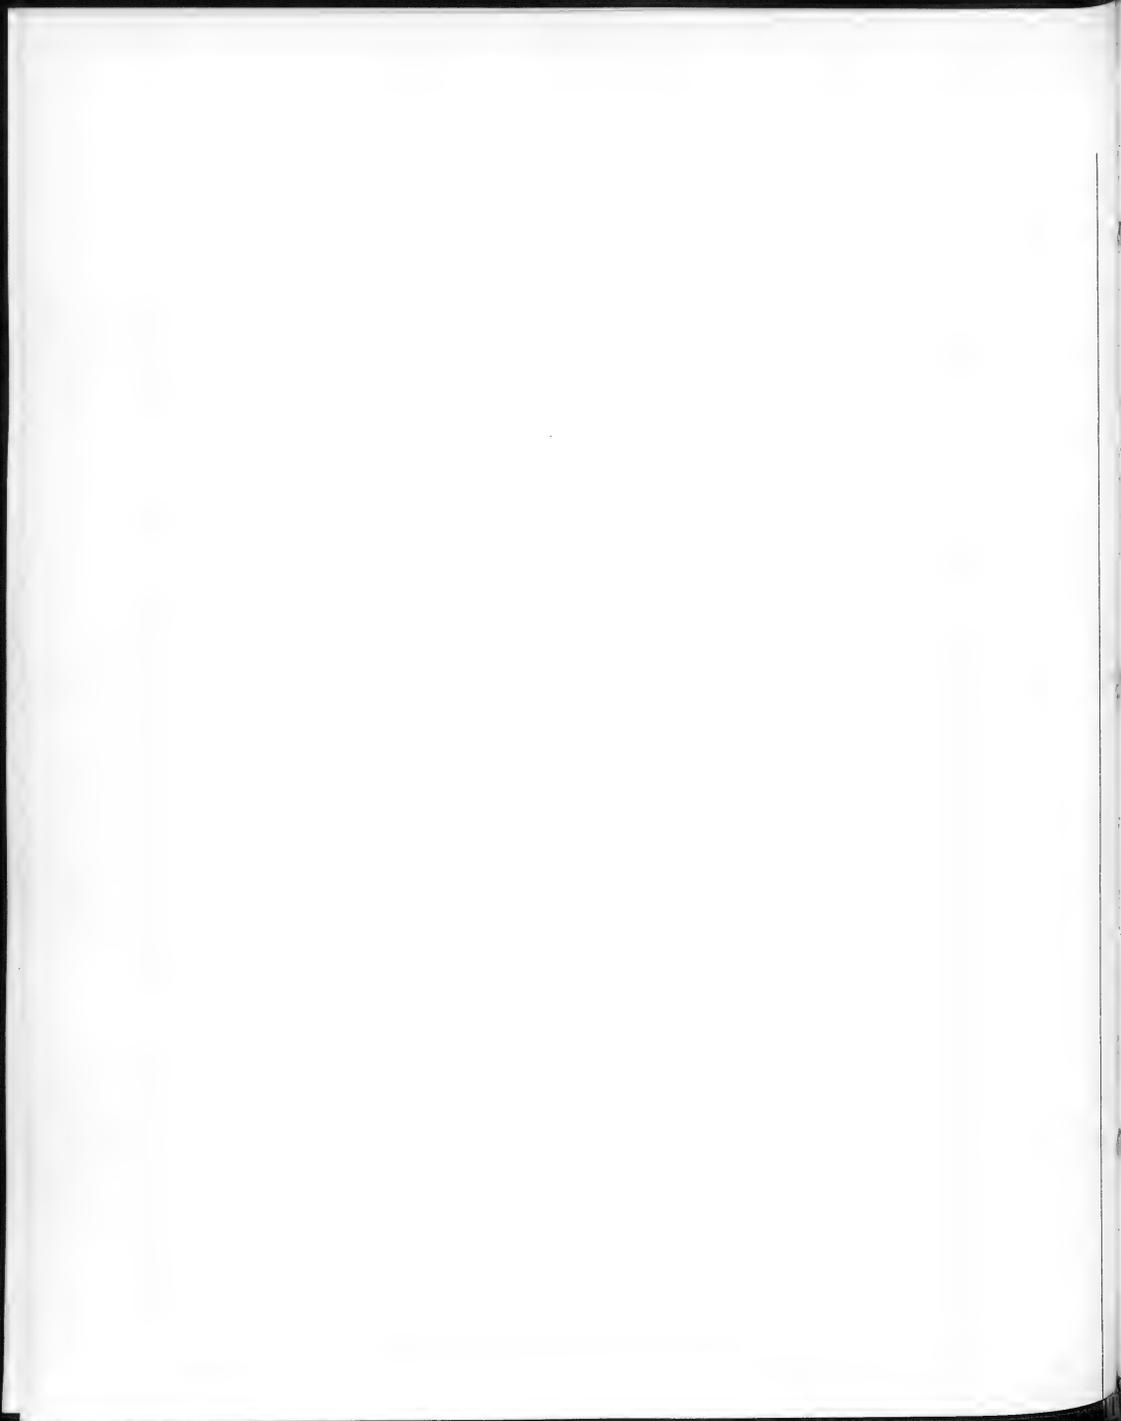

Sept. 17. A.M. cloudy; soon clear and intensely hot. Head of Lake  
 Lake. P.M. cloudy with strong S.E. wind. Left  
 Lakeside at 10 A.M. June going on ahead  
 to pitch camp at Mill's Rock. Sumner just  
 paddled me up the Cambridge Co. River's Tr. portmanteau  
 point I shot three D. palmarum. They were  
 among scrubby growth and about Dr.  
 Johnsons point found about 18 Stelidra  
 Sumner started them while I lay in wait  
 near the outlet. They passed with but a  
 knock. Some of them, one wounded which  
 went ashore and hid in the grass  
 where I found it. Passing B. Point I  
 discovered Wilson's  
 and watched it for some time till  
 my grass. Lunched on the sand beach  
 at B. Point. Thence across and around  
 Great Island. Two Snipe rose from mud Wilson's  
 flats and dropped in grass. Landed Snipe on  
 but they rose wild and flew out of mud flats.  
 sight. Flushed another and shot it.  
 a moment later two Black Ducks rose Black Ducks  
 from grass within 20 yds I gave one with  
 barrels (of #12) and it dropped least 20  
 yds off. It is called our Storking. Reached  
 Moll's Rock at 5 P.M. A Bubo Howling Bub  
 at night behind the tent.

1888

Sept. 18

Cloudy with heavy rain all of the wind S. E. found 5 of  
 To collect at 8 AM. Skilling's King and King order  
 were afraid of us but they missed a Common  
M. hydsonicus which stood on a mud flat. found 1 of  
 I fired both barrels at it and after flying a few  
 wings it dropped dead on the further side  
 shore. I shot a Beetle head and Golden Plover I shot head  
 passed I called them within range and I shot 1 of  
 shot both barrels but missed. They afterwar  
 ds came back (one with a broken leg)  
 and I shot both sitting. Skilling's and  
 still killed two Greater Yellow-legs on  
 Morse Point. Crocker's sons shot two Red Red Phalaropes  
 Phalarope in the Lake off Morse Point  
 and gave me one of them. In P.M. cru  
 sed under sail for my canoe looking  
 for Phalaropes but found none.

1888

Lake Umbagog, Maine.

Sept. 19

Cloudy with a few gleams of sunshine. Lake calm all day. To Caspary cove in A.M. While creeping up to the pond hole looking for Chucks I started a few among the long grass. I shot <sup>one</sup> at his head and after running about 100 yds. he looked over his shoulder when I finished him with a thread wound cartridge. On the way back to the boat shot a *Egretta tricolor*. It chased a stickle in the marsh & lighted on a tall stub. It uttered a clattering cry. Skirting the shore to the south came upon two *Pelecanus* *nocticolor* and shot a thread toward at one but missed. Landed at the pond north of the cove and Sumner made a long circuit into the cove with the boat. First four *Sheildrake* came passing within 20 yds. I made a clean double killing with birds stone dead. Next a single *Sheildrake* which fell broken-winged and gave us a long chase out into the lake. Landed in the sand beach at Black Island Nothing in the cove but four *Herons* circling over. Returning in P.M. Sumner paddled me within long range of a pair of *Whistlers*. They flew over & dropped one broken winged. We had a long pursuit but finally shot it again.

Sept 20. Heavy rain all day. Wind S.E. & 1000 ft in P.M. I beat the marshes for Snipe but started nothing. A large flock of Sparrows flying overhead. Sparrows numerous. Did not fire a shot all day. Saw a Sparrow near the tent.

1888  
Sept. 21

Cloudy with heavy rain at P.M.  
Wind strong from the east. Lake rather  
rough, air misty, mountains obscured  
by clouds. To Rapid River in A.M. with  
Skilling and Hill. At entrance started  
a Sheldrake. Saw Pines a pair of Whist  
lets. Below Cedar Stump, five or six Cuckies  
and seven Sheldrake. The former passed  
over Rapid H. and they killed one  
which "Don" found in the woods. We  
got within flying shot of the Sheldrake  
and I fired at one as they rose but failed  
to get him. After in which, started back in  
a pouring rain. A flock of Sheldrake at  
Pine Point came. A flock of 20 Black Ducks  
in those about pond hole. Did not go  
shot at either. Saw six snipe flying in  
a bunch like Plover. They dropped in  
Moose Point marsh. We followed them  
about there for an hour or two and  
killed every bird I bagged four of  
the six. I also shot a Virginia Rail  
which Don pointed.

Sept. 22. A day with drizzling rain in day. Head of Lake  
 No all morning fog. Wind from S.W. Lake  
 nearly calm at times air misty and  
 mountains obscured. Left at 8 A.M.  
 Slipping for North Lake where we saw  
 a flock of Grebe Loons slight early in the  
 morning. Found them just above  
 Moose Pt. Long wind rising at 100 yds.  
 apparently all were young (gray) Loons  
 probably butter bills. Saw flock of 12  
 near shore, the lake. About 10 o'clock  
 a brake in Wata-wack Cove. Tried to  
 drive them but failed. Returned to  
 Moose Pt. and reaching Pt. Hill and Mt.  
 Chillys beat the bushes with three  
 or 4 birds. Some patches of snow in  
 marsh "snowing" as in early spring. It  
 was raining at the time. Saw the  
 Point I shot a Spilopane that tried to  
 pull a right foot. A single live falling  
 from the water. The male came up  
 and sat on the Lake. He pulled it  
 and I shot a young Heron in water  
 and an adult Sarus pen. The other  
 four were all Terns probably S. hirundo.  
 Also saw two Halcyon (S. sp.)  
 (Horned Grebe) and one Spilopane and  
 Terns and Halcyon saw the first of  
 one and saw the latter but got no shot.  
 At the Point heard a yellow leg and Grass  
 Bird at evening. Bul. looking after dark.  
 About 10 P.M. there was a loud Catanaul-

ing in front of one of the tanks (Piscines)  
at the end of the valley, it puts a parallel  
to the fact, it was like the town cats since  
each had much louder.

1883

Sept 25

A dense fog up to 9 AM afterwards a remarkably beautiful morning the air clear and bright. The sun shined till 11 AM. The birds were very active in the afternoon with singing and whistling. At 1 PM a large flock of birds came in from the forest and were very tame. At 2 PM a large flock of birds came in from the forest and were very tame. At 3 PM a large flock of birds came in from the forest and were very tame. At 4 PM a large flock of birds came in from the forest and were very tame. At 5 PM a large flock of birds came in from the forest and were very tame. At 6 PM a large flock of birds came in from the forest and were very tame. At 7 PM a large flock of birds came in from the forest and were very tame. At 8 PM a large flock of birds came in from the forest and were very tame. At 9 PM a large flock of birds came in from the forest and were very tame. At 10 PM a large flock of birds came in from the forest and were very tame. At 11 PM a large flock of birds came in from the forest and were very tame. At 12 PM a large flock of birds came in from the forest and were very tame.

after the Chase Jimmy found two and  
I shot both sitting. Returned to pond  
and spent the day there. No Ducks.

Evening  
Hunt  
Notes

came in. To Moss Point for the night  
shooting. No Ducks seen. Shot a Red-tail  
C. sp. sparrow about 10. Yellowlegs in one flock.  
Heard a Snipe in the twilight.

1888

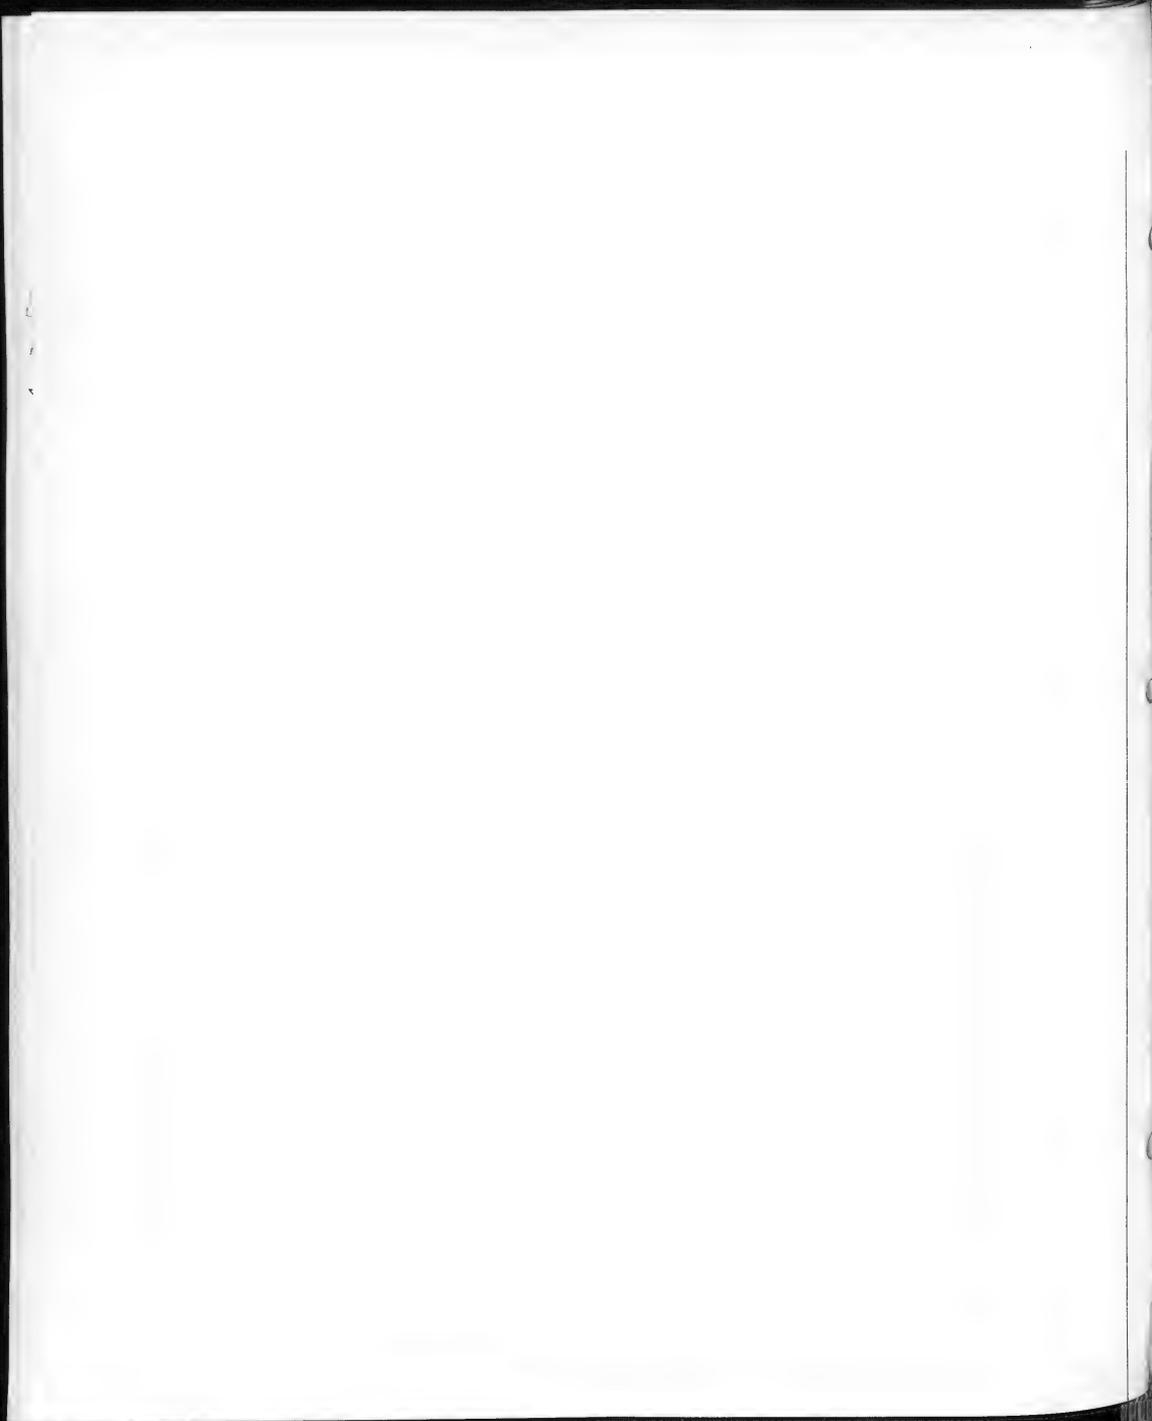

Sept 27

Clear and sunny and SW light west  
 after workers. They are busy on the path  
 with a view of them started to go  
 into the pond area. Some were on the  
 on ground near black ducks but they saw  
 us and rose quickly. Three into the water  
 on. About 30 black ducks scattered along  
 some feeding others on small banks sur-  
 rounding. I started three and getting them to-  
 gether that I had several but they were  
 a hard. I was on resting out of the grass  
 that they had been led for. Others  
 came from my gun and I dropped one  
 lunched at head of mardon. Following  
 a large flock of black ducks rose from  
 the grass. I shot one they would drop  
 ped one fully 75 ft. off. I was by  
 long distance. At 10 a dozen black  
 ducks feeding in the grass started  
 them and stopped but firing only  
 one target with birds got into the grass  
 where I don't quickly followed them.

Sept. 28. Clear and colder with high N.W. wind.  
Started early for the duck-ragging Menad  
cove. Just when the rigging was laid a  
wood shed at a fine adult Broad-wing  
ed. ranch sitting on a stump just passed  
with with barrels. Colored barrels found  
on shore and Dope taking the  
hudson. They found about 100 Black  
Ducks there and bagged two. He did  
not get a bag all day and I had  
only one shot at a Jack Duck which  
was in the grass. I wounded her  
badly and she dropped in the water  
but we did not follow her. We saw  
less than a dozen Black Ducks in all.  
Spent most of the day in a brush stand  
which we improvised to shield us  
and the boat. The water has risen  
about two feet since the last rains.  
Autumn coloring now superb.

1888

Sept. 29. Fair with intervals of sunshine and  
 breeze and here a few small  
 Crows it seemed to me as though the  
 whistling ground and Vireo Wood N. W.  
 and very few ground and all day.  
 Off at 7 A.M. going first to Moose Point.  
 Mountains all dotted a foot under water.  
 Three Hooded Mergansers diving among  
 the rocks. 2500 ft. high. Very dark.  
 A number of Red Foxes, white and black.  
 There is a great number of small full  
 set black ducks scattered about opening  
 the grass. While trying to paddle  
 within shot we checked two quans  
 above us and all the Ducks flew.  
 Three quans had entered the pond  
 after us and spoiled our chance. We  
 prepared to stay all day and our  
 traps were left. We returned back in  
 the woods. George started a house.  
 Two quans. Jays came about afternoon.  
 led by one fire. After lunch saw  
 three black ducks alight in the grass  
 George puffed and to them and  
 I had a fair chance for a double  
 shot as they rose but missed with my  
 first barrel. Later several bunches  
 of Ducks were in but were flushed  
 till nearly dark when four black  
 Ducks accompanied by a Green winged teal  
 teal pitched down behind some  
 bushes. He paddled to the bushes and

I peeped over the Black Ducks saw me  
and flew out the Seal had joined  
a bunch of six Wood Ducks and the  
other stayed. Lumen paddled me  
down on them across open water a  
fog hiding us and helping our  
chances materially. I got about  
five ducks in sight and shot into  
them at 30 yds. Stopped three and  
cut down another as the survivors  
rose. One of my fags, afterwards  
got up and off, picked up two  
Wood Ducks and a Seal. Chiquip  
Sparrows singing all over the  
marsh in the halibut. <sup>although the</sup> Evening was  
very cold. I was fairly numbed  
when we started for camp.

Tab. 111 111

Sept 30 A cloudy morning day with a light breeze. I left  
 about 10 o'clock for the lake. I saw two  
 flocks of sea birds descend to the lake  
 for the first time since breakfast. The  
 first was a large flock of male with  
 in fifty yards of the larger flock which  
 we found composed wholly of adult ♂  
 Am. Black-bills. They presented a singular  
 appearance swimming slowly past. Two  
 rows in broad body were about five  
 or six Ducks abreast. Their yellow bills  
 were very conspicuous. I shot 4 with  
 them in the water and BB as they rose  
 fully 20 birds were left on the water  
 about 7 dead. The others narrowly wound-  
 ed. I kept on shooting at the wound-  
 ed and chased several a mile or  
 more. We secured in all 14. At 10 a.m.  
 started for Lakeside, lunched at foot  
 of Great Island. There is a large  
 Cove where we saw a flock of 8 Surf  
 Scoters I shot three of these and also  
 a ♀ Am. Scoter also a Red Phalarope  
 swimming in the Cove. As we were  
 going from the landing to the hotel  
 in the forenoon we heard and saw  
 the big flock of Am. Scoters circling  
 overhead in a wide circle over the  
 water. The constant clamor  
 of their cries was exactly like sharp rills.  
 (The remarkable shot was the flock of Bull-billed Goats  
 described above was made with my 12g. Fox gun weighing  
 only 7 1/2 lbs.)

Oct. 1.

A clear, still, frosty morning, clouding over by 10 A.M. and raining hard all P.M. returned to camp by steamer at 7:30 A.M. Short morning shooting birds. In P.M. rowed over to Moose Point for the evening shooting. Eight white-bellied Snorks skimming over the water in the twilight. I shot one and this was the only shot I fired. Saw by flocks of Black Ducks drop into the marsh but neither came within range. Apparently there were no Scau ducks in the Lake today yesterday there were at least three and probably four flocks. The Steamer hands also saw five Phalaropes yesterday near Metallus Island.

Oct 3.

Cloudy and cold. Lake calm during  
 A.M. On S. side high N.W. wind and  
 heavy showers of rain with snow  
 squalls after dark. At outlet at 7:00  
 A.M. saw two seal *Phocaenas* alight  
 on the flooded meadow and started  
 them swimming. They were eating  
 grass apparently picking something  
 off the stems. Killed both with one  
 shot. Then saw a Duck *Ring-necked*  
 and saw it was a King neck floating *Duck*  
 within the ice. Watched it for about  
 40 yds when it rose and flew to the bar  
 rels at it with a great splash. It  
 those birds. It was a White-tailed *White-tailed*  
 Snaggle. It was in the meadow *in a meadow*  
 then it flew back over the meadow  
 there, returning spied a Duck Hawk *Duck Hawk*  
 sitting on a stub. Got within *at Moose Point*  
 100 yds. and was about to fire on  
 it when it rose and flew to the bar  
 rels in a way opposite towards Duck. It *in a meadow*  
 Am. Heron feeding in a bunch of  
 grass and we passed into the ice  
 stopping, three were got off wounded  
 badly, missed it with my second  
 barrel with another it settled out  
 in the line. It flew within my  
 range and hit it again as it rose  
 but it got off. Shot a Summer Yellow leg *Summer Yellow leg*  
 on a floating log. It rose about at  
 evening. Finding men about 300 yds *at evening*

Barn low flitting, about finally going to  
Swallow. roost in bushes.

111  
Oct. 3

Windy with light N wind, very  
Sensible drop at 12. Just starting  
over the first tall meadow to the  
Culvert. Then rising down the meadow  
again to Owen's boglow. After attack-  
ing a grass screen to the bows of the  
boat we entered this meadow. Near  
the further end we saw three Black  
Cuck's and paddled nearly within sight  
of them when they suddenly rose. They  
were just within less than 40 ft.  
but the grass screen prevented me  
from either seeing them distinctly  
or bringing my gun on them ab-  
solutely. I missed with both bar-  
rels. As I entered Long (Mill) meadow  
I saw only one of the same species  
I had seen at Owen's boglow. I  
knocked over dead. In the meadow at  
the mouth of a boglow I shot a great  
fire and succeeded. Saw a pair of  
Canada Jays at the entrance to Owen's  
Meadow. Back to the lake at 3 P.M.  
Paddled over the grounds about the Culvert  
but saw nothing but four White bellied  
Swallows hovering over a patch of stand-  
ed grass. In the evening we saw a  
Tree Swallow doubtless the same bird  
seen last night at Moose Pond. Reached  
Moose Pond at about 5 P.M. and  
located the boat on the outer edge of the

they were within ten yards. I missed  
the first and killed the second.  
Lightly they dove. Finally a large  
flock of Black Ducks came in a single  
bird swinging past within long  
range and I dropped him into the  
Lake with a broken wing, but he  
got into the grass and escaped.

Oct. 4.

Able with a gale of wind from the N.W.  
 Spent the day about camp as it was  
 impossible to do any shooting on an  
 account of the wind. Late in the day  
 a light wind came on and we started out to the  
 marshes near the Outlet saw nothing but a  
 white old Marsh Hawk Leonard's Pond also  
 proved blank. Just inside Moose Point we  
 saw our first Duck a pair we got that  
 it was swimming in a pond in the grass  
 and was fully 50 yards away spring-  
 ing straight up about 20 ft and  
 flying very swiftly. I fired with two  
 pellets but in vain. Shortly after a single  
 Black Duck rose from the marsh  
 of the marsh. He then took stands for  
 the evening shooting. Sumner having  
 my special gun on this occasion first  
 started four Black Ducks from Rapid  
 River. They passed me nearly 100 yds.  
 off and I fired only one shot which  
 had no effect. Next a flock of about  
 a dozen Black Ducks then flew past  
 me within 2 yds but direction toward  
 me I fired as well as I could  
 and was surprised to see one fall  
 and that at the far end of the flock  
 he was head but and before passing  
 we Sumner was killed him. Immediately  
 when it was nearly dark a single  
 Black Duck was seen to come over  
 me flying very fast by the marsh.

my shot she lowered her flight and  
settling out swept up and struck  
the surface of the lake. A third fired  
and she turned at her head and  
killed her. Besides these birds we  
saw two large flocks of Black Ducks

Cuffle heads (seen by Simon) which  
sailed over the end of the point. In  
the twilight I heard the Wilson's Snipe

1888  
Oct. 5

Cloudy with steady rain all the forenoon. The  
 The misty Lake nearly calm. Spent  
 morning at camp working on traps after  
 dinner paddled over the outlet and  
 was not far on being fifteen to twenty  
 rods passing a rocky shore we started  
 a cove. Searching and hunting there  
 at the woods over a few acres we started  
 in less than five. I shot but one sitting  
 on a log, another on a maple, and I  
 missed a few shot at a third which  
 you have a better hope. There was a large  
 flock of Mallards in the cove. These  
 were belonging to the flock we saw  
 a few ad. & drake. The first out of  
 range. Shortly afterwards a Black Duck  
 passed and turned into a cove to the east-  
 ward. He paddled in the boat without  
 grass. He had ducks splashing among the  
 grass at the head of the cove. He had three  
 Black Ducks saw us and one going off di-  
 rectly into the woods. The last turned  
 two fliers we and came close past us  
 within 30 yds. I caught them as they  
 drew together and killed both with  
 one barrel. Thence to home past  
 a single Duck passed out of range.  
 Then a single Black Duck circled  
 around and turned back over me. I killed her as she  
 was going off. The evening was per-  
 fectly still. I did not hear a single  
 Black Duck

100 yds  
100 rods

100 yds  
100 rods

Black Duck

100 yds  
100 rods

wings 200 yds. or more away. A flock  
passing high overhead made a  
hissing sound as if escaping steam.  
I could also hear Ducks splashing

The alloues!

1881

Oct. 10 Rained all day with steady rain most of  
 the time. Went in P.M. to the marshes  
 & in P.M. saw a lot of all day. Weather  
 rather warm. Left at 8 P.M. to marshes  
 about Outlet. A flock of about a dozen  
 Swallows on the marshes. The rest of  
 birds. A perfect cloud of Titmice at  
 least 200 circling over the marshes  
 alighting and flying again. Down the  
 river some 300 came upon the *Spiza*  
*maculata* sitting on a mat of floating  
 grass with a lot of seeds of *Phragmites*  
 about. *Phragmites*, *Sagittaria* & *Sparganium*  
 sometimes walking on the grass. Shot  
 the *Sp. large*. End Grass Birds flew off  
 and pitched down near the Outlet.  
 Going to the *Sp. maculata* a flock  
 of ten or twelve of *Sp. maculata* in a  
 few minutes several singly flying. They  
 were remarkably tame. Heard a *Sp. maculata*  
 near Moose Point came on three Greater  
 Scaup Ducks. They were in the grass  
 until rose and *Sparganium* grew, in  
 Leonard's pond. Followed them but failed  
 to find them. Heard a *Sp. maculata*  
 near Seal, however, behind the island and  
 paddling within 30 yds. shot it as it  
 sat on a snag, plucking its feathers.  
 Our boat was 20 yds. at the time.  
 When the Scaup Ducks rose a *Sp. maculata*  
 also started near us and I shot it.  
 Afterward saw three at Moose Point. They

rose from the grass where the water  
was a foot deep. Found a Black  
Duck dead on the bank where I  
just a moment ago a few evenings  
ago. Hence to Whale Back Cove. Saw a  
few Shadrake. Landed at Crockett's  
Camp ground. Saw several Thrush  
making their noise. Returning to  
camp saw a Duck Hawk perched  
on a log only six feet above water.  
I went to it. It flew and passed me  
at 75 yds. shot both barrels without

1888

Lake Umbagog, Maine.

Oct. 7. Cloudy; wind N.W. light; pouring rain all Head of Lake  
 day. At daybreak Amery discovered four  
 Sea Coots in the cove off the R. Byrke shore. White-wing  
 He hunted for them about 7 with a cove. Coots  
 fully grassed boat. They seemed to be high  
 bridged with glass 10 to 12 and so that  
 that we could not get within 200 yds  
 of them. The same morning at least Fewer bird cots  
 thirty cots was seen in the same place  
 that is not like Butter-bills the grass  
 grass. Amery the Amery saw three  
 white-bellied Snittans. Amery in  
 stayed for the Amery of the Amery  
 it was Amery Amery Amery  
 we left Amery at camp Amery Amery  
 as the Amery proved. We had crossed  
 the marsh and were paddling down  
 the river when I saw three Amery just  
 over the bank. They Amery as we Amery  
 and Amery that Amery and I had to  
 shoot were Amery Amery. I fired only one  
 barrel and Amery Amery at once  
 made for the Amery and although we  
 searched Amery for them we lost both  
 one started from a bunch of grass near  
 us but at once Amery and was not  
 seen again. I think these Amery were  
 the Amery Amery Amery they were  
 either Amery Amery Amery Amery  
 doubtful Amery. While Amery for them Amery  
 we heard a Amery Amery whistle. I Amery  
 called him down and shot at him break-

AmeryAmeryAmeryAmeryAmery

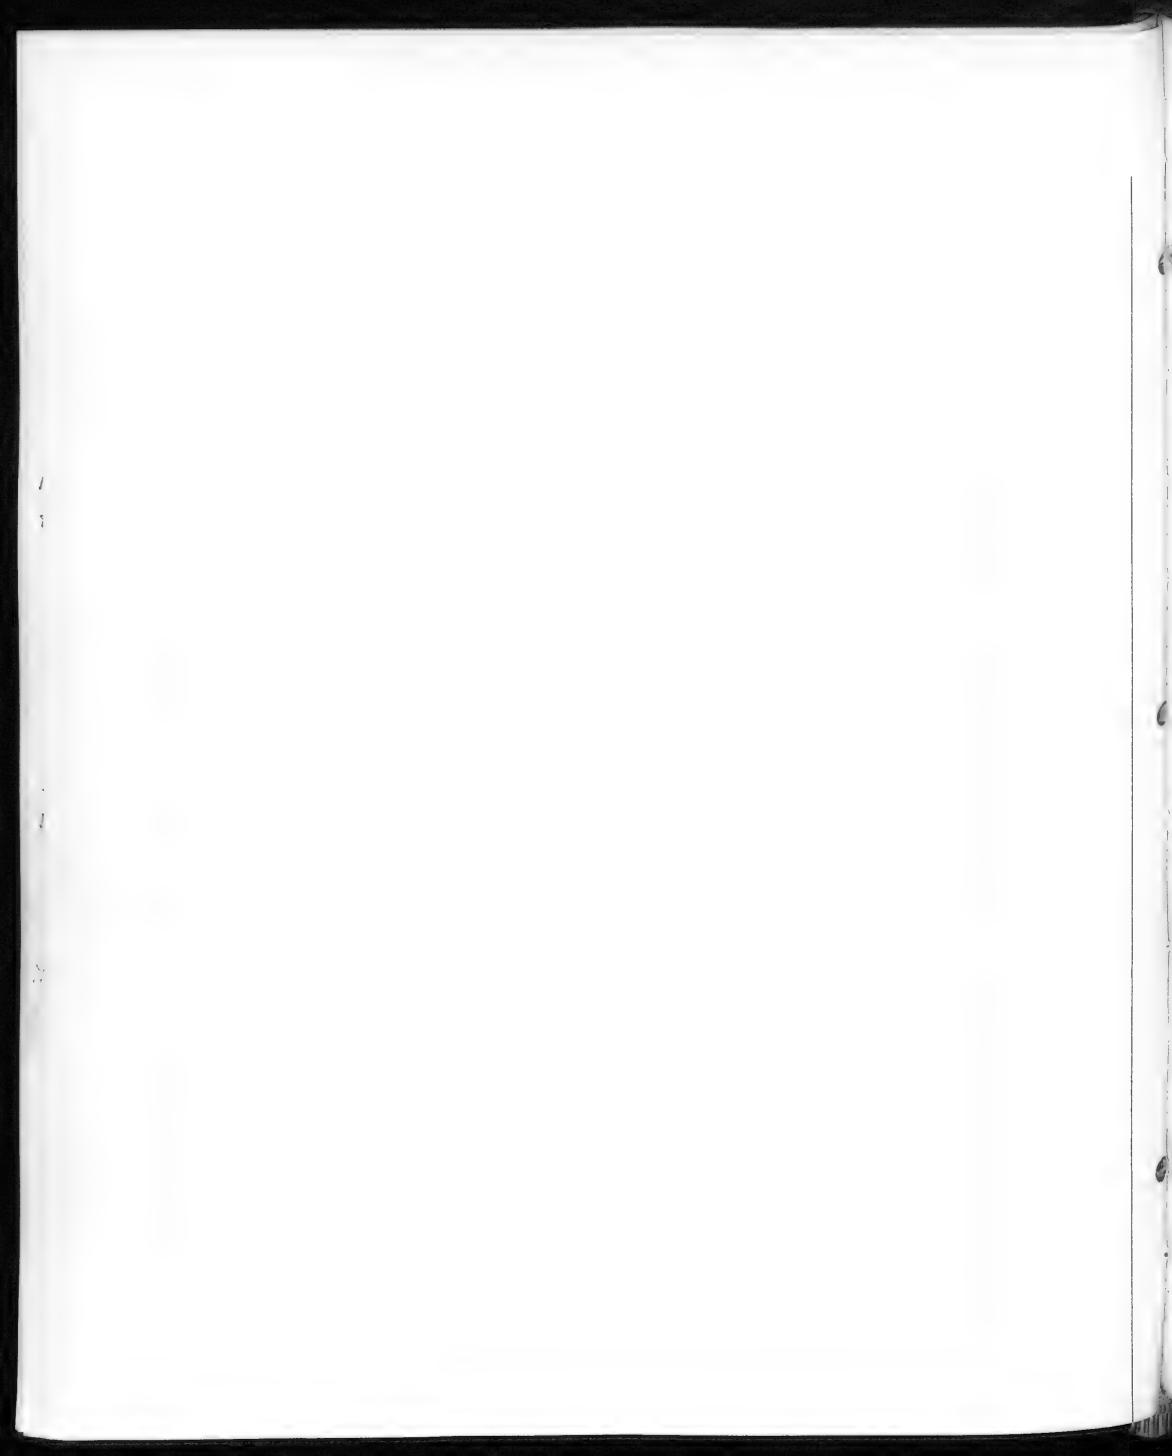

my little legs and wounding him other  
times so fell on the other side of the run  
but when we went for them we missed  
the right spot and he was behind us  
and again angling his time in the  
morning he went to the place but failed  
a first or second time again. While back  
was for the first time when a King Hawk  
flying over a small I found a long shot  
up the road and wanted to see whether he  
would be a distance and after firing  
three times he did not appear. In the next  
instant he fell a while covered. You  
may find it necessary to get out more  
and not to get out of the bird. One day  
I saw a "Cross" was making a great racket  
calling or r-puck and out of the trees. All  
the while the gun was firing. Never got  
him and finally we got enough of it  
and returned to camp. Saw the bunch  
of four and one great Duck on the  
They had black heads and white bellies  
and were about the Porter Scump. at 4  
P.M. the steamer came we with the  
steamer and made us a call. Sumner  
left us when she returned. At 4.30 I  
started alone for those hills for the  
evening, starting. On the way started  
a woodcock and shot from under the  
bush. It dove and disappeared.  
It was probably one of the Ducks. I shot  
the woodcock. As I neared the Point

1888

Nov. 10, Maine

Oct. 8.

Cloudy all day with raging N. W. wind and heavy rain. Occasional light showers. Off at 4 A.M. Went over the marshes first but saw nothing of any interest there, except a large flock of Black Ducks which rose when one of them lost the "clew" and drifted up the marsh near Sconce's Pond. We had forgotten it and was rowing carelessly along when it rose only about 20 yds. ahead. It alighted in Sconce's Pond. Going on after it we again got within 30 yds. before seeing it. It then rose and I shot it. Next to Great Meadow. Entering this I saw four Black Ducks swim in a pond a pond. We were getting up to them, surely when several blasts went exploded at Great Camp. Our Ducks rose at once and from the west side of the pond a perfect cloud went up fully 100 birds, all Black Ducks they streaked off to the East. We pushed on cautiously however and soon discovered about 15 Black Ducks in the edge of the grass. Jim pushed the canoe up with us about 40 yds when a Duck raised its head. They were well furnished so I fired at once stopping four with the first barrel and cutting down a single bird with the second. One of the wounded soon rose and I shot her down again at very long range. Our quarry three of the wounded in the grass. We then landed and while I was in the bushes

in this way

11 July. I looked for Grouse. One rooded  
and pointed me at which I missed  
a second flying shot. Soon after saw either  
the sex. or another bird on the ground  
and shot it a fine plumaged adult  
♀. While eating lunch a flock of Parus  
hudsonicus came about. After lunch  
watched all the afternoon for Ducks  
but curiously enough only one came  
in and that we failed to get a  
shot at. Just at evening heard a  
Grouse quit behind us and rising  
saw it walking leisurely along and shot  
it. A fine adult Marsh Hawk covered  
the marsh late in the day  
There were three White-bellied Swallows  
also and some Killdeer. Saw a  
Picoides arcticus in Leonard's Pond.

1888  
Oct 4

Cloudy all day with high N. W. wind and almost incessant snow squalls. At day light it was snowing steadily and the ground and trees were as white as in winter. On northern exposures snow lay all day to the depth of an inch or more. The remaining foliage still at near its highest point of obtaining was very fine, fresh with the snow (off at 8.12 AM) in the Outlet. Water very high and even the high river bank is under water only the grass showing. A Heron, Gull, Hooping near the bar. Tried to paddle without shot when we started a flock of about 20 Black Ducks accompanied by four Gad-geon. A single Gad-geon straggled after the others and I shot it a fine adult ♂. Next a Goldeneye passed near and I shot both barrels at it. It fell out in the lake when we picked it up. Next a House Finch, no more than. Then a few Songrats shot a flock of about 15 Black Ducks in the grass behind the island. Got within 100 yds. when one put up its head and they all flew. Shot both barrels without effect. They a sufficient time and retreated. They paddled without shot range and I killed it sitting. Hundreds of Warblers, Sparrows and Redstart thrushes along the shores also about 30 Rusty Black-birds six Bluebirds and a Phoebe. Next out into river. Saw six Red-geon alight near

In some places we went into the grass and  
 we paddled rather slowly. They were well  
 benched where I went and my first hen  
 had stopped. With my second I brought  
 out a little more and we used some of the  
 same kind of flowers as we approached and had  
 to be shot over. Some were now gone. Ducks  
 with Bass Kid geese but they both were not  
 far from the shore and it was not at all  
 difficult to see them. *fulviventris* and *Spatz*  
*monticola* and saw a young *Zon. leucophrys*.  
 At least two Killdeers over the meadows. A  
 single Hawk chased one for about 500 yds and  
 made at least 20 swoops at it but missed  
 every one, the bird finally escaping. The  
 Hawk then alighted on a bush but flew up as we  
 approached. We tried to catch *fulviventris*. We  
 did not see any *fulviventris* in the Meadow in  
 the usual place. We did not see Black Ducks at the usual place. We  
 did not see so high we could not approach them. Near  
 the head of the brook found a Buffle-head but  
 he rose quickly. I shot both barrels but failed to stop  
 him. I saw a single Hawk beating over the meadow.  
 At least two Killdeers in this meadow. I also  
 shot at a young *Zon. leucophrys* and a pair of  
*fulviventris*. I shot the first and missed it. The second  
 then four came directly over me. I missed with both  
 barrels quite unaccountably for they were near  
 enough. Heard a Snipe. Went over several  
 times and there but missed a Lake Trout of  
 Larrea. *Monticola* and Killdeers to day simply  
 amazing. Thousands of small birds too numerous.

1885

Oct. 11

Cloudy with high N.W. wind and frequent  
snow squalls, nearly a duplicate of yester-  
day but colder and less snow falling. Wind  
the same in places among the grass. Ground  
in woods covered with about 1 inch of snow.  
Off at 8 A.M. going first to Outlet Meadows  
entirely under water and no birds. Thence  
to Moose Point. Stopped about 20 Black Ducks  
out of range (see two Moose Point (no  
adults) and a Prairie Hawk all feeding  
about over an acre or so at once. Next saw  
two Black Ducks feeding. They discovered us  
and flew but one alighted again in a pool  
among the tall grass. One of the Prairie  
Hawks dashed down at her at least a dozen  
times. We could not see the Duck but at each  
swoop of the Hawk she quacked loudly.  
On returning to the boat we found the Duck  
gone. I put "Don" into the grass and he  
soon started her and I shot her as she  
rose. Next to her was "Spot". We passed  
started and went out then a Black Duck.  
We then discovered four Black Ducks and a  
Green-winged Teal. I landed and stalked  
them but could only find the Teal which  
swam repeatedly past me within a few  
yards, quacking incessantly in a raspy  
cracked tone almost like the scarp of a  
Snipe. At length he put his head under  
his wing and went to sleep, failing to  
get a sight at the Wood Ducks. I finally  
shot the Teal and quickly replaced the

Leonard's exploded shell. The Wood Ducks, flew from  
 the shore inland, swept past our range. They landed and came back within  
 40 yds. of us. I dropped one with each  
 barrel. While stalking these Ducks I heard  
 100 notes sing 50. call times. There were  
 hundreds of swarms of small birds, chiefly  
 Kinglets. There is one Yellow-rumped. In  
 many flocks along the shore, they rose  
 in clouds as we passed. There were Rusty  
 Blackbirds and seven Olivebacks and I  
 shot a Tyrannus the first. In this  
 locality, also saw a ♀ Black-throated Blue.  
 In the Swamp and Song Sparrows swarm  
 in. All these small birds kept near  
 the water especially among fallen tree  
 tops. There is a great meadow marsh, a  
 long grass shot at a Meadowlark on the way.  
 In the meadow started about 30 Black  
 Ducks. They all went off, was not at  
 the shot was too high for our chance  
 at a shot. Saw a Sharp-shinned Hawk  
 I was about to shoot a Sharp-shinned Hawk dashed  
 past me. I missed with the first but  
 brought him down with the second bar-  
 rel. He fell through the branches of a  
 leafless maple. We left him for some min-  
 utes or so feeling sure of him then going  
 to the spot could find no trace of him  
 at first. Finally, I found where he  
 struck the ground and there climbed  
 upon a low stub the snow all about.

Leading to this spot was the track of a  
 Red Squirrel leading away from it the  
 same track with 12 spots of blood about  
 two inches in front of each mark of the  
 five paws. The substance is plaide. A  
 squirrel saw the Hawk fall seized him  
 and carried him off. I followed the track  
 into a tangle of alders and fallen trees and  
 finally had to abandon it. Don't failed  
 to show any signs of secret. In a hole near  
 that the Hawk was taken off suddenly  
 swooped in the usual spot. Noets filled <sup>small bird</sup>  
 with hollow rumps. <sup>hoaring</sup> <sup>curly</sup> <sup>meadow</sup> <sup>meadow</sup>  
 two in swarms. Among early larks, mead  
 row, yellow rumps in flock of 20 or more  
 and among the grass perching on the <sup>Red tailed</sup>  
 floating stems. A pair of Red tailed Hawks <sup>Hawks</sup>  
 among the spots. Another Plover Hawk <sup>Plover Hawk</sup>  
 Three Black Ducks came in and alight <sup>Black Duck</sup>  
 ed. They rose and came down  
 just as about 50 yds. off they turned  
 and came past again at about 100 yds.  
 I shot both barrels each time but they  
 wounded one which flew out of sight.  
 Near the outlet of the meadow a Jack <sup>Jack</sup>  
 chaise started. I shot it and about 20  
 yds and missed another passed over  
 high on the river and I missed a  
 glen then back to Leonard's Pond.  
 Two Wood Ducks where I shot the two <sup>Wood Ducks</sup>  
 this morning. It was too late to stalk  
 them and they rose out of range as we

Duck

Went towards the sea. Another Pigeon  
Hawk seen here. There is a Moose  
a flock of at least 50 Black Ducks feed  
ing in the flooded meadow. Here let  
the orange drift before the wind and  
we get within about 100 yds. before they  
fill up their necks. I shot into a  
small mass of them with #4 and  
inj. bird one which we got easily  
killed as long a shot as I ever saw  
made with a loose charge. Took the  
same stand as last night. About 20  
Black Ducks came in and I got with  
three shots all long ones and all misses.  
I did not miss a fair shot all day  
but had a surprising number of chut-  
ces at 70 to 80 yds. and all but the flock  
shot missed. The flight of small birds  
these last two days has been simply  
amazing. Saw at least 500 Yellow Warblers  
today. Among the Black Ducks at  
Sweet's Meadow were four Widgeon.

Wren Pt.

entire and yet with strong N.W. wind. The  
 first few days see a heavy time. The  
 woods small till 8 A.M. While watching a  
 flock of dusky Wood Ducks a fine adult  
 ♂ Pigeon Hawk dashed past and  
 alighted on a stub where I shot it.  
 A few minutes later saw a flock of Black  
 Ducks winged around the island. Hunted  
 and made a circuit of about half a  
 mile through the woods coming out  
 at the big pond. The Black Ducks there  
 but probably a pair of Wood Ducks  
 alighted and swam in nearly misti-  
 in shot when they caught sight of me  
 and swam out again, probably tak-  
 ing wing. Shot a pair. White-throated  
 Sparrow and a Sitta carolinensis the  
 latter one of a pair. Saw a Sharp-shin-  
 ned Hawk look over the pond. Many  
 small birds in the woods. A red squirrel  
 ran about and finally smelted  
 my foot, was very busy then working  
 off in a panic. I am finally apprised  
 from him through the woods. The Black  
 Ducks had passed me somewhere and  
 appeared near the boat where he left  
 them. I returned with him by land  
 but found them gone. On the way  
 shot a Grouse which started from a  
 mud pine log and alighted on the  
 ground. Near the outlet of the pond saw  
 a Red-billed Grebe (identified him posi-

to them. They proved to be Horned Grebes  
one dove and two flew. I missed a

B Point missed a Sheldrake with both  
barrels. Saw a flock of about 15 Coots.

1888

Oct. 12

Tele. Embury, Mass.

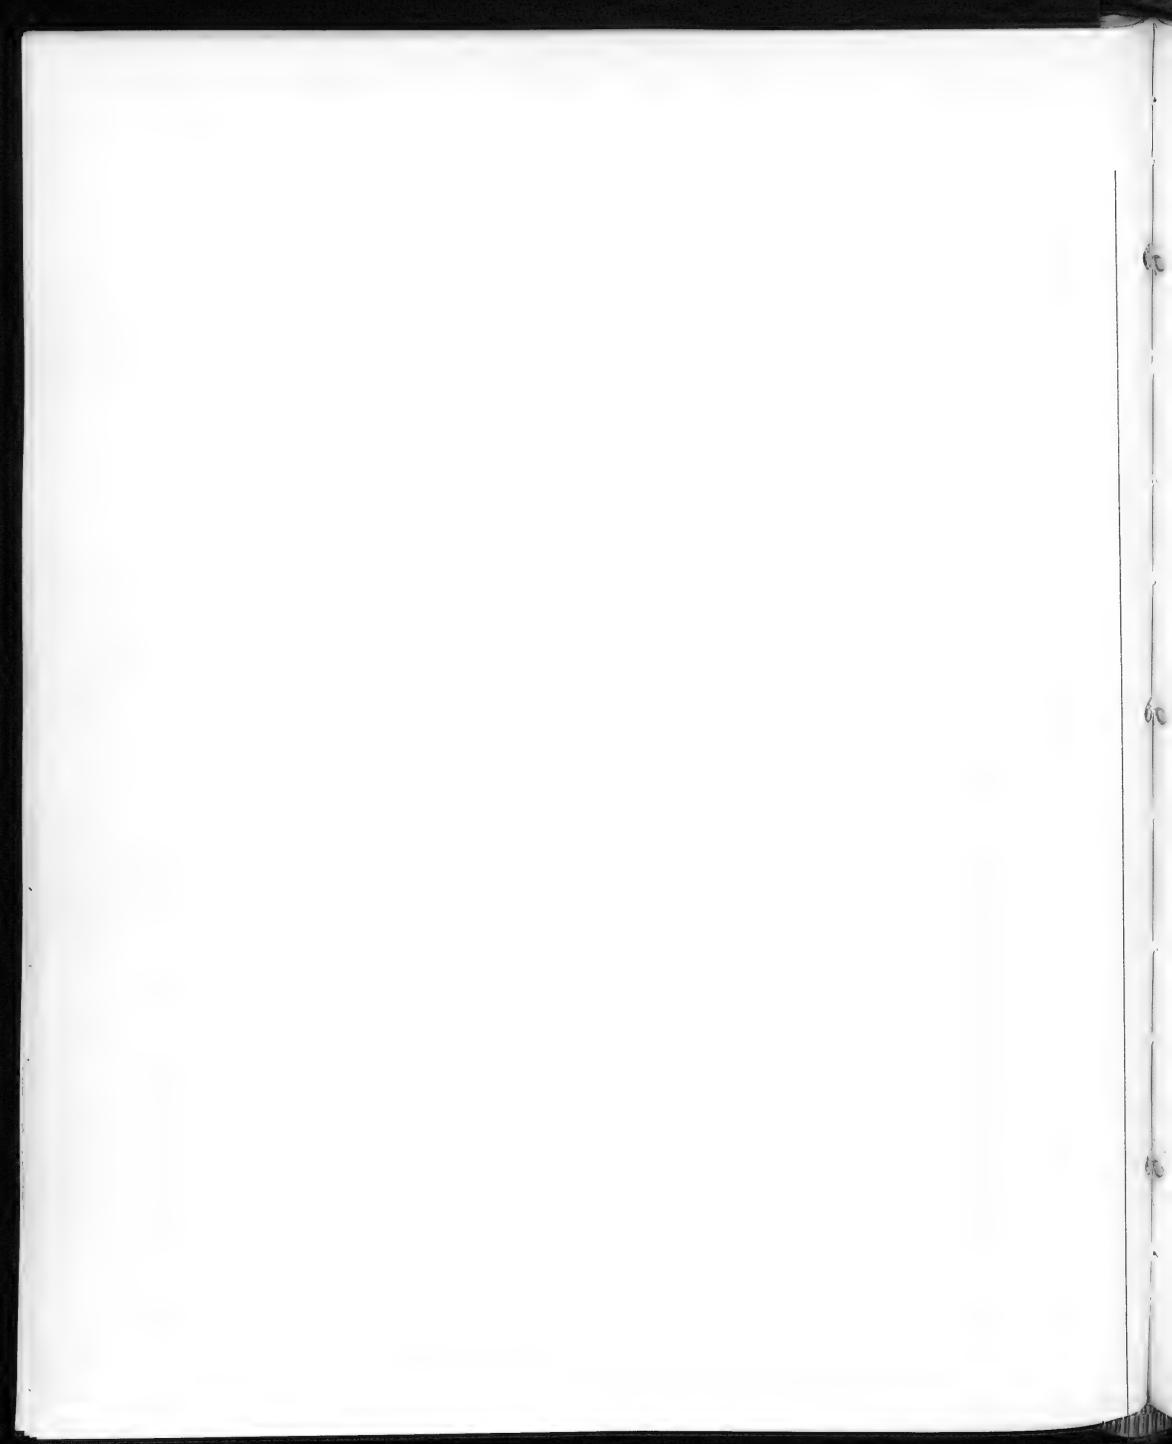

Left Lakeside at 4 A.M. and went down  
to Cambridge by fire track. Day rain-  
y and dark with S.E. wind. In the  
hitch saw two. One was a fine old  
"summer" walked deliberately across  
the road his tail raised and spread  
like a fan his puffs twitching, shaking  
his head as if he were trying to dis-  
locate his neck. When the fishes were  
within ten feet of him he stopped  
and stood erect and still looking  
like a bunch of withered leaves. When  
we passed he began picking at  
some berries. Saw very few small  
birds during the drive.

Return to

Cambridge

Partly in

the north

1888

Revere Beach, Massachusetts.

Oct. 23

Cloudy and warm wind S. W. threatening rain (which came heavily during the following night and day).

So Revere Beach with Mr. J. Dwight Jr. by 9 A. M. train. Left the cars at Point of Pines and spent the first two hours in the hotel grounds which were swarming with birds a heavy flight having evidently settled there the previous night. There were about 200 D. coronata, a number of Ludus pallasi, many Sparrows, chiefly Junco & White Throat with a few Field & Swamp Sparrows, some Kinglets (R. atrorufa and a single Dendroica p. hypochrysa). I shot the latter, a ♀ Junco, and a fine adult ♂ Swamp Sparrow.

We next crossed the railroad and began to beat the salt marshes. Dwight started a Pooculus princeps which flew past me. I missed a long cross shot at it but soon afterwards flushed it again & killed it.

The tide was nearly at full flood and we began searching for Sharp-tailed Finches in the beds of long salt grass that fringed the river and its tributary creeks. In nearly every bed of any extent we flushed one or two of these birds and in the course of the next two hours killed twelve - all that we saw. We shot them all flying. They invariably ran wild at first but after the first run lay rather closely. They looked very blue and small & flew with a slightly undulating motion. Dwight got seven of the twelve. He also shot a Cistothorus palustris. There were a few Killdeers flying about over the marshes.

Charbonneau joined us at noon. After lunch I shot another P. princeps which the train started from the railroad embankment and which settled in the marsh when I flushed & killed it.

At the "Narrow Gamp Hotel" we hired an old and very

Early day in which at some risk we crossed the river to  
the marsh on the Eastern R.R. side. As we landed a  
Yellow-leg (*J. melanoleuca*) soon and circled around us  
keeping just beyond gun range. On this marsh I  
tried to start any of the Finches but D. & C. found  
two one of which they bagged. We saw a Cormorant  
(*P. dilophus*) flying over the bay. Off the beach there  
was the usual great bed of Herring Gulls. No Ducks  
were observed.

The salt marshes are very beautiful at this season  
when the grass has been left uncut. Its color varies  
from russet to deep wine red. There is an *Exquisitum*,  
very abundant in places, of a brilliant coral color.

1888

Concord &amp; Weyland, Mass.

Oct. 26

Clear and warm for the season; clouds gathering in P.M. Trip up  
Wind N. E., a storm threatening later in the day. The railway

With Chadbourne took 6.30 A.M. train for Concord. River from  
Found my boat (which has not been used since June) all Concord to  
safe and launching it started up the river. Found the Weyland  
water nearly as high as in April and most of the  
meadows flooded. A light N. E. wind ruffled the surface  
and helped us on our way when we chose to use the  
sail. Just above the town in the alders at the opening  
by the Cattle Fair grounds we found a flock of six Rusty  
Blackbirds with which was a young ♂ Red-wing. Failed to Agelaius  
get a shot at them. Just above Friends Bend saw  
a Buteo, probably B. lineatus. Opposite the Cliffs made  
& beat for Lowell. On the edge of some tall scrub "Dun"  
ground & pointed a bevy of about twelve. They were Scial shooting  
wild and the result of three barrels fired after them  
was only one broken winged bird. Followed them into  
the scrub, a perfect tangle with most of the oaks still  
in full leaf. Fired a number of shots, most of them  
on points, but got only one more bird. Flushed a  
Green Heron. Kept the place at 2 P.M. & kept on up  
river. Started a Heron (A. herodias) at the place where Ardea herodias  
we were.

Just beyond Martha's Point saw a Kestrel, a very  
brown one. It alighted in a thicket near the  
bank & Chadbourne fired at it from the boat but remains the only  
missed.

sailed from Fairharow nearly to the bridge at the  
head of Sandbury Meadows. The water was about  
three feet deep over the marshes & disregarding the  
river channel we steered a straight course most

(Oct. 26) of the way after passing through beds of reeds which  
walled us on all sides against the boat. The boat  
was a rather dull one but the scene was un-  
dercut with the great expanse of water hemmed in by  
russet woodland and dark green pines.

Near the middle of the Sudbury Marshes saw  
a cove of seven scaup ducks (*A. marila*!) (White & C.)  
regularly over the marsh many times now rising against  
the sky now pitching down & skimming close over  
the water. Also saw four Red-winged Blackbirds,  
two flying high, two rising from a bed of tall reeds  
nearby our boat.

Just above the lower Hayland Bridge three ducks  
which looked very like Widgeon flew swiftly past  
us nearly within range. It was nearly dark  
at this time and quite so when we reached  
our destination. The water was so very high  
that we paddled up the brook nearly to the  
hotel where we spent the night.

Wareland to Concord, Mass.

1888

(Oct. 27)

Cloudy and misty with occasional showers of fine rain <sup>returning</sup> and heavy rain in the early evening. Wind S. by E. light. Warm river.

Took the boat at about 8 A. M. and paddled down the brook towards the river. Saw a Shrike alight on a tall, hophorn maple and passing within range I shot at but missed it. Chadbourne landed and pursued it but failed to get a shot. He started a Meadow Lark, however, and had three good Sturnella flying shots but missed them all. This bird was in a meadow when it lay rather closely rising within 30 yds. each time.

In the meadow below the railroad bridge we saw a single Duck flying, a small bird, perhaps a Hooded Merganser, but too far off to be surely recognized.

In the Sudbury Marshes proper we started three Black Ducks from the grass and saw the flock of scamps observed yesterday evening. They were flying about but did not alight. Anas obscura

Landed at the foot of this meadow and lunched in a pine grove on the crest of a knoll. Some Chickadees, three D. striata and a Cuthra feeding about us, jays screaming in the distance. A flock of seven Crows came into the pines and alighted directly over us. We rose & they flew when we both fired at the same bird bringing it down. It proved a superb specimen. All this time it had been raining hard but the rain ceased as we re-embarked. Landed next at the hill below the bridge and took a long tramp back into the woods following a deep valley between two oak clad ridges. On one of these "Down" found a Grouse which he pointed so stunningly that I made a circuit getting above the bird which C. Grouse shooting

(Oct. 27) remained below. Finally the Grouse started and came out past me over an open field. I missed with my first but killed with the second barrel. Saw nothing more at this place excepting a few Jays, Sparrows etc.

Landed next about half a mile below Partridge Brook and made a short search for a Hairy Woodpecker, Peis villosus which we heard calling in some oak woods. Failed to find anything but some Jays.

When we crossed Fairhaven it was beginning to get dark but we landed opposite the cliffs and beat a wood field in the hope of finding the Screech Owl seen yesterday. In this we failed but I shot a Shrike in an apple tree on the crest of a knoll.

Sarrinus bor.

It was a very brown specimen and, I think, the same bird seen on the 26<sup>th</sup> near MacMillan's Point. While at this place we saw three large flocks of such Blackbirds flying up river to the old town roost in the bottom bushes at the Bay. There must have been over a hundred birds in all.

Blackbirds  
flying to roost  
at Fairhaven

The remainder of our voyage was uneventful but very pleasant despite the rain which poured down miserably most of the time. At the Massena the trees were dripping incessantly into the first river in which the lights of the houses & bridges were reflected on every side. It was one of those soft, peaceful rainy nights peculiar to this season and very good to be out in

Spinnick, Massachusetts

1888

Oct. 30 Cloudless & cool with N.W. wind blowing nearly a gale at times. A radiant & blue day with bracing air as pure and transparent as possible.

To Spinnick with Chadbourne by 7.30 A.M. train. Took a boat at Stone's and started down river with a strong ebb tide in our favor but the wind more or less ahead, & an ugly chop sea running in the tide rips. Landed first on a marshy island opposite the neck & beat the sedge for Ammodramis. Flushed only A. candacutus one which I shot - a typical Candacutus.

Landed next at the sand hills. A flock of Horned Larks swept passed just and I dropped one. Spent an hour or two beating the beach grass for Sparrows. I shot in succession a Savanna, two Spinnicks, and one Tree Sparrow making, with the Sharp-tail & Bark, six birds killed flying in six shots & this with the wind blowing nearly a gale. We saw several Savannas but only the two Spinnick Sparrows.

Lunched in a sheltered, sunny nook on one of the highest points of the sand hills where they merge into the great pasture hill. Looking off over the channel to Plum Island and beyond the view was unusually fine with white capped waves rolling and heaving as far as the eye could reach and the sand hills of the Island gleaming in the sunlight nearly as white as snow. In mid channel a large sand spit was crowded with Herring Gulls, over 100 birds at the very least. There were many Ducks, also, mostly Oldsquaws & Pintails. Three or four miles out to sea I saw an immense flock of birds which I took to be young Scoters. They were

6.50 the water for a mile or more flying in a wide bar or ribbon which was apparently two or three hundred feet long and ten or twelve feet broad. This ribbon looked ~~very~~ brown in color.

After lunch we climbed the great hill and descended to the southern side. Here we found a ploughed field of perhaps ten acres fairly swarming with Horned Larks. There must have been at least 200 assembled there scattered over the entire field. However the eye rested for a moment several could be discerned creeping like mice along the furrows or crossing their intervening ridges with here & there a single bird standing erect and still on a prominent clod or rock his yellow throat and black cravat conspicuous in the strong light. After we had fired a few shots at them they all left this field and scattered over the grassy hill tops where we followed them about for two or three hours killing about a dozen each. Most of my shots were at single birds, flying, and I missed very few. After returning to the boat I added eight more larks to my bag. These were killed on the flat near the landing. To this place they came in great numbers alighting on the beds of coarse pebbles where it was most difficult to see them. Chadbourne killed a pair & I another single bird on a strip of salt marsh on the way up river. We reached town about dark (5 P.M.).

Besides the birds above mentioned we saw a few Crows (not above a dozen) but no Hawks or Owls. I had expected Snow Buntings but not one was either seen or heard.

Wellesley, Mass.

1883

NOV 2

Clear and warm (Ther. 70° at noon) with strong S.W. wind.

To Wellesley by 7:30 train meeting Doctor at the station. He had a horse & carriage waiting and we started at once, driving about two miles out of town and, leaving the horse tied by the roadside, began the day's hunt by beating a range of birch swamps & runs. In them we found two *Parus*. I did a long shot at the first which went out by D. who thought it badly wounded. It flew through an orchard, past a barn, & when last seen was skimming, low down, over an open field in which it probably fell dead. The second was behind me on the edge of some scrub. Wheeling & cocking one barrel I killed this bird within thirty yards. In some oaks beyond the Baker pond we flushed a third *Parus* which was very wild & went off unshot at.

Ruffed Grouse  
shooting

Next entered an extensive woods of white pines, fine old trees with many dead stubs & fallen logs, altogether a remarkably primitive, straggly forest for this part of the State. Saw no grouse here but the woods were alive with small birds, at least 50 Fox Sparrows, half as many Junco several Hermit Thrushes, Chickadees & Creepers, two Kinglets, *H. atrapa*, and six *Sitta canadensis*, and a *Parus villosus*. I shot at the latter & hit it hard but it "towered" high, over the woods and drifted off out of sight.

Small birds.

*Sitta canadensis*  
*Parus villosus*

Lunched near the bank of the river on the edge of a large field where I found bread "droppings" in the side of an ant-bill but failed to find the

(Nov. 2) Quail. He flushed a Grouse, however, within 50 yds.  
of the spot where we lunched and I shot it.

It was a very red bird (skin preserved). Another,  
greatly red apparently, was flushed twice in the  
same woods. Denton shot at but missed it.

On our way to the next cove, we started  
a solitary Snow Bunting from the roadside. *Phe. nivalis*  
I shot it.

He next left the horse near the "apparition"  
the river locally known as the "Duck Roost"  
and finished the day by a long hunt up  
several birch & alder runs. In one a Grouse was  
above the trees. I dropped it with a broken wing  
and a moment later D. seeing it running in  
a path shot it again killing it. In another  
we found many old and a few perfectly  
fresh Woodcock signs, and D. finally flushed  
the bird, a small ♂, on the edge of the cove.  
He shot at it but missed when it hove up by me  
about 50 yds. off and I killed it. My bag  
is a the day was three Grouse & a Woodcock killed Woodcock  
in five shots.

After leaving this cove we drove to the Hamwell  
place where the gardener told us that Crossbills  
are found throughout the year. A flock was  
seen by him this morning. He is very sure they  
breed on the plain, which has many large Norway  
spruces.

*Boya americana*

Saw numbers of Robins, one Phoebe & several  
Downy Woodpeckers.

The fields as still as green as in summer. Most  
of the leaves in the woods have fallen.

1888

Nov. 6

Cloudy morning clearing at 10 a.m. Afternoon partly cloudy partly clear. Day warm - Ther. 70°. Strong S.W. wind.

With Spelman started at 9 a.m. for the Bryant farm in Bevington where according to popular rumour many Donald have been seen of late. We set off in a conrod buggy taking "Don" of course. Near the further end of the Wilsons saw a fine adult Buteo lineatus soaring over the road. Nothing else - save a few Crows - was observed on this drive.

Reaching the Bryant farm we stabled our horse and crossing the fields to the south began to beat the range of birches, alders & wind fields when, on my last visit with Robert Nettitt ten or twelve years ago, we shot several Grouse in a bog meadow among tussocks of tall grass.

Scarcely had we entered this meadow to-day when "Don" drew to a doubtful point holding his head high, a puzzled expression about his face & attitude. I was working out to him over some very soft ground when a large fox started about 20 yds. to windward of him & galloped quickly out of sight.

Fox

This entire area with its bordering fields proved blank as far as game birds were concerned but in the Orders we found a large flock of Robins and in a maple swamp I shot a ♀ Picus villosus. Don made some fine points at a flock of pigeons in a grain field and I took several photographs of him.

Picus villosus

Crossing the road to the north side we spent the afternoon beating the birch swamps and bogs lying in that direction. We saw several flocks of Robins, some Blue Jays etc. but no game birds until we reached the edge of the meadow where "shot" made several points on Grouse years ago. Here in a belt of alders "Don" came to a stand. I stepped in ahead

and flushed two Grouse getting a fair shot at ones but  
missing the. Shortly afterwards the pointer found one of  
these birds a second time and stood it staunchly among  
scrub oaks on a hillside. I & reloaded and shot it  
He could find nothing more so returned to the barn,  
branched the horn, & started homeward.

Ruffed Grouse

Reaching Prospect St. & finding that there was still  
a brief time of daylight we tied the horn & beat the  
birch runs. Found no game but saw some "dustings"  
of Quail among oak scrub. There was an immense  
flock of Robins here, in birches, fully one hundred birds.  
They passed over us on their way to a roost on Rock Meadows  
I shot one as it went over me. We saw many going  
in the same direction from other quarters. Saw, also, five  
Field Sparrows among some bushes.

Munda. nig.

Spar. pusilla

The day's adventures closed here on our ride home being  
in the twilight.

Spruce, Massachusetts

1888

Nov. 8

Cloudy; wind N. E. a storm gathering all day & breaking at nightfall.

To Spruce with Spelman & Denton by 7.30 train. Took a boat of Stone as usual and pulled down to the mouth of the river. The tide was low with the young flood coming in strongly, and we had a hard row before we reached the Neck where we landed. Denton who spent the day on the great hills to the north of the river. Spelman and I crossed the river and landed at the sand hills. Crows were flying south in considerable numbers. He saw them all down the river, at its mouth, and over the great sand hills, perhaps 200 birds in all. Spelman got a shot at one but missed. He also had a shot at a pair of Sheldrake which flew over the boat but missed them also.

Flight of  
Crows.

Most of the forenoon was spent beating the sand hills for Sparrows. They were more numerous than I have ever seen them before and I killed twelve, eleven of them, including one double shot, flying. I did not miss a single bird but had to shoot one wounded one over again. One I killed on the salt marsh flushing it from a ditch. The beach grass is unusually luxuriant this year and afforded such perfect concealment that nearly all the birds were very close and were hard to start.

Shortly after lunch we climbed the big hill south of the Sparrow ground and north of the lighthouse. We had seen and heard shore larks and Snow Buntings at frequent intervals during

100.5  
in, moreover, most of their "trading" between the  
neck and this big hill so that we expected to find  
the latter thronged with them. In this we were disap-  
pointed for there were fewer birds than than at my  
last visit. Still the number was large probably over  
a hundred Horned Grebes & perhaps fifty Snow Buntings.  
They were all in the ploughed field at first but  
after we had fired a few shots they scattered over  
the neighboring grassy slopes. I shot twelve or  
fifteen, nearly all single birds flying. I neither saw  
nor heard any Longspurs to-day.

There was a heavy sea running off shore & breaking  
on the bar. Many Gulls skating about. A lead at  
the base of the hill, Loons and Skuas flying in  
small numbers. Two of geese on the hill, perhaps  
Swans but I could not make sure. A single  
stark. Six Colaptes in a bushy hollow, all exceedingly Colaptes  
wild. A single Cormorant (C. didymus) flying high  
following the shore.

Returning through the sand hills I shot three Spheniscus  
(included in the twelve previously mentioned) my last shot  
being the double.

Started up river at 4 P.M. picking up Doulos at  
the neck. He had bagged a dozen birds, ten Horned  
Grebes, one Snow Bunting, & one Erumetes persillius. The Erumetes  
latter was accompanied by another Sandpiper which  
D. took to be of the same species. Both were very shy.

We had a delightful row up river in the twilight.  
The tide was very high but falling fast & hence against  
us but by taking advantage of the ebb we made  
rapid progress. Near the second bend of the river we  
saw a Bittern flapping low over the marsh.

Grantville (Wellesley Hills) Mass.

1888

Nov. 13

Clear, still, frosty. Ther. 25° at sunrise. Ground frozen and pool skimmed over all day in the shade.

To Grantville by 7.45 train with Spelman. The depot carriage took us out on the turnpike to the swamp behind Henshaw's and returned for us there late in the afternoon. Our days beat was over nearly the same ground that Henshaw and I traversed last year leaving out that behind Heekles.

In the first swamp by the turnpike a Grouse started behind me. It was forty yds. off before I could wheel and fire. My shot brought a cloud of feathers but the bird kept on and we could not find it again.

The second bird, a very red one, started from a brushy hollow where Henshaw shot a Woodcock last year. I fired and it fell in a curious way coming down lightly and gradually with its wings spread. It then spun about among the leaves making a great fluttering. When I got to it however its head was raised & it acted as if it might fly again but I caught it easily. Apparently its legs were wholly, its wings partially, paralyzed. It was a beautiful specimen without a stain or a feather missing.

My third shot was among low feathered pitel ferns in an old pasture. I saw this bird start from under a bush and run several yards before flying its tail, wide spread, catching my eye at once. When it rose I fired bringing it down stone dead. It proved a gray bird, like the first a ♂

(Nov. 13)

After this we started four more Crows but I had only one good shot which I missed with both barrels. The bird started within ten yards among some ~~leaf~~ oaks and made so much noise that it startled me and I fired wildly.

All the Crows seen to-day took very long flights and were hard to follow and find a second time.

The country was traversed was almost destitute of small birds. We saw a few jays, Chickadees and Tree Sparrows, one Creeper, a Hairy Woodpecker and two or three Crows but no Robins, Junco, Fox sparrows or Kinglets.

Spruce, Massachusetts.

1888

Nov. 15

Warm (ther 57°) and cloudy with heavy rain storm beginning about 10 a. m. and lasting into the night. Wind S.W. moderate.

To Spruce with Spelman & Denton by 7.30 a. m. train. Took a boat of Stone as usual and pulled down to the sand-hills making the distance very quickly as the tide was ebbing strongly in our favor.

Found many Horned Larks on the pebble banks and shot eight or ten. Then began beating the sand-hills for Sparrows. Started seven or eight and killed all but one. Later in the day shot three more on the same ground being two of them come in over the sea. I killed seven in nine shots, all flying.

Very soon after we entered the sand hills it began to rain and during the remainder of the day showers followed showers in quick succession. At times it fairly poured but having rubber boots & coats we kept on until three o'clock when we started back for town.

After leaving the sand hills we visited the great hill to the south. The ploughed field held a few Horned Larks but not above twenty were seen altogether on all parts of the hill. On the eastern ridge there was an immense flock of Snow Buntings feeding on the green turf—fully two hundred birds. Several of them looked like adult males in breeding plumage but I could not shoot one of these for the scattered birds forming the outer circle would rise and give the alarm. I shot three young birds when the flock departed. Shortly afterwards I came on a smaller flock. <sup>As they</sup> rose and whirled once down over the turf I distinctly made out a single Lapland Longspur among them. *L. lapponicus* Keeping my eye on him after they flock alighted again

*L. miralis*

*L. lapponicus*

(Nov. 15)

I walked rapidly towards him but when I was still at least 40 yds. away the flock rose again. I instantly fired a snap shot at the Song Sparrow and, although he had gained ten or fifteen yards by his flight, killed him.

Just before P. princeps and a few Snow Buntings & Horned Larks. He saw many Snow Buntings on the bank just above high-water mark. In all we probably saw 300 Snow Buntings, 50 Horned Larks and about 13 Spanish Sparrows. I shot nearly as well as during my last trip making one double at Horned Larks and missing my few fair single shots.

Crows were migrating all day in small numbers straggling along over the marshes and sand hills. There were fully 200 Herring Gulls in the river. At high tide they collected in a narrow "bed" on the marshes, at low water they were sprinkled over the flats. On the River marshes just north of Oak Island we saw a solid mass of these Gulls sitting at high tide on an elevated part of the marsh within 100 yds. of the railroad tracks. They covered about half an acre and presented a beautiful appearance.

Larus argentatus

While we were eating lunch a Tree Sparrow sang several times in a bushy hollow on the edge of the sand hills. There was a flock of about a dozen of them. I killed two of them at a shot. One was the darkest I have ever seen.

Spiz. monticola  
virgatus

The Snow Buntings were much tamer than usual. Several times I got within ten or fifteen yards of the outskirts of a flock. The great flock presented a fine appearance as they whirled low over the green turf.

P. nivalis

There were many Coots in the Plum Island channel & a pair of Sheldrakes in the river.  
Found a plant of the sea rocket (Kalila americana) in flower

## Grantville (Wellesley Hills) Mass.

1888

Nov. 17

Clear and cold wind N.W. - moderate all day.

To Grantville with Spelman by 10.15 A.M. train. Reaching the station we again employed the depot carriage to take us out a mile or two on the "Brook" road. Our beat to-day began at about the point where it ended during our last visit, and we covered nearly the same ground. In all we saw about ten Ruffed Grouse and a covey of three Quail. Six of the Grouse were in the westernmost piece of woods, one by the aqueduct bridge, and three in dense oak scrub on the great hill south of the turnpike.

I shot three Grouse and two Quail. My first Grouse started among dense oaks & birches & skinned off low over the ground. It fell wing-tipped near about 20 yds. and hid in a hollow among oak leaves, merely squatting. "Dor" found it easily but missed it for a specimen when he caught it by pulling out all but one tail feather. My second Grouse lay closely in dense oak scrub on the high hill and when flushed one Dor's point rose straight up like a Black Duck giving me an easy and nearly open shot. The third bird, a ♀, after being started and shot at twice lay as closely as a Quail on a steep hillside, open underneath, but with rather densely growing oaks interlacing their branches above. "Dor" pointed this bird very staunchly and, when I stepped in ahead of him it rose within five feet of me. There was absolutely no ground cover and it must have merely squatted among the oak leaves. Like the second bird it fell dead or nearly so, at

(Nov. 17) my shot.

I did not miss a really fair shot all day but fired a number of ineffectual ones at long range or through dense brush. In one place "Don" came to a point among barberry bushes on the edge of a meadow and three Grouse went out in different directions but all in such a way that they were covered by the bushes until nearly out of range despite the fact that the place was very open with nothing much higher than one's head.

"Don" found the Quail in a weed field. I shot one as they rose (firing only one barrel) and the other among thick scrub on the hillside to which they retreated.

In all "Don" made probably a dozen stunnet points on Grouse. The scent was evidently very strong all day owing, probably, to the fact that the leaves were soaked by yesterday's rain.

We saw almost no small birds. A few Blue jays and Chickadees, a flock of about 20 Chrysomitris tristis, a Tonotrichia albicollis, and a Woodpecker not identified but probably a P. villosus.

Grantville (Wellesley Hills), Mass.

1888

Nov. 28

Clear and for the season mild with soft S.W. wind.

To Grantville, alone, by 10.59 train returning by 5.10 P.M. train.

Spent the day hunting Grouse going over nearly the same ground covered during my last visit with the addition of a large tract of open chestnut woods which I have not previously explored. Ruffed Grouse  
Hunting

In the first cover started a Grouse among thick young oaks and fired a further snap that at him at the western extremity of the same woods "Don" put him up again, running in on him. I was out of shot most unfortunately for he towered straight up to the tops of the birches. Crossing a wide field he disappeared in some chestnut woods beyond. Following on we found him again the dog pointing him this time. I had a fairly open but rather long cross shot and missed.

On the edge of a run beyond I put up two fresh birds. Both were rather wild and my shots at both proved misses. Following up thru bird "Don" found one among some oak scrub and I killed it on a stump point. The other I flushed from a fallen beech top but failed to get a shot at it. It went only about 200 yds. and "Don" flushed it among some upturned stumps. I had an open but long cross shot and missed. The bird crossed a wide stretch of mowing fields and I failed to find it again in the woods beyond.

During the remainder of the day I tramped steadily through various kinds of cover but with such poor success that I did not see another

1888

Dec. 14

Clear and very cold. Therm 0° at sunrise (Cambridge), 12° at sunset (Great Island). Wind N.W., very strong all day.

Started for Great Island at 8.15 with Mr. & Mrs. Cox. Reached Hyannis about 11 A.M. and drove over to the island at once. When near the pond below the house came on a Killdeer Plover by the roadside. It was sitting still with its head drawn in and looked as doubtless full, and grown. Saw also some Meadow Larks.

After lunch started out in search of Plover. It was bitterly cold with the creeks, marshes and even most of the Bay north of the island, frozen. The sand dunes also were stiff with frost and as hard as pavement. With the cutting wind, the broad areas of white shining ice, and the Gulls beating along the shores the scene was as wintry as possible and suggestive of Snow Buntings & Snow Owls rather than of Killdeer. Nevertheless we quickly came upon five of the latter feeding on the sheltered side of a hill in a pasture. They were very wild but tamed and scaled over C. who fired two shots and brought down one bird. At the report of his gun a flock of fully fifty Killdeer rose from a hollow and skinned off close to the ground flying in a compact bunch like Fringes. Shortly afterwards I saw seven more flitting about in a salt marsh where I could not get at them as a tidal creek intervened.

As I was returning to Cory a single Killdeer came in over the hills and swept down past him. He shot it and gave me the specimen.

Shortly after this Cory returned to the house but I kept on. Shortly after sunset I flushed a pair of Killdeer from a bit of ploughed land in a hollow. They

202. within twenty yards but before I could get off my gloves, cock the gun etc. were nearly out of range. I fired one barrel only and that without success. The birds alighted again in the marshes but soon the moment I appeared over the ridge although they were fully 200 yards away.

I also fired a long and fruitless shot at a Meadow Lark of which bird I saw at least a dozen.

House Larks were numerous in all the ploughed fields but I did not shoot at them to-day.

Reached the house at dark after a long and very pleasant walk in the bracing wind.

During the early part of the afternoon we drove around the park. On the east side saw a bird which we took to be a Podiceps lobellii sitting or rather lying on the top of a kale-covered rock several rods from shore. It raised its long, slender neck and watched us shyly but did not start although we passed within seventy yards or less.

Red-winked  
Grebe lying  
on top of  
a rock

## Great Island, Hyannis, Massachusetts

1888

Dec. 10

Clear and warm but still sharp & frosty. Therm. 20° at 8. a.m.  
Strong N.W. wind through forenoon. Dead calm in P.M. Sun  
warm and pleasant.

After breakfast went first to the place where we saw  
the Killdeer yesterday. Found three there this morning,  
feeding along the base of a steep ridge. I made a long  
circuit and came upon them from behind. The moment  
I showed my head over the ridge they started with shrill  
cries of alarm (kill-dee-kill-dee-kill-dee, kill-dee-kill-dee).  
Although they rose within fifteen yards they doubled &  
twisted so that I succeeded in firing only one bird but  
that was effectual the bird dropping stone dead on the  
ground at the base of the hill where it lay with its  
beautiful tail spread out like a fan.

We next drove to the deer forest through which we walked  
starting about 9:15 a.m. among seven pine tracks.  
Seven started in one herd in the great opening  
presenting a most beautiful sight as they bounded off.

In some dense pine (*P. rigida*) woods at the east end  
of the park we came upon a mixed flock of small  
birds, about ten Chickadees, several Kinglets & Nuthatches  
(*S. canadensis*) and two *Chrysomitris tristis*. The latter I  
killed at one shot. Hearing the Nuthatches whining in  
peculiar low excited tones and incessantly, I went in search  
of them and found them dancing about among the  
branches of a bushy pine. I suspected an Owl and looking  
closely soon discovered one sitting erect and still on  
a horizontal branch. It looked gray and saggid like a  
weather-beaten piece of bark. I took it for a gray Scops  
but on shooting it found I had a *Nyctale acadica*.

I gave the specimen to Cory.

(over)

*Sitta canadensis**Nyctale acadica*

(Dec. 15)

Returning to the house I began shooting Horned Larks. My first four shots were two successful doubles. The second bird of the second double proved to be a fine young ♂ *C. a. pratensis*. I killed it at fully seventy yards range and directly in front of the house in a ploughed field where these birds come to feed at all hours of the day.

Encouraged by this prize I set off again driving to the peninsula called the "Cow-pasture", here over some extensive grassy flats Horned Larks proved to be numerous and I shot ten in the course of an hour all but two being killed flying. The ninth bird was another *pratensis*, a beautiful adult ♂.

At the lunch we drove to the duck boxes, where C. had had holes cut in the ice. In these openings some wooden decoys were placed and sitting into tin can-like boxes we sat patiently for upwards of two hours. Not a Duck came within sight of either of us during this time. Through my loophole I saw only an occasional distant Gull or a flock of Horned Lark's skimming over the snowed hills.

Just before sunset we left the boxes and went across the marsh to the beach ridge. Here I flushed a Meadow Lark from the beach grass and shot it, a ♀ in fine plumage. As it had now become chilly we started back for the house on foot and walked as far as the bridge before the carriage met and took us the rest of the way.

On reaching the house as there was still a little day light I started out into the snowed hills to the south hoping to find a Meadow Lark. In a hollow filled with dense beach grass I flushed two firing a barrel at each and killing the first a large fine ♂.

1888

Dec. 16

Clear and warm with strong S. wind, late in the P.M. the wind headed into the S. E. the sky clouded over and the day closed chilly gloomy and threatening a storm to-morrow.

Spent most of the morning hunting Horned Larks using a best 20 g. gun which C. has from Reads on trial. In the fields near the house I got eight or ten shots beginning rather badly with several misses. In the "Cow-pasture" I found only one flock of birds at which I shot down or eight times killing nearly every shot and making one double. In all I took about twelve birds all typical *O. apertus*. I gave them all to Cory.

Returning C. joined me and we drove to the deer forest through which we took another long and very interesting walk starting many deer (all does) but being nothing to shoot at. The forest has played havoc with the small game in the park and there are but few Pheasants or White Hares left. We saw none of either.

At 11 A.M. C. went back to the house while I crossed the mud dunes to the beach near the boat landing where I lay for an hour or more concealed behind a pile of boards hoping for a shot at a Gull. There were many *L. argentatus* beating up and down along the line of breakers within easy shot of the shore but all of them kept off out of range as they passed my ambush. How they discovered my presence I am at a loss to imagine for I was perfectly concealed. Six or seven Crows came along finally beating the beach like Hares. I had a good double shot at them but missed my first bird. The other fell into

(Dec. 16)

the water but the strong wind soon brought it ashore.

As I lay in this ambush it was interesting to watch the ducks diving off shore. In one flock there must have been fully two hundred Histrions and small bunches of Histrions and little groups of Oldsquaws flecked the water in every direction. Some of the latter came within seventy yards or less of me.

On my way back to the house I flushed a Passerculus princeps from the crest of a ridge covered sparingly with beach grass and Hedonia. It flew over the crest of an adjoining ridge and I failed to start it again although I searched long and closely for it.

In the afternoon we tried the duck boxes again. There were large openings in the ice to-day and about one of them fully two hundred Black Ducks sat huddled closely together. Four others were standing well out in the marsh. The latter allowed us to drive past them and slipping out I crept to the crest of a knoll and fired a shot at them from C's 8 gauge single barrel at about 150 yds. range. All four went off, however, as did the big flock on the ice. We then took to the boxes and spent two fruitless and very stupid hours without getting a shot.

Late in P.M. we crossed the marsh to the beach ridge C. Killing a Killdeer Plover by the way. On the ridge we concealed ourselves in some open boxes and watched the bay side for an expected evening flight of Histrions. Four flocks passed us, two out of range, one nearly over my stand but very high, one over C. I missed my flock with both barrels. C. killed one bird from his flock dropping it within the 8 gauge at about 80 yds. It was a ♀. The flock that passed over me was composed wholly of adults. We returned to Boston by the 7 A.M. train on the 17<sup>th</sup>.

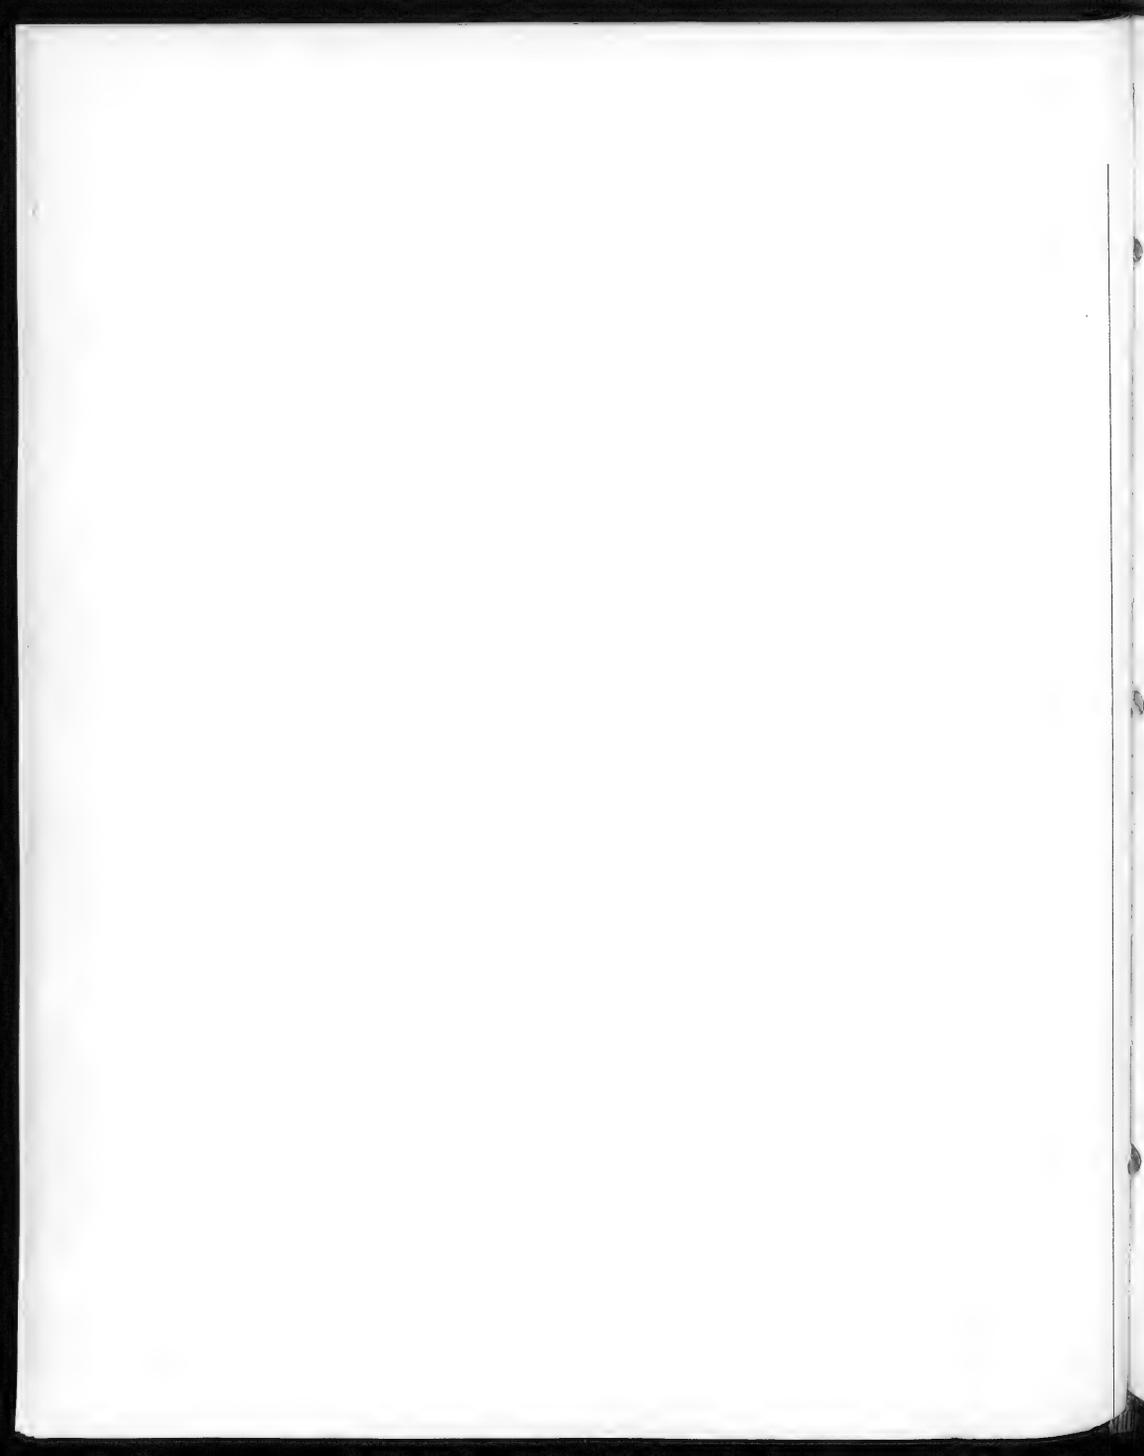

Washington, D. C., to Richmond, Va.

1889  
Jan'y 19

Clear and cool.

Left Washington at 11 A. M. for Charleston S. C. The country between Washington and Richmond along the line of the railroad is similar, in general appearance, to Massachusetts being very broken and hilly with deep ravines. Cornus inops seems to be the most numerous and characteristic tree. There are many oaks of various species, all leafless of course. The fields are brown and bare but in some of the towns the grass was faintly green on sunny banks. I saw few birds. Two large flocks of Agelaius phoeniceus and a single Zenaidura near Quantico. In places immense flocks of Crows faintly blackening the fields. Cathartes aura almost constantly in sight. Not a single Duck or other water fowl off the fifteen miles or more of Potomac above which the railroad skirts.

After passing Petersburg, Va. I saw a few Corvus (Corvus), and innumerable Sparrows which rose from cornfields and stubble as the train passed. I took them to be Poetes but could not make sure.

Charleston, S. C. to Sanford, Fla.

1889

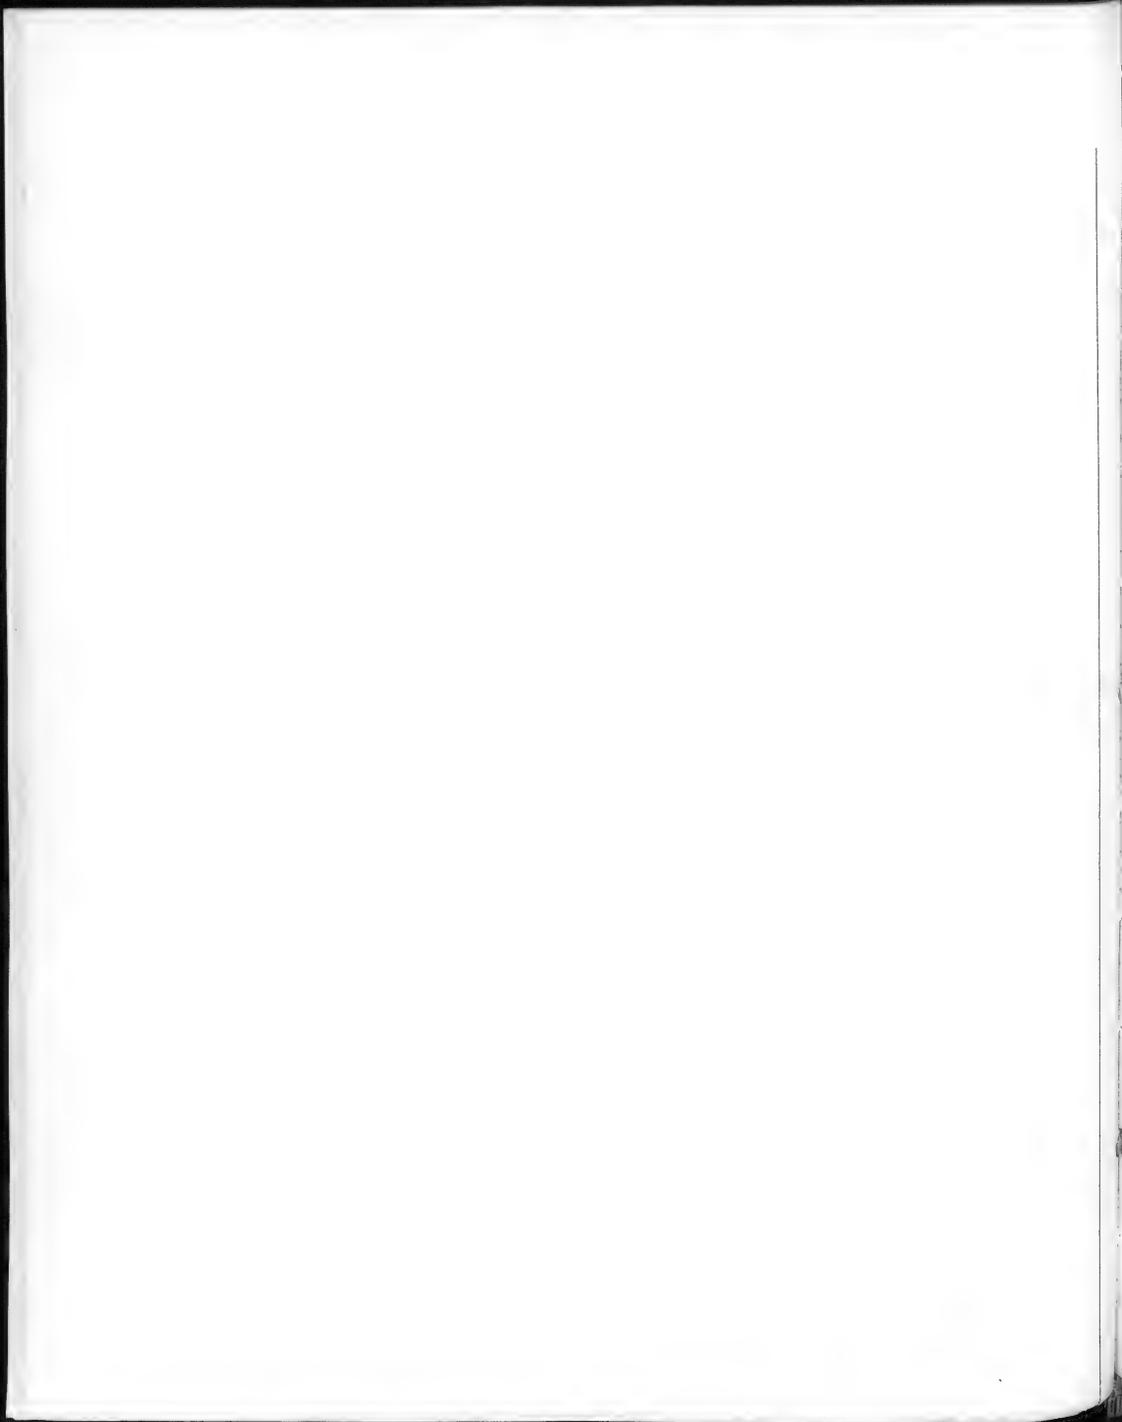

January 30

Clear and rather warm.

Left Charleston at 7 a.m., joining Cory on the train by appointment. We reached Savannah about sunrise. South of Savannah saw palmetto became abundant but it was of low growth, not one 2 ft. high as a rule. South of Jacksonville it became higher (4 to 8 ft.). The true palmetto became numerous at Jacksonville; also water lily leaves ("bonnets") very green and attractive to the eye. Near Green Cove Springs saw in bloom a few wild blackberries and an elder which looked like ones having similar large showy cymes of whitish flowers. In the swamps the cypress and large deciduous trees were perfectly bare but many of the softening wet gums were scantily covered with young foliage, the leaves perhaps  $\frac{1}{3}$  grown. At Drismore, a place north of Jacksonville we found *Bastonia* in bloom, a pretty little flower very like *Houstonia*.

During the day I saw about 30 Black Pulleys (not one *C. aura*) a pair of Killdeer (at Drismore) and one Crow - absolutely nothing else.

We reached Enterprise Junction at 6.40 and I got off to wait for the baggage (which was expected by the next train and take it over to Enterprise. After waiting three hours (during which I had a long and very interesting talk with a "plum hunter" of the region) the train came but neither baggage nor dogs did it bring. Accordingly I took it and went to Sanford for the night, Cory having gone on to the same place by the earlier train.

Sanford, Florida.

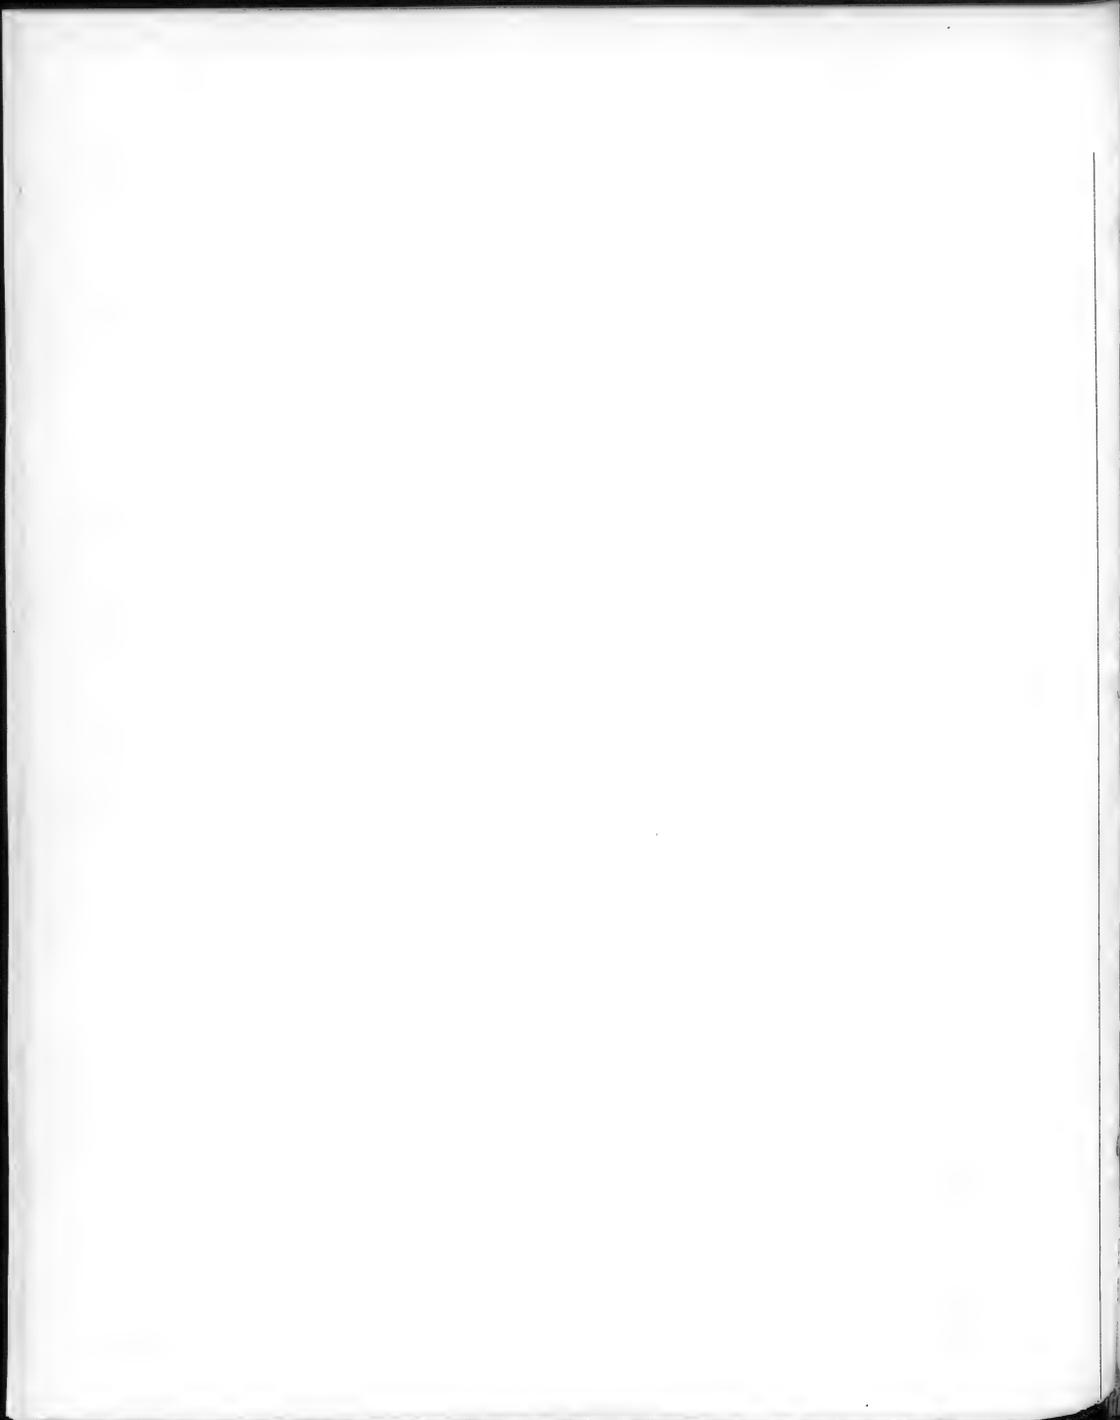

1889

January 31

Cloudy and mild with light S.W. wind.

Spent last night at the Sanford House and had about two hours to wait this morning before the steamer arrived to take us across to Enterprise. All the birds recorded in my field list under the above date were seen near the hotel, most of them along the lake shore, in a belt of palmetos or about the garden. In these palmetos were fully 75 Lusitana major, very noisy making the corn stalks rattle and flopping from tree to tree. Apparently they make this place their rendezvous if they do not breed in it.

There were two Mocking birds and perhaps a dozen Yellow-rumps (D. coronata) in the garden, the Mockers silent of course. A Tit Lark (vertens) flew over the hotel several times and when we went down to take the steamer I saw him alight on a shed near the end of a long pier.

Enterprise, Florida.

1889

Feb. 1

Clear and cool with N. wind.

Off at 8.30 A.M. getting back by 3.30 P.M. Drove about 18 miles, most of the way through open pine woods, much of the time working the dogs (a black Gordon and a black & white "field trial") from the wagon. They ranged superbly and found two birds of Quail, pointing both. Cory shot two from the first covey but lost both in palmetto scrub. I fired three birds and missed all of them. From the second covey I shot two and C. two. I also shot a single bird from a covey in the palmetto scrub. As we drove through the pines, following our path, we started several *C. cristatus* and large flocks of *Sturnella*, *m. mexicanus*. Bluebirds were numerous in the trees and we saw a pair of *Picus borealis* but very few other birds & to my surprise, only three or four *Icterus pusilla*.

We next drove to Shore Hill Prairie a large expanse of marsh, partly flooded, partly dry or rather only muddy. Here we began to beat for quail of which we started 14. Of these I killed eight, missing only one bird & lost C. five. They were well scattered and lay like stones. At the first report of our guns clouds of birds rose all over the marsh. There were fully 200 *Quercus*, 3 or 4 *Ardia egretta*, about 8 *A. ludoviciana* and perhaps a dozen *Hirundo*. Besides these there were some 25 *Tachycineta bicolor* and a single Tit lark. We also started a Plover and a *Sturnella* killed Marsh Wren. Meadow Lark

were scattered all over the marsh in large flocks. As usual they were absurdly tame.

In the afternoon we hunted Quail starting two bevis, one of four birds only killed them all in pine woods, the other of about 18 in tall broom grass. From the latter we shot four birds.

On the way home saw two *Buteo l. alleni* sitting in low pines by the roadside. One, a young bird, allowed us to pass within 50 yds. We also saw several *Ardea herodias* and one *A. egretta* about ponds in the woods.

On the drive out in the evening saw my first Florida Jays, two, in oak scrub by the roadside. They were very tame and I easily secured both of them.

Enterprise, Florida.

1889  
Feb. 2

Clear, cool in the evening, warm at noon.

Spent the certain day hunting snail along the road to Orange City, starting at about 8 A. M. and getting in before breakfast. I started nine bevis and shot down thirty-five birds of which we each shot fifteen independently, five falling to both gun fired simultaneously. Of these however, six were lost as neither of the dogs is a true retriever. On two occasions we both made a double shot but two birds were lost of the first and one of the second.

The dogs worked bravely in the forenoon but were nearly useless in the afternoon as both became very tired. They pointed very bravely however, and about all the single birds. The black dog found all but one very but "Robin" backed him staunchly on each occasion. When we stopped for lunch we discovered three fine letters pointing a bevy of birds within ten yards of the horse boxes in the dense ground peanuts. The black dog usually drops at point.

I shot poorly at bevis in the morning but missed only two single birds. In the afternoon I had only two chances, both at bevis, both times killed my pair of birds.

We saw many small birds. Heard Florida Jays in oak scrub, Flickers (one singing) among the pines, a few Ground & Water Doves, about fifty Meadow Larks, a pair of Centurus and about fifty Robins.

An old field grown up to weeds and  
broom hedge was fairly alive with Sparrows.  
Most of them were *C. passerinus* but I saw  
fully a dozen *Peucaea aestivalis*. One was so  
tame that I thought it wounded and  
nearly caught it in my hand. Heard  
a Pine Warbler and a *T. lilius* singing. Nothing  
else in song yet, not even Cardinals.

Most of the country covered to-day  
was open pine woods with but little ground  
scrub. We found four beavis of *beavis* in  
the space of eight or ten acres. They are  
tame when they have not been hunted,  
and often fly only thirty or forty yards  
before alighting again.

I shot a fine adult *Ardea ceryle* from  
the wagon. It was sitting on the top of  
tall dead pine by the roadside near  
pool of water.

We found many small balls in trees  
of which numerous *Quercus* (*Q. prinus*) were  
scattered about.

Centerville, Florida

1889  
Feb. 3

Clear and cool with N. wind.

Did not hunt to day but spent the forenoon driving C. taking a 22 cal. collecting pistol with which he shot one and 9 two Florida jays in an old field grown up to oak scrub. We saw fully eight of them here. They were very tame, alighting on fence posts & the tops of the oaks when they sat erect and still. There were also many Towhees (*P. alleni*) in this field.

In a hollow by the edge of a marshy pond hole we saw a fair *Garrulax* with apparently long plumes. It was within 30 yds. of a bare log behind which C. shot at it with a revolver but missed.

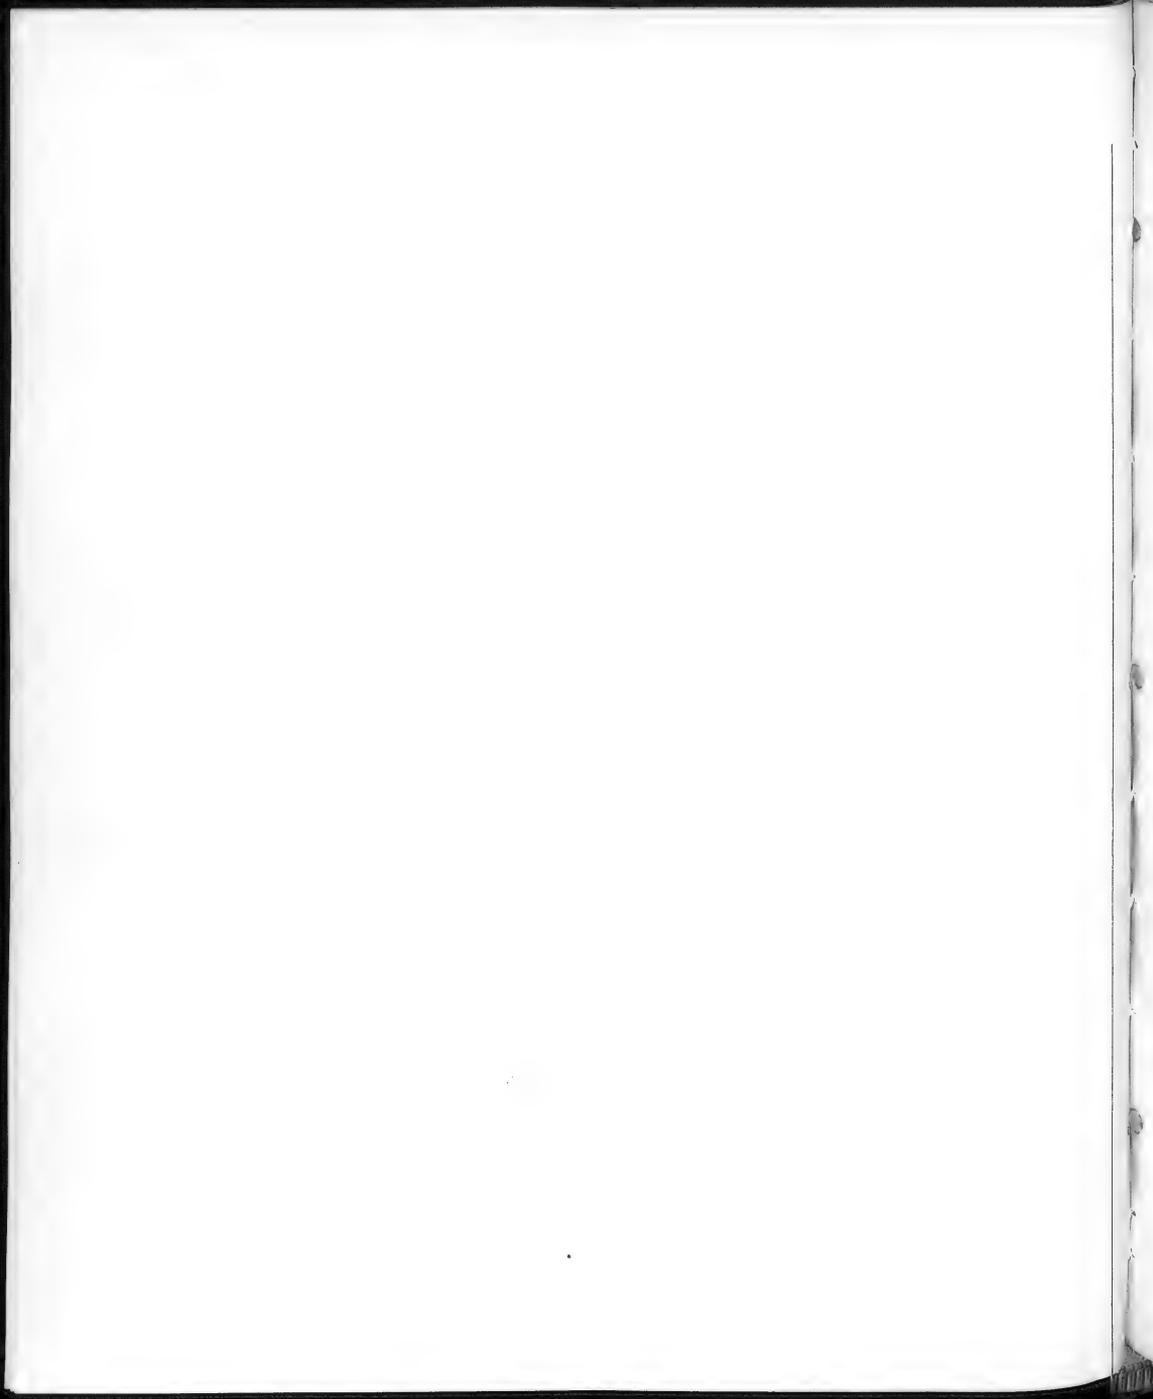

In some burnt scrub we saw a single adult ♂ *Geothlypis trichas*.

Along the roadside there were many common birds and one Dead, *Lepostrogna* among many trees *R. palmeri*.

On the way back visited a famous Indian shell mound. Saw House Wrens and Cardinals near it.

<sup>the most</sup> *Hamelboms*, in full bloom everywhere by the roadside; also yellow *gissurina*.

In some burnt woods (pines) *Ceratiola circoides* a curious new-like shrub (allied to *Empetrum nigrum*) formed a dense undergrowth two to six feet high. I collected specimens of *Andromeda ferruginea* which was common in moist places along the roadside.

Eastern Prairie

1889  
Feb. 4

Clear and warm, Ther. 70° at noon.

Spent the day in shooting during the day  
at home. Drove first to Horse Hill Prairie  
where we started a large flock of birds killing four  
of them. Then to Dago Prairie a long drive  
through the pine woods, most of the way  
following us and. Reaching the prairie  
we had soon on our side without starting  
a bird seen smacked in a isolated grove of  
palmettos. After lunch heard heavy firing  
on the other side of the prairie and seeing  
over there some Mr. Crossens working a  
brace of red setters and putting up traps in  
great numbers. He was soon in the middle  
of them and in the course of a half hour  
bagged nine or ten birds each. Moving on  
a few hundred yards we struck a fresh  
lot and repeated the experience. All the  
birds were scattered about and lay very  
close. Later in the afternoon, however, as  
we were on our way out of the prairie  
we started a perfect cloud of birds which  
acted very oddly, flying at long range and  
flitting or wheeling a few rods at a time.  
Occasionally one or two would lie more  
close and after we had fired a few  
shots and scattered the birds we had  
fire shooting. I made two double shots  
in succession and missed but few  
birds all day. Our total bag was 44 birds  
of which I killed 21 and 4 more of which

shot two. We started the snail as we were driving through the pine woods and shot down but but having us dog lost two. Shot only one snipe all day.

On the drive out I made a very long shot (fully a ty yard) at an Ardea of the which was standing in a pond among meadows near the roadside. I also shot two Col. hendersoni on Days and saw another tern. The most interesting birds seen were five Sandhill Cranes two in one bunch, then in another, which we started while driving across Days. They ran at fully 500 yds. and flew out of sight, carrying their necks stretched out to the full length.

The morning was very beautiful, the sky cloudless, the evergreen foliage of the oaks, myrtles etc. glistening, as if wet, in the sunlight. It was so warm that hummel like birds it should be strange not to hear birds singing but the woods were silent everywhere.

On the drive home just as dark a Bluffornis flew out of some scrub and alighted in the middle of the road just in front of the horses. I saw the white on the tail distinctly and thus made sure that it was a male.

Mr. Cozens shooting wholly on Days bagged 47 snipe to-day. Thus our three guns bagged in all 91 besides the snipe of which Mr. Cozens killed twelve snipers or

... to hunt Quail taking  
...  
brought two, ...  
pointer, ...  
others.

... first bag ...  
and ...  
his disgusted ...  
and ...  
finding ...  
birds

I left ...  
also found four beaver from which I killed nineteen  
and my companion two Quail; I made two doubles  
and missed only three birds. The dogs worked  
me well especially the pointer but scitter was  
staunch or well broken. Four Quail during the day,  
took to trees, one alighting in a tall pine near  
the top the other three in low black jick oaks.  
At the first bird I fired three shots aiming about  
three feet to our side hoping to make him  
fly but in vain for we had to finally bear  
him there. The other three we started by  
throwing up shells and I shot two, missing  
the third.

We saw one White Heron (*Egretta* ...  
high *Hydrotonus p. leucurus* (said to be same as ...  
now) and several large flocks of *Tringa major*

approached the spot where Robin" pointed. A bird  
was and I killed it when a bevy of at least a  
dozen birds flushed. C. killed one and I missed  
into the second barrel. He flushed only one of them  
on a second time C. missing it.

After lunch I started out on foot taking the  
pointer. First hunted some low scrub where I saw  
three Florida jays. Approaching an old field the  
bitch drew and pointed. A moment later she flushed  
the birds thirty yards off. I shot at one only &  
marked it down wounded. The bitch found it  
made a pretty point which she held allowing  
go in and pick up the bird. I could find only  
one of this bevy in the oak scrub where they settled  
but killed this one.

Drove a mile or more through pine woods when the  
bitch struck the scent of a remaining bevy leading them  
some distance and finally pointing staunchly. C.  
killed a brace I only one missing with my second  
barrel.

We then took up the pointer & put down the letter.  
"Pointer" soon found a bevy among palmetto. They were  
highly like scattered birds. C. shot a brace and I  
then missed missing one. My last bird flew about 100  
yds. and dropped dead in oak scrub when we found  
him after some trouble. It is indeed the only one.

In nearly all of the numerous small pine woods  
pounds that we passed over from one to eight or  
ten Greys (Cypripids). We saw only one Heron and  
adult A. carolinensis. Sparrow Hawks were rather  
numerous. Saw several large flocks of Carolina Doves.  
Only one Meadow Lark seen to-day.

1889

Feb. 8

St. Joseph, Florida.

Clear and warm with occasional intervals of cloudiness.

Started at 8 a.m. for Dupo Prairie Mrs. Cory going with us. The drive out was pleasant but uneventful. We passed a *Buteo* *alleni* sitting on a tall stub by the roadside and saw three Florida jays in some oak scrub. We reached the prairie safely but as the wagon struck the railroad track at the last crossing both whiffletrees broke. There was nothing to do but sent the driver back to Osteen with one horse to have the broken parts mended or replaced. This last scene of the day and left us "stranded" meanwhile. Fortunately we were at the beginning of the Sipe ground and by beating the ground closely over the space of twenty or thirty acres we put up about forty Sipe of which I killed eighteen and Cory twelve. I hunted the prairie Welly. She worked beautifully and made a number of straight points but the report of a gun sent her off like a shot. I accordingly attached a long check cord to her collar and being in the other end about my wrist had no further difficulty. We found all my dead birds except one shot rather poorly missing fully eight shots but several of them were very long ones and others wounded the birds slightly.

At noon it was very warm in the sun and Pine Warblers, Bluebirds and Flickers were in full song for an hour or more. Meadows Lark's were also bringing all over the prairie. Out on half mile or more over the open marsh I saw a flock of about twenty gray birds which I took to be Sand hill cranes with an equally large

now white bird which may have been a Whistling Crane leading the van. This flock finally alighted in the marsh.

In a cypress swamp thickly lined with *Sida* a Barred Owl hooted repeatedly in the early afternoon.

We started for home about four o'clock but had gone only a little way when the hunters struck the trail of a remaining covey of Quail. Before they could work it out, however, Anderson, the guide, rode into the midst of the covey flushing it. There were some ten birds only and all pitched into low palmetto scrub after flying about 100 yds. The dogs came to a point together and ~~seven~~ or eight Quail rose in quick succession. C. shot down five without a miss but only three were afterwards found by the dogs. I killed my first, missed my second and killed my third. A little further on I killed two more single birds over Prince's point. Only one of the four started got away.

The drive home was very pleasant the air warm and still and heavy with the smell of the pines. In the knolls there was a strong scent of dead oak leaves reminding me of the north. At sunset a Heron (*A. wardi*) passed us flying just above the trees. After it was nearly dark a Whippoorwill flew from the sandy road rising just in front of the house. In the numerous marshy ponds a few "crackling" Hops were singing. We also heard a bright note at short intervals from one of these pools that I took to be a bell frog.

The hunters ranging about in the scrub palmetto put up a dozen or more Bachman's Finches. The scent of this bird is very strong & our dogs often point there.

... a small nest was seen and found  
... personally. The specimen was found  
... that had scratched his nose, on  
his lip, while his breast was also scratched.  
However he would be only lightly injured  
and we could hunt for it soon and draw  
it easily home.

There are many fine wood birds to be seen in the  
wood near the common woods. The birds  
... were seen singing. The pair  
was *Buteo alleni* and I shot at one from the ground  
missing it badly, but losing it.

In the open pine woods ... the which  
... was *H. edata*. ...  
... to shoot it. I called out that Robin  
had found a berry of Juniper (the second) ...  
... the chance to visit the island.

We were called this afternoon. We hunted  
... with the two Kays. The other ... a variety  
... pointer and better than the ... by ...  
... .

There are a few flowers in the woods. Among  
them the most conspicuous are the knuckleberry, a  
yellow flower with a long stalk (stem) and a  
white star shaped flower which grows in clusters on a  
short stem among broad leaves, both stems and leaves  
pressed flat on the ground.

... and grasses ... were ... in  
the orange grove this evening ...

Mr. Kyan brought in an all ...  
... in length.

Enterprise, Florida

1889

Feb. 11

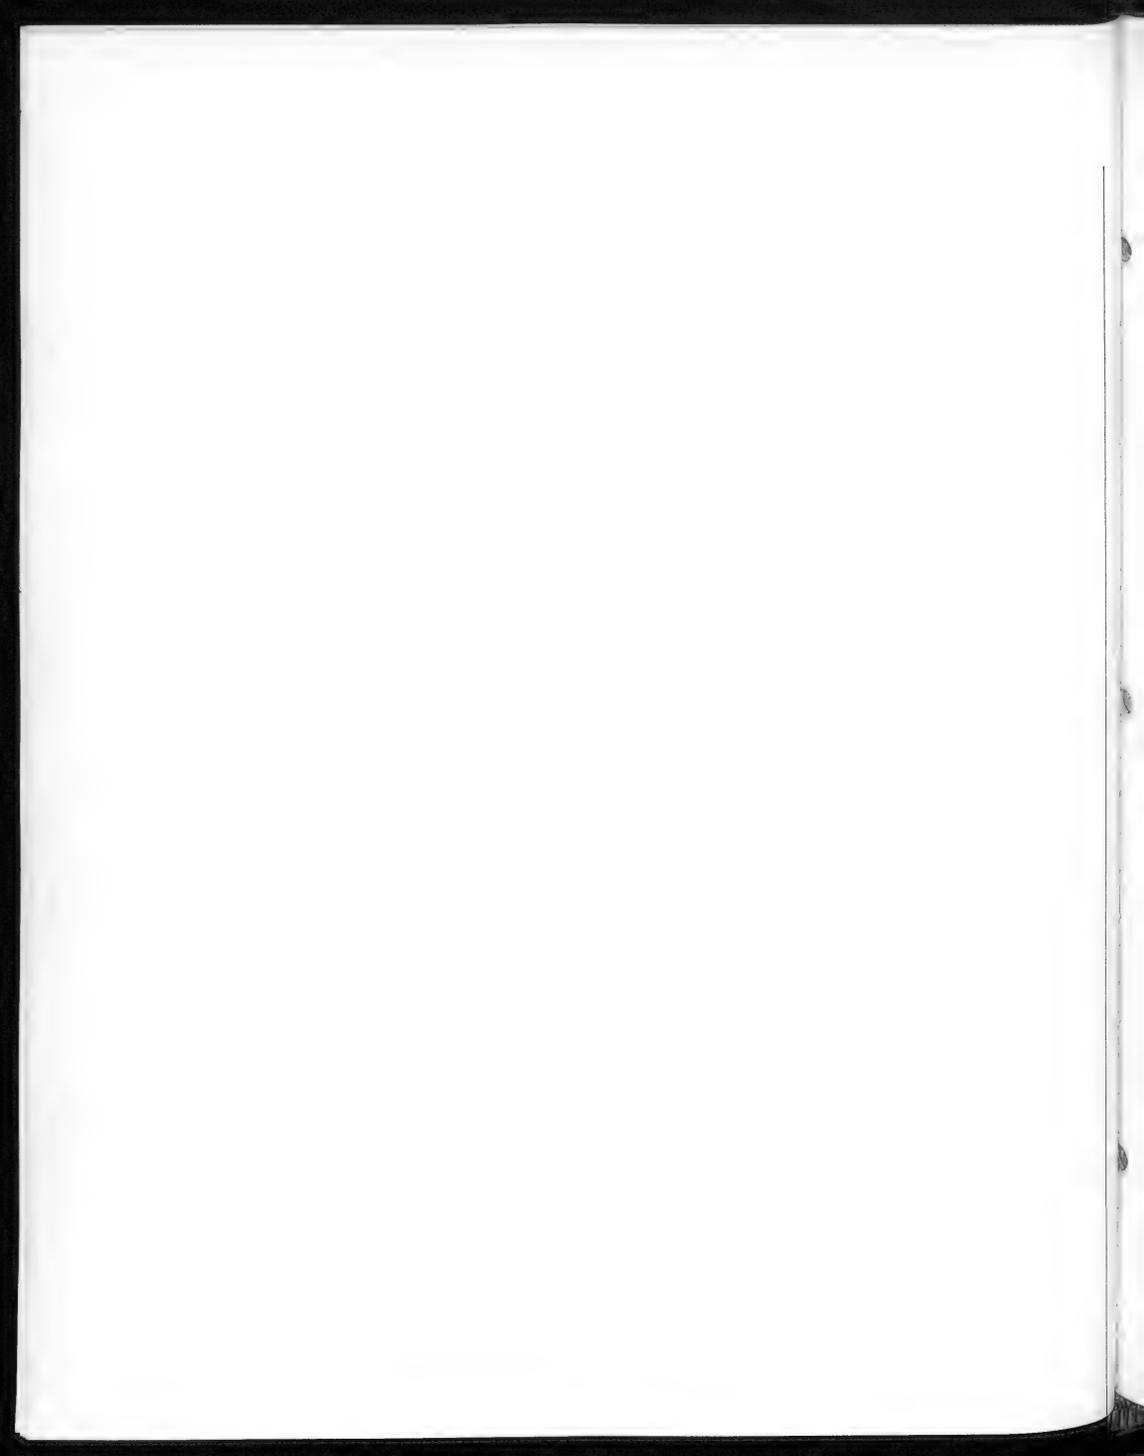

Clear and warm.

Spent the morning about the house taking a walk in the Palmetto hammock. Birds very numerous there, Cardinals, White-throated Sparrows, Ruby-crowned Kinglets, a Blue Gray Gnatcatcher, a Cat Bird, a Brown Thrasher, a Yellow-throated Warbler, nothing bringing except the Gnatcatcher. A large flock of Fish Crow feeding on Palmetto berries. Ground Dove in the very grove.

Hunted Quail in P.M. going out alone on the road to Orange City. "Kelly" found two beys, one by the roadside in pine woods, the other on the edge of a swampy thicket. At the first I fired both barrels at long range bringing feathers from one bird but stopping within. I then got in a single fresh shell just in time to bring down a bayard that ran after the others. These Quail took to dense scrub where "Kelly" put up several, only one of which I shot at and missed (at about 70 yds.

The pointer put up a single bird of the second bey which I shot. She then stood head-on only on the main bey. I made a double as they ran shooting one and turning quite around to catch the other. Some six or eight got off but I found only one which I shot over a steady point in Palmetto scrub.

"Kelly" roaded another bey near the Orange City field but failed to find it. In this field a large flock of Meadow Larks alighted among brown grass at sunset evidently to roost. They came in from a distance in a compact flock like Blackbirds

1889  
Feb. 12

Orange, Florida.

Clear and cool. Wind N.

Spent the entire day hunting Quail going beyond Orange City on the road to Lake Helen. We did not put the dogs out until we had passed Orange City. Since the point in fact, then took her up and put down "Robin" who soon found the Quail in an old field. We each shot one then think escaping.

After this hunted several miles in vain. Then took in "Robin" and put down "Nelly". She struck the track of a running C. which we saw the next moment within a few feet of the wagon. Down we took in the pointer and went back with Robin. I killed right & left as they ran C. missing both barrels. The birds alighted near together and at the next rise I made a second double and then killed a high bird. C. killed one high and we both shot a fifth bird getting all five down within a few seconds. After this I missed four shots in succession at high birds and killed one alone and one with C. We got eleven birds from this covey. The woods were perfectly open with thin grass in which we saw several of the birds before they ran. Robin worked very finely pointing nearly every bird.

After lunch Nelly found two Lewis  
was in an open field, near the road

pine woods. He each killed eight birds here.  
I used one of Co's guns and made wretched  
shooting with it missing fully as many  
birds as I killed. The triggers pulled too hard  
and I regularly undershot my birds. Both  
beams were large ones. They ran more than  
my deer I have hitherto seen here and  
did not lie at all well.

Saw many Hens to-day and great numbers  
of Chipping Sparrows and Grass Finches  
& one Pine Warbler heard singing. Saw  
Geese in a small pond. Shot a fine  
adult Buteo albica on the drive home.  
He was sitting on a stub over a marsh  
and I slipped out of the wagon and  
took up within good shot range.

Gunterprin, Florida.

1889  
Feb. 13

Clear and cool with N. wind.

Spent the day hunting birds starting at 9 a.m. and taking the brace of setters. Put them out first about two miles beyond Orange City. After running a half mile or so "Robin" found a covey of about ten birds in a broom grass field. I made a double as they were C. getting a third bird. They went into the pine woods well together and the black dog quickly found them on the crest of a knoll. One was which C. killed, then four or five at which I shot both barrels killing with my first. C. also killed another. Shortly after this "Robin" found a single bird which I killed over his point.

With the next covey we had bad luck. "Robin" flushed them from broom grass without hunting. He marked five or six down but could find only one which C. killed. After a long search both dogs pointed the remainder of the covey. They ran all around us & flew past our heads. I killed one but C. did not fire at all. Following them C. killed two and I shot at one at long range wounding it badly but losing it.

Later in the afternoon "Robin" found a third covey among tall weeds long a wire fence on the edge of an orange grove. They flew across me as they ran and I killed right & left. C. firing only on the left. The run was about ten minutes.

bevy and the survivors flew less than 100 yds. alighting in the same belt of woods at the end of the fence where the dogs soon found them and C. and I each killed one. A moment later I killed a second, missed one. Three or four flew back to where we first started & then we killed them & then three two of which fell to my choke barrel at my long range one after C. had fired at it. This ended the days sport.

In the drive home I saw a fox squirrel climbing the stem of a tall, slender pine. C. got out and shot at it about half a dozen times before bringing it down. It was much blower and clumsier in its movements than the gray squirrel.

We saw many Pine-wood Flickers to-day and I shot one that the dogs put up in an old field.

Passing through Orange City we saw a flock of eight or ten *Quiscalus glaucus* in an orange grove near a house. This warbler is apparently a rare bird here.

We saw no Florida Jays to-day and for keeps the first time in Porters! The two Pied-billed Grebes were in the same part of the same pond as yesterday.

The country which we hiked over was flat pine land with frequent orange groves and old fields grown up to weeds and brown grass. It had little sand patches except in places about small ponds.

Outspring, Florida.

1889  
Feb. 14

Clear and warm, with almost no wind.

Spent the day about the house-orchard of the morning in the palmetto hammock. Birds were numerous. The crowd of them together in a large mixed flock which included several Towhees, Cardinals and White-throated Sparrows, a Carolina Wren, a House Wren, a Ruby-crowned Kinglet and a White-eyed Vireo. Near by perching at the trunk of a tall palmetto was an adult ♂ Yellow-bellied Woodpecker. Yellow-rumped Warblers were everywhere, among the bushes, catching flies from the tops of the palmettos, in the orange grove and along the street of the town. I saw one greedily eating the pulp of a sweet orange that had burst open in falling. In the chicken yard a fine Florida Grackle was feeding; this species is not common here.

On the lawn in front of the house a number of Boat-tailed Grackles come every morning to feed on bread crumbs which are placed there for them, regularly. They are very tame and interesting.

Besides the Wooding Birds the most familiar and characteristic bird of the orange grove is the fox. A Shrike. There are several always in sight or hearing from the piazza. One of them perches regularly every morning on the roof of a shed and utters his bell-like note incessantly for

a second or two, then, after an interval, repeats them. I am convinced that this is a sort of song as the nesting season is close at hand.

The clean sandy soil under the orange trees attracts numerous Little Doves and a few Ground Doves also. One is seen to feed them many Palm Warblers which were pretty about wagging their tails incessantly. Another bird-wagge the Phoebe is also particularly numerous here. I often see them or four at once pecking along the fence that separates the lawn from the shade.

Early in the morning the males sing freely and in full tones. The Carolina Wren is the only other bird here that is in full song. The Mocking Birds have been absolutely dumb until this morning when I heard one singing short snatches at intervals for an hour or more. The Cardinals sing a little at daybreak.

Blue Jays are common and noisy in the cross beam live oaks throughout the village. Red-winged Black birds also frequent these oaks and sing in small flocks recalling a confused medley like that of our northern *Agelaius* in early spring. These Florida Redwings however have feebler voices and their tones are harsher and more cracked. The Jays imitate the Red-shouldered Hawk very often.

Another singer not mentioned above is *Poliptila caerulea*. I have heard one twice in the orange grove. A *Ceryle* inhabits the grove at all times. I saw him eating the belly of a fallen trout orange tree - 1892

1889

Feb. 15

Clear and hot as July with a light S. wind all day.

To Dago Prairie with C. starting at 8.00 a.m.

Saw nothing of interest on the drive out except a flock of about seven Florida Grackles. Shot one but it proved worthless having lost half the tail.

Reaching the prairie began beating for Snipe but found very few. I killed nearly all I started - ~~started~~ in number in ~~starting~~ shots. "Nelly" found several of them & made some staunch points. I made one double shot on Snipe & one on Barks. Near the middle of the prairie Nelly flushed a King Rail from a bed of reeds. It flew only a ~~small~~ distance but we could not start it again. In the pines there was a *Hylocichla*. Meadow Barks was singing all over the prairie. Flushed one *Hebrew's Sparrow*.

Reversing the railroad we next tried some new ground for Snipe. "Nelly" found ten or twelve of which I shot five. I missed six or eight fairly good shots however. Coy killed ten Snipe in all. He shot badly at first but killed all his last birds.

In a wet meadow among short grass "Nelly" pointed a second King Rail which C. shot. She also flushed a *Cistothorus stellaris*.

For some time we drove as before us eight fine White Egrets. At length they settled in a circular meadow bounded by snow-berry cypresses. As we approached we discovered a large patch of snowy white near them which C. at once presumed to be a flock of White Herons. The Herons were the

alarm faster birds started, each appearing like  
a Black Duck, the air seemed filled with  
white birds. There were fully forty birds about  
one third of them young (immature) birds. They  
came out past us within perhaps 70 yds.  
then turned & came back high overhead.  
He fired six or eight shots at them & I  
dropped an adult in too ragged plumage  
to be worth skinning.

The dogs trailed some hawks across this  
prairie but failed to find any.

On the way back to Ostend "Belly" found  
& pointed a small covey of Quail by the  
roadside. I shot one as they ran and  
following them across the railroad into some  
low scrub killed four more. C. sat in  
the wagon reading, meanwhile.

After passing Ostend we flushed two coveys  
of Quail. Of the first I killed one; of the  
second I got a C. one. I also killed two  
fine Florida Grackles.

The drive home was very pleasant, the  
air cool and refreshing after the sun had  
set. We reached the hotel about dark.

Leesville, Florida.

1889

Feb. 16

Cloudy most of the day with occasional intervals of sunshine. Dead calm in R.L. Bay warm all day.

Spent the day on the water starting at 9 A.M. and getting back at dusk. My boatman was Oliver Newton a fine negro of fine physique & remarkably intelligent. We skirted the east shore of S. Moore, thence into Co. Belted, thence across Holden Prairie to Thornhill Prairie. On the way saw very few birds save in one place five Louisiana Herons and a Bittern. I killed the latter sitting and missed one of the Herons with the other barrel. I also shot a small alligator one of seven or eight swimming on a raft of floating lily roots. We saw several ugly looking but doubtless harmless water snakes asleep on bushes several feet above the water. I killed a single *S. f.* at the place where I landed to get the Bittern.

Reaching Thornhill I tried in vain to get a shot at two Louisiana Herons which kept alighting on some low live oaks. Under these oaks we lunched sitting in the boat. It was a beautiful spot and there were many birds about us, a Mockingbird, a pair of Blue Jays, several Red wings, two *Sphyrapicus varius* & a *Ceryle*, a *Colaptes*, a Red shouldered Hawk & a Towhee or two. Back among the trees a White eyed bird was singing. A snowy white Heron occasionally flapped his way slowly across the prairie & an adult ♂ *Podiceps*

scalded past. The air was still and pretty. From  
the reedy tangles along the river the cries of Coots  
and Florida Gallinules were heard almost incessantly.

After lunch I landed on ~~the~~ the deep ground  
starting for birds and killing all of them <sup>making</sup>  
my traps to day in my traps. Also shot two  
Meadow Larks and a Florida Crow, the latter  
biting on the top of a small pine. Started a  
Short billed Marsh Wren several Titlarks & Sav. Sparrow.

Returning to the boat we pushed off & had  
just cleared the oaks when I saw a snake  
swimming well out in the river. It proved to be  
a diamond banded snake about two feet long with  
only one rattle and a "button".

On the way back followed the river to the  
bath. It is bordered by beds of floating vegetation  
chiefly lily leaves and a large Polygonum with dense  
and very tall reeds behind. These beds were alive  
with Florida Gallinules which as we approached  
scuttled, swam or flew back into the reeds. They  
often walked on the lily leaves or stood erect on  
them. Swimming they looked very like Coots. There  
must have been thousands of them. Coots were  
also very numerous, scattered about in every direction  
single or in little clusters. I shot two Gallinules  
& two Coots. Also shot a Boat Tail Grackle  
flew past the boat. The outcry of the Coots & I  
was nearly incessant. Saw about sixty Duck, at  
least fifty in one flock. Near the mouth of the  
river about forty Herons rose at once, mostly *A. ciruela*  
with a few *A. ludoviciana*. Red wing Blackbirds swimming  
in the reeds & very many Merganser Yellow. Herons also  
very numerous. Boat-tailed Grackles everywhere along  
the river, nearly all of them ♂♂. A single ♀

Titusville to Banana River, Florida

1889

Feb. 18

Clear and hot; the 82° at noon. Wind S.W.; strong all day.

Left Titusville by the noon train reaching Titusville about 3 P.M. Typical Florida town of the most common type. Fish Crows & Boat-tails swarming about the vacant lots and along the edge of the river. Many Yellow-rump Warblers & one Titlark on a long wharf.

We had chartered the schooner "Manatee" for a week's trip and getting our baggage aboard we sail for Banana Creek. The distance across Indian River is about seven miles diagonally. The water for the entire way was thickly sprinkled with Coots (*Fulica*) with every now & then a great bed of Scaups (*Fulix affinis*). The latter regularly took wing before we were within

100 yds. but the Coots were tame. The majority flew at about 100 yds. paddling frantically with their feet for many yards, after stopping against the crest of a wave after flying many rods & giving up the attempt. A few Coots did not attempt to fly at all but dove as nimbly as Grebes staying under water a long time. One came up within 10 ft. of the side of the vessel. The water in many places was 8 ft deep & free from aquatic vegetation. The Captain said the Coots feed by diving.

We reached the mouth of Banana Creek just before sunset. Here I saw my first mangroves.

The wind had now sunk to a gentle breeze deliciously soft & warm. In the mangroves several Kingbirds were singing; in the marshes many Maryland Yellow-Throats. In the distance I could hear Boat-tails uttering their rasping chick, chick, chee-chee-chee. Several Kingfishers were flying about chasing one another. In every direction

ultimately looking for a bird of prey to  
kill.

It was the most interesting feature of the scene was  
the extraordinary number of birds. The water (at  
least half a mile across) of Panama Creek as far as  
the eye could reach and in the air a continuous  
stream of birds toward the land, and finally, and  
towards the river, as our vessel moved on the  
water birds rose with a noise resembling a waterfall  
or a heavy shower falling on a still pond. In every  
direction the air was filled with thousands upon thousands  
of birds as thick as swarming bees. This continued until  
dark although we saw the greatest number near the  
mouth of the creek. Probably two-thirds were Coots (*Fulica*)  
the remaining one-third Lesser Scaups with a sprinkling  
of other Ducks which we could not certainly identify,  
at the fewest we saw not less than three million birds  
in an hour & going only two or three miles.

At twilight fell several Night Herons flapped past  
us quacking hoarsely; a big Owl sailed across the open  
water; several pairs of Gallinules squatted on the marshes.  
Innumerable flocks of several species, all new to me except  
the crackling Ayas, began a medley of sound that  
lasted all night. Every few hundred yards we  
disturbed great beds of Coots, invisible in the darkness,  
but making the sound of rushing water so loudly that  
it could be distinctly heard in the cabin of the vessel.

We reached our anchorage about 10 P. M. The moon  
had now risen and added its charm to the perfect  
Southern night.

Manana River Florida.

1889

Feb. 19

Cloudy & cool. Wind N. E. blowing a gale all day. Heavy rain in afternoon.

Went off at 10 o'clock. Found, after the failure of the relief station, Leachman's boat, came on board and offered to take us to a cove where there were, and had looking this first effort was to run the "Maudie" hard and fast aground in attempting to cross a sand bar. Several hours were spent in attempting to warp her off. Failing in this we left her and started off in the small boat. The wind was blowing a gale and we drove down before it into a cove at the mouth of which I left C. to look over the traps while I went on with Leachman to visit some ponds. We saw a great many Duck, chiefly Geese & they were on the way down and some large flocks rose from the cove while Coots (*Fulica*) were lying in beds of grass vegetation. But the trip to the pond proved a failure for there were no birds in them. Five Florida Duck, *Querquedula*, however, scolded down past us and alighted on a flooded meadow. I tried to stalk them but in vain. They rose precisely like our Black Duck and the flight was the same but their coloring looked as light as that of ♀ Mallards.

I saw on this tramp one fine *Ardea egretta*, several *A. ludoviciana* numerous *Actitis phoeniceus*, a few Meadow Larks and some Savannah Sparrows. I also stalked down <sup>I shot three of them with a shot gun.</sup> on eight Snipe & fully made two fine points on them. On the way back to the boat saw a Duck Hawk scolding over the meadows. During the entire time I saw nothing in ponds with the wind blowing in such a way that it was hard to see,

Returning to the stand found that C. had had only three long shots, all misses. I joined him and presently a King neck Duck sailed in over the large spring drain a pair that which he missed with both barrels. Soon after another came & I killed it. A few minutes later another which C. killed. After this several long shots by both at birds hurrying past down wind; all misses. Then a pair of King necks alighted & C. killed them both. He afterwards got another single bird and bagged one of a pair of Florida Black Ducks which alighted in a cove just above the stand.

After this we passed our two hours without getting a single good shot at Ducks but C. killed one from a bunch of four Stilt sandpipers and also shot at and badly wounded a Duck Hawk which, however, escaped.

Royal terns were flying about all day and I saw several King-billed Gulls and a few Storm-petrels. Two or three Ardea wardi also passed the stand one fine one coming nearly within range.

Early in the afternoon we returned to the vessel.

The country over which I walked to-day is peculiar & very unlike that about Antiprism. The island is everywhere intersected with creeks and has innumerable small, shallow ponds surrounded by tall sedge with occasional patches of Cat-tails. Along the creeks mangroves form a well-nigh impenetrable belt. I saw many shrubs that were new to me & that I could not name, one of them in bloom the flowers scattering and pale lilac in color.

The Duck Hawk that C. shot at was started by one man Anderson. It was eating a Duck on the shore.

Banana River, Florida.

1889

Feb. 20

Cloudy with high N.E. wind all day. Occasional heavy showers.

We started from the vessel about 8 A.M. taking different directions C. going with the Captain in one boat to hunt some distant creeks, F. taking Anderson with the other boat and building a stand on a point near where we shot yesterday.

The wind was blowing on shore and ducks were flying thickly. For a little while I had lively shooting then it slackened and ducks flew at wide intervals only. I kept Anderson out with the boat stirring them up and in this way got many shots. I stayed in the stand all day leaving it about 5 P.M. During this time I fired about fifty shots knocking down about twenty five birds of which I lost a number of wing-broken ones, getting only eighteen in all. Of these one was a King-neck, the others scraps of both species, *T. marila* predominating. I also bagged a Killdeer.

Many of my shots were long ones but in spite of this I missed a great many fair chances. The trigger guard cut my finger badly yesterday and it was so tender this morning that I flinched at nearly every shot. Most of the birds that came in to the decoys were singles but I had several chances at doubles and made one right & left successfully.

There were very many birds flying. I saw besides thousands of scraps & coots about twenty *Acas fulvicauda*, two *Spatula clypeata* (I wounded one of them a fair & badly),

Suitcase, an old ♂ with long tail, one large male &  
a few Whistlers

There were many Waders flying to-day a few  
alighting on a mud bank opposite my stand  
I saw full 100 Willets, about a dozen Greater Yellowlegs,  
a flock of about 10 Stilt Sandpipers, several flocks  
of *Actitis bernicupalmata*, an Oyster Catcher, a  
Marbled(?) Godwit, and a few flocks of Peeps (Species  
not ascertained).

Royal Terns were numerous and I might  
have shot a dozen from my stand. Two  
Forster's Terns came and fished near me  
giving me a good view at basin.

Bate in the afternoon two *Ardea herodias*  
came and fished in the shallows below  
my stand. I shot at them at very long  
range (nearly 100 yds.) but got neither.

In the grass near the stand I flushed  
a Carolina Rail which looked like an adult  
in full breeding plumage.

The day was so rough & stormy that I  
heard no small birds except a Carolina Wren  
just at evening.

Several great beds of Crows lay in the bay  
opposite my stand all day. When started  
by the boat they would rise lightly & easily  
against the strong wind. Some of them  
getting as high as 50 ft. in going 100 yds.

They had a curious hovering flight reminding  
me of Pigeons about to alight. Although  
there were many thousands I heard them  
only a few times. Their noise was like the cry of the murrelet.

Banana River, Florida.

1889  
Feb. 21

A. M. clearing with frequent showers. P. M. clear & hot.  
Starting at 9 A. M. C. & I both took stands on the point where I shot yesterday. I going to-day about 300 yds. to the eastward. Here I remained all day. I saw more Ducks than on any day thus far but they would not decoy well and most of them flew high or well out. I had perhaps twenty possible shots and bagged under birds, eight of them Ducks (chiefly the Greater!) two Shovellers, one Hooded Merganser and one fine adult ♂ Gadwall, the latter is the first that I have ever killed. It was a high bird and came over me rather high. The Hooded Merganser swam in with some Coots & I shot it on the water.

Just before shooting the Gadwall I killed another bird new to me viz. a fine adult ♂ Brown Pelican. It came flying past my stand low down holding its bills pointing down like a Woodcock. It flew about 200 yds. and dropped dead sending the spray several feet high when it struck.

While skinning this Pelican in the boat I had a good shot at another but my gun was out of reach. By the time I got it the bird was beyond range as were also a pair of Shovellers which had been sitting among the decoys and which rose during the confusion.

Later in the afternoon an extraordinary flight of Ducks began and lasted a long

it was light enough to see. In flocks of varying numbers up to several hundreds each they hurried past in an almost uninterrupted stream. There were many flocks of Midgeon, Scaup & Pintail among them but fully ninety per cent were Scaups. I think I saw not less than one hundred thousand in all. The Midgeon flew high and I heard their musical whistle perfectly. I saw a single adult ♂ duck that was either a Canvas back or Red-head probably the latter.

Dosers of Tern, Yellowlegs and a few Marbled Godwits flew past my stand to-day. In the evening twilight a large flock of Black Skimmers passed within twenty yards. I shot two Nallet from a large flock and also killed a single Lesser Yellow Leg.

After the sun came out small birds began to sing. I heard White-eyed Vireos, Maryland Yellow throats, a White-eyed Vireo etc.

Coy spent the day on a bay a mile or more beyond me. He saw thousands of birds and shot away all his shells some eighty odd shooting down about fifty five Ducks of which owing to the presence of his dog and the tall grass he bagged only thirty-four. Towards evening flocks of various species passed past his stand in a steady stream. He killed many Gadwall & Midgeon & one Florida Black Duck. He also brought in a very fine Ardea egretta which was shot by Quartermain.

1889

Suwannee River, Florida.

Cloudy and cold with frequent showers wind N.W. blowing a gale all day.

We got off at about 8.30 a.m. and rowed directly to the place where Coy shot yesterday. On the way we saw thousands of Coots. In one place the creek was solid full of them for hundreds of yards. Probably there were at least ten thousand in the flock. We also saw many Shovel-bills. In a narrow part of the channel Yellowlegs, Y. flavipes, and killed were feeding along the margin of the water. Among them were about fifteen Stilt Sandpipers. These rose all together and passed me in a compact flock. I shot into them and killed three. A little further on about four, Himantopus, A. curvicauda & A. ludoviciana, rose and with them thirty or more Blue-winged Teal.

Reaching the end of a bay I chose a stand on an island which I put out my decoys off the end of point at the mouth of a creek. The first bird that came in was an adult ♂ Blue-wing Teal which, at the report of my gun, doubled up apparently dead. The next minute a ♀ Pintail swung by at long range and I brought her down with a broken wing. "Nelly" swam out and after some trouble caught her under water. She then went for the Teal which had decoyed a long way out into the bay & was about to seize it when it rose and flew out of sight in the distance.

I spent the day in this stand & bagged besides the birds just named another Pintail, two ♂ Shovel-bills, one pair of Blue-winged Teal, a Greater Scaup (♀) and a ♀ Ring-neck Duck.

used only one fair shot & killed but failed to kill several long ones. The pair of teal alighted among the decoys and I killed them both. I am shot, sitting.

Also shot an adult *Ardea coccyzus* in immature plumage and a fairly good *A. ludovicianus*. Many others of both species passed me within close range but most of them scalded off before the strong wind when I ran to shoot & so quick, that they would get out of range before I could pull the trigger.

A fine adult ♂ Least Hawk came towards me and by squeaking a little I called him in to within twenty yards but I fired both barrels at him in vain although he finally dropped dead in the scrub several hundred yards away.

We left the stands about 4 o'clock when it was evident that the enormous flight of Ducks which passed over them yesterday was not to be repeated. In fact we saw very few Ducks to-day. As I was leaving the stand a Florida Black Duck came nearly within range, quacking loudly.

All day long an immense flock of Red-winged Blackbirds haunted the vicinity of every place of concealment feeding along the piles of cut grass that lined the shore. Swamp Sparrows were numerous in the bushes, I heard the unmistakable note of a Water Thrush along the creek. Saw several Carolina & one Virginia Rail, Royal Terns in sight all day. On the way home a flock of fifteen White Pelicans (the first I ever saw) passed us. They flew in a V like Geese, all flapping their wings together, thus making a white streak against the dark water.

1889  
Feb. 23

Clear and cool. Wind blowing a gale all day from the N.

Started at about 8 a.m. taking the Captain and Underwood in the big boat. Cory did not go out at all.

I went directly to the place where we shot yesterday. Just after leaving the vessel I killed a Lesser Scaup which came past me down wind going like a bullet.

Did not fire again until reaching my stand. He saw thousands of Coots and a fair number of Scaups on the way. At the island about 300 Pintails were feeding some forty yards off shore. They presented a fine appearance as there were many old ducks among them. They kept up a low conversational chattering and quacking. I tried to stalk them but failed and they all went off down the bay.

Putting out the decoys I made a stand and lay in it for about two hours. The first bird that came was a fine old ♂ Pintail which sailed past the decoys about 50 yds. out and dropped to my second barrel. A few other Ducks passed out of range but as there was evidently no prospect of good shooting I called the men to take up the decoys and rowed back to the gut.

Here we made another stand. Several Scaups came in to the decoys as soon as we put them out and I killed one. After getting fairly settled, however, I spent the entire afternoon without getting a single fair shot at a Duck. Many Scaups flew past out of range & an occasional bunch of Pintails whirled overhead high in air. Once when I had left the stand for a moment a pair of Florida Black Duck came

directly over the decoys low down. Their yellow bills  
gleamed in the sunlight as if gilded.

My only shooting in this stand was at Hons  
of which I killed three, two adult *A. caerulea* & one  
*A. egretta*. The latter I dropped at windy two paces.  
It fell among thick bushes when I came upon  
it suddenly & found it sitting on a stick with  
its wings neatly folded & showing only a single  
blood spot on the back of the head. I struck  
at its neck with the gun barrel but not hard  
enough for it immediately rose and I had to  
shoot at it again injuring it severely as a specimen.

I also dropped a Marsh Hawk in the same  
bushes but failed to find it. I called it up to  
within six yards of me by speaking. When I  
began to speak it was fully 200 yds. away.

Four large flocks of Hons passed me fully 100  
birds in each, mostly *A. caerulea* with a sprinkling  
of *A. ludoviciana*. They fly very like Crows sailing &  
circling a good deal. Near my first stand a great  
flock of White Ibis's passed flapping and boaring  
in circles; as they passed against a black cloud  
the effect was superb.

I saw two Water Thrushes distinctly to day. The  
Yellow legs were gone (I saw only two) but several  
great flocks of Peeps passed. The north wind had  
driven nearly all the water out of the Bay;  
the flats were exposed for miles probably scattering the  
wadus.

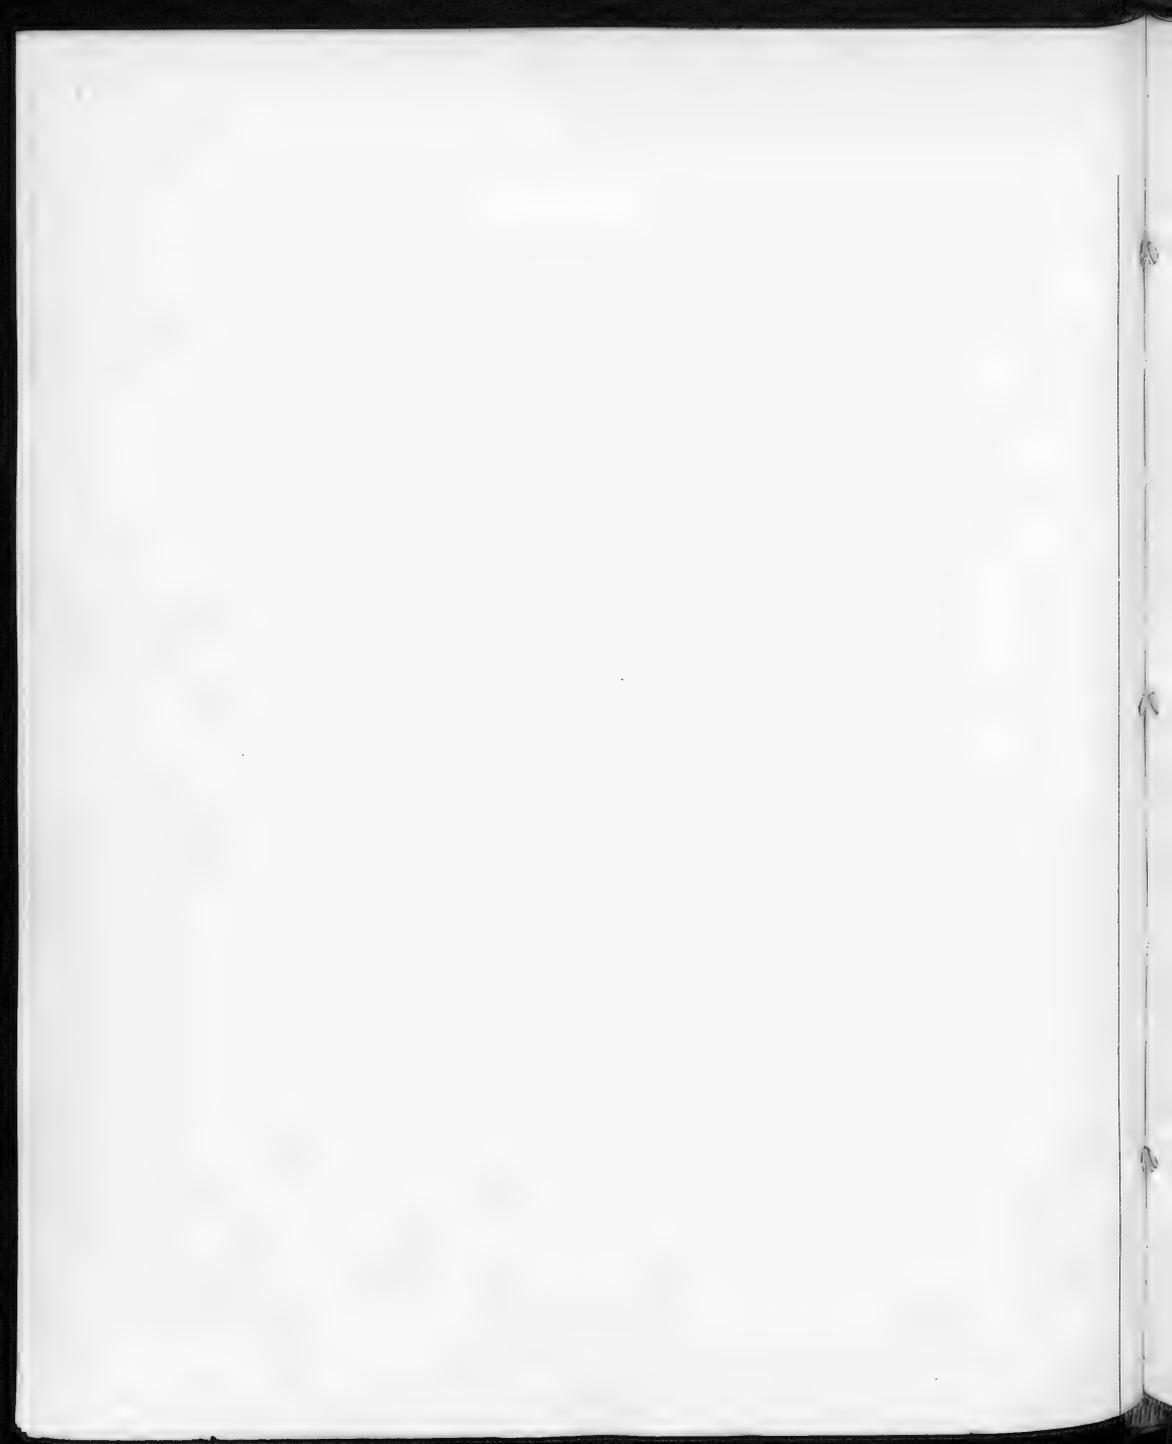

As we were about to start for the vessel a heavy flight  
of Jaegers began passing through the gut. I killed the first  
three, all long shots then fired 25 shells in about ten  
minutes bringing down only three more all of which were shot. 24  
minutes more in dark I could not see the gun barrels.

187  
1882

Clear with strong cool N. to N.E. wind.

Early this morning we engaged Henry to take us to Titusville in his flat bottomed, square ended boat a sloop rigged vessel of fair size but only 10 inches draught. While waiting for breakfast C. shot an alligator from the deck of the Manatee. It rose at intervals of about two minutes, first showing the eye & nose only, then slowly raising the entire head above the surface, finally striking beneath the water. It measured exactly 5 ft. 11 in.

Beat much of the way through the creek against a strong wind. Coots in beds & nests at frequent intervals. We computed the Cargent bed at fully 100,000 birds. "Wood" Ducks (chiefly Midgum & Pintails with a few others) & Gadwall also very numerous rising in clouds at times. Ring-necked Pheasant, Yellow-legs, Killdeer, Killdeer etc. along the shores. At the mouth of the creek the water was black with Coots & Ducks, as far as the eye could reach. Just outside the creek saw a pair Duck Hawk looking about.

Ocala, Florida.

Feb. 27

Early morning cloudy. Rest of day clear with cold N. E. wind.

Started up the bank at 9 a.m. with Oliver Newton as boatman my intention being to spend the day collecting water birds etc. Reaching the inlet we began to paddle, or rather row slowly, through the extensive beds of cane and bounts that border the river on both sides. My first shot was into a flock of Red winged Blackbirds, all ♀♀, of which I killed six. Shortly after this I killed a large water moccasin measuring about five feet. We took it at first for an alligator as it lay on a bed of "trash" its head raised nearly two feet above the surface. Oliver came near running the boat on it & thinks it would have struck him over the gunnel.

Florida Gallinules were numerous and I shot three. I also killed one *Ardea ludoviciana* in various immature plumage. It was standing erect & still on some bounts about 60 yds. off as we rounded a bed of cane.

We landed at an orange grove on the east bank. As we ran the boat in I shot a fine adult *A. carolinensis* that was stalking along the shore. Skinned my birds under an orange tree in which an adult ♂ *Geothlypis trichas* was seen feeding about the opening flowers. Also saw a *Parula* & heard a *Kinglet* *Halcyon* singing. Lutescent & Hermit Thrushes calling in the scrub. Coats just outside the fringe of brush making a noise as if persons conversing in low tones. The

...the water. As there  
... I am inclined  
to think them the authors not the Coots as I  
thought on the 16<sup>th</sup>. The cry is precisely like that  
made by these Grebes on Crooked Is., Mich., last  
May. Am very sure I disentangled the notes  
of the Hb. Gullinots to day. They utter a who-who  
who-who in a tremulous tone. It closely  
resembles the Spring call of *Rallus virginianus*.

Spent the P.M. feeding the Bonnets etc. back  
towards the lake. Saw many pairs, two of them  
with a *U. carolinensis* (ad. & imm.) and a ♀ *U. carolinensis*  
had in the bag. One had was one of a pair  
that was seen the Bonnets ahead of the birds.  
Saw eight or ten others in pairs & threes, the  
males in full plumage.

Near the mouth of the river found forty or  
fifty small Herons mostly adult *A. carolinensis* with  
a sprinkling of white birds, probably the young,  
and a good many *A. ludoviciana*. Saw a  
pair for them at an alleged "nest" in some willows  
but did not get a shot.

Saw nearly 100 ducks about 50 in one flock.  
They looked like scaups. Saw others that  
I believe to be Hooded Mergansers.

... the  
beds of course. saw one *H. carolinensis* (10.00/10.00)  
thing on a stake. Several Marsh Hawks feeding  
... two or three Killdeers flushed from the  
same. a few White Collared Swallows. ...  
... and ...  
... to the hotel ...

Enterprise, Florida

1889

March 1

Cloudy and cool. Heavy showers in early morning.

Started at 8 A.M. with Coy intending to hunt the country between Orange City and Lake Helen. We got out, as far as the railroad station, however, when the rain drove us back. We made a second start at about ten and stayed out the remainder of the day. We did not go far but drove at random through the woods beyond the de Bary place and about the junction. In all we found six birds & I will have a few more found by a pointer called "Grove" a tall currier hunter we had taken out on trial. He pointed the first Cooey and two high birds plainly, but after this ran in on two birds after making a short point.

I killed five birds, C. bagging four. One Cooey acted very badly running a long distance before the dogs & rising out of range. He followed them up sharply, but they rose a second time at fully 200 yds. distance. Mr. Crossens tells me they act in this way frequently after March 1<sup>st</sup>.

We saw only few small birds to day & nothing of interest except a Red Tailed Hawk which came very near us. It was an adult but it looked no larger than a B. lineatus.

Enterprise, Florida.

March 2

Cloudy in morning & late afternoon. Middle of day clear and rather warm. Strong S.W. wind all day. Started out 8.30 by boat for the Wekiva river. The water was perfectly calm at first. We saw a large alligator basking on the surface near the de Bary landing and disturbed several large gar fish which plunged away from the bow or one with mighty & most startling splashes. Oliver says they fall asleep lying near the surface turning themselves.

Just below the outlet of a landing where many shad nets were drying we saw about a dozen Buzzards feeding on open fish. There were also four Herons, three Louisiana & one Little Blue. I shot two of the former but one escaped into a cypress swamp & was lost.

My next shot was at a large otter which we saw swimming in mid stream a little below Fort Florida. He looked like an American mink but swam much faster & showed a flatter head. He dove twice going perhaps twenty yds. under water each time. I shot at about 30 yds. & apparently, wounded him fairly but he did not reappear.

Near this same place I shot my first Anhinga, a fine ♀. It was sitting on a slab on the river & allowed us to drift within 30 yds. During the day we saw about eight of these birds several of them beautiful.

Nearing the mouth of the Wekiva I heard a Coueus a. floridanus calling in the belt of palmettos

me. I shot a pair in 1876. There was also  
in the Udea near a Centurus in the  
palmets both of which birds I remember  
them in 1876. The Hekia also seemed to have  
changed not at all since my last visit.  
He went up about a mile to day & in  
his list saw in Udea cañon; two  
squirrels, and a ♀ Wood Duck. The most  
greens, ash trees (A. americanus?) maples (A. rubra) and  
cornels were in nearly full leaf & the cypresses  
fast coming in foliage. The willows (S. virginiana) were  
covered with small leaves & were in full bloom  
& alive with bees. The river was very to be seen  
and its setting intensely green wherever the eyes  
rested. Cardinals and Grackles (D. aglaia) were  
seen as usual in the former in song. In  
the Cypress swamp a Pileated Woodpecker was  
calling & several B. l. alleni screaming incessantly,  
as they soared against the sky. He met a  
native who had come down eight miles. He saw  
many Herons & about twelve Couleaus on the way.  
Has not seen a Parakeet for two years nor a Ivory  
Billed Woodpecker within a year. Said He had still  
visit the Hekia prairie. He saw one Udea last Dec.  
Couleaus are not decreasing much; they are little molested.

On the way back to Lake Umbagog I shot a  
Witten which we saw alight & afterwards flushed.  
It proved a ♀. Also shot four Red-wings, 4 Sand  
trout hooting in a hammock. The Cuckoo-like call  
was heard of all over the flooded meadows. Found  
Coots wherever we heard it, but also saw one or two  
Grebes. Saw only four Ducks & perhaps, besides Coots  
during the day. D. dominica, & Parula in full song. Found  
an Agelaius and bird screaming about

Enterprise to Palatka, Fla., via St. John River.

1889

March 11

Clear and cool with strong N. wind.

Left Enterprise at 9 A.M. on the small side-wheel steamer "H. B. Plant" and reached Palatka a little after dark. Spent most of the day on deck. The river was very beautiful for the forests on shore in almost full leaf. The cypresses, however, are only beginning to unfold their foliage. The "bonnets" were very luxuriant and the vivid green of some of the cypress beds was almost dazzling to the eye.

During the entire day I saw only one alligator, a small one basking on a log. Of birds I saw seven or eight Anhingas, nearly as many Great Blue (Ward's) Herons, about fifteen single adult *Ardea cæcurea* and a flock of perhaps twenty mixed Blue and White birds, probably of the same species. We also passed a few single White birds some of which may have been *Ardea herodias*. Most of these single birds were very tame several allowing the steamer to pass within 30 yds. without flying or even showing much alarm. No egg-eaters (*Colaptes*) were seen during the day, and, to my great surprise, only two crows. The *Ardea herodias* were seen in the most abundant numbers.

Other birds seen were a White Heron, the Great Blue Heron, and three Crows which I took to be *Circus cyaneus*, all within a few minutes. They were all flying, evidently shutting their breeding grounds as such birds will at this time of the day. The Great Blue Heron came down from the woods from the swamp

Tallahassee, Florida.

1889  
March 14

Clear and cool with strong N.W. wind.  
Reached here on the afternoon of March 12<sup>th</sup> having  
in the interim between March 7<sup>th</sup> my last journal  
record visited Charleston and St. Augustine.

Started at 7.10 this morning on a day's  
shooting trip for Quail and Snipe taking with  
me a borrowed dog a coarse bred liver & white  
pointer, "Bingo" by name. I also took a small  
negro to drive, a boy not over eight years of age  
but very efficient both as a driver and shooter.  
We started in a N.E. direction and drove six  
or seven miles before we reached an unwooded  
country. The road led through a farming region  
which closely resembles Virginia between Chesapeake  
& Richmond very hilly and broken with deep  
valleys and water courses down which flow clear  
swift brooks. The soil is red clay and the  
roads very hard and smooth except for the channels  
worn in them by the water. We passed many  
large pear and apple orchards the trees tall  
and slender resembling Lombardy poplars. The  
pear trees and wild plums were in full blossom.  
Along the roadside were many wild flowers &  
the thickets <sup>are</sup> over-run by yellow jessamine.  
A small tree <sup>(Pinus angustifolia)</sup> with foliage resembling a live  
oak was covered with pink blossoms very  
like apple blossoms. From the hill tops the  
eye looked for miles over deep valleys mostly  
in cotton & corn fields with scattered trees and  
dark belts of pines, the latter mostly *P. taeda*  
I think. Live oaks being quite abundant.

Some were red winged blackbirds & Kingbirds.

Working a small pond my driver assured me I would find Snipe about its edges—a most unlikely, looking place. However I tried it and started about a dozen Capping Snipe. There was also a Titmouse and three Carolina Grubs one of which I shot (which proved an a duff of laying). The Grubs uttered the Cuckoo notes, also the kind like cry I ascribed to *Tullinula gabala* when at Estuacion. There were also Killdeer & Florida Grackles at this pond.

We spent several hours after this hunting for Quail driving ribs across interminable cotton fields & patches of broom sedge the dog starting nothing but hundreds of Grass Quills, an occasional *Passerina* and several Rabbits the latter of which he caught small. Carolina Doves numerous. A few Sparrow Hawks & an occasional Marsh Hawk. Many Savanna & a few Yellow winged Sparrows.

Finally we reached another small pond in which was a ♀ Ring neck Duck and a Coot feeding near some tame Muscovy Ducks. I shot the Ring neck and then six Snipe one more escaping.

Next to a third pond where we bunched. Eight Ring-neck Ducks. Very they keeping nearly the middle, a Carolina Grub, and some Coots in this pond.

Spent the afternoon hunting Quail. "Brigo" found four berries pointing them all handsomely. Two had 5 birds each, one 6, the last about 18. I killed 11 in 13 shots making four straight doubles. When I found the last berry I had only three shells left.

All four berries were in plain bushes in plantations. Drove back to town before sunset. The air sweet with the fragrance of the pines.

Jacksonville, Florida.

1889  
March 16

Clear, still, and hot. Ther. about 80° at noon

Starting at 8.30 A.M. with C. I drove out along the road taken on the 14<sup>th</sup>. At the first pond on the right just beyond the pond heard some Grebes calling and leaving C. in the backboard I went in pursuit of them. There proved to be three ponds separated by narrow strips of land the first two connected by a ~~slight~~, the third without either inlet or outlet. In the first and third ponds there were a single pair of Grebes (*C. podiceps*) each, in the middle pond a single Grebe and a pair of *Fulix collaris*. I spent two or three hours in going from one pond to another trying every device I could think of to get shots at these birds. The Ducks I stalked shooting the ♂ on the water at long range. One of the Grebes I also stalked successfully. Another I killed by concealing myself near its favorite feeding ground and waiting (perhaps twenty minutes) until it got over its alarm and swam back. The two Grebes were ♂ & ♀ but they were dead in different ponds and were not a pair.

In tramping about these ponds I started fully a dozen snipe but did not try to shoot any of them. They were shy as a rule for three was absolutely no cover where they were feeding, usually under live oaks where the ground was smooth and much covered with dead leaves. There were also several Killdeer about these ponds.

Small birds were numerous and several species as Cardinals, Yellow-throated and Pine Siskins,

full song. In the cat tails about the ponds I heard & saw Swamp Sparrows and Maryland Yellow throats. Flitting from place to place along the water edge and alighting on the dead cotton stalks were numerous Golden & Yellow rumped Rabblers. Among some young loblolly pines a pair of Centurus carolinus were flitting about hammering at the tree trunks and calling <sup>over 3-300</sup> like Flickers. There were many Sparrows in the cotton fields chiefly Grass Finches with a few Yellow-wings and one Bachman's Finch (typical) which I shot. Meadows Larks in flocks and silent rose every now & then from the brown grass under the pines. On the edge of one of the ponds I started a flock of eight Ground Doves. Regulus calendula and Parus carolinus were heard in full song. Zonotrichia albicollis were numerous in the thickets along the roadside where I also saw a few Song Sparrows. One of the latter sang fully & in perfectly.

The King necked Duck could not be driven from this chain of ponds but she became very shy after I had shot her mate and flew from one place to another. Some young people on horseback told me that a pond further along the road was "full of Ducks" so C. and I drove there. We found a beautiful little pool about an acre in extent fringed with cotton bushes and surrounded by woods through which, on one side, the road passed near the water's edge. In this pond were ten King necked Ducks (6♂ 4♀). They were so tame that we watched them fishing at a distance of less than 40 yds. I did not shoot any because I had no means of getting them

The birds shot in the same place were all water fowl or finch-like  
 deep and as there was no wind they could not drift a shore  
 I accordingly had to be very close to the pond and shoot out  
 for them. (I got a pair of Regulus calendula in full song to day. Many  
 pairs of Parus carolinus were seen.)

Tallahassee, Florida.

1889

March 18

Early morning clear and warm with high wind  
Clouds gathered by 10 a.m. and about noon a  
succession of heavy showers with lightning began &  
lasted until sunset.

Took breakfast at p. 45 and started at about  
7 with the boy Wiley as driver. The morning was  
perfect save for the wind and birds were singing  
on all sides, chiefly Mockingbirds & Cardinals.

By the roadside there were many wild flowers  
conspicuous among them a large shrub which I  
take to be a species of <sup>Pyrus</sup> *Pyrus* (*Aronia*?) with  
deep pink blossoms, a perfect thing fully as  
beautiful as a wild apple. The wild plums  
were past and nearly all their blossoms shed  
although on the 16<sup>th</sup> they seemed to be at their  
prime. Mistletoe and live oaks in flower. Also  
what I take to be the gum cherry, a large tree.  
Also *Cornus florida*. I see both Americans if I  
am not mistaken, the *Ostrya* the more abundant  
of the two and just leafing out.

We drove directly to the pond in the woods  
where I saw the Ducks (*F. collaris*) on the 22<sup>nd</sup>.  
They were all there this morning, or rather, there  
had been some change for to day there were  
8 ♀♀ and 4 ♂♂. After some manuevering my  
boy drove them within shot of the place  
where I lay concealed. I got three of the  
drakes together and firing only one barrel dropped  
them all. One, however, afterwards rose, flew  
across the pond & got into some bushes so  
I only secured two. We then drove back to

the chain of ponds near the road and in the further one found a Scaup (*F. affinis*). My boy flushed her and I lying in wait on the well between this pond & the next, dropped her as she was crossing it.

I then turned my attention to Snipe and quickly shot five without a miss one bird going off wild. I also shot two Meadow Larks flying, a House Wren and a Bachman's Finch.

Our next stop was at a pond on the left of the road. In it were several Grebes, a Fulica and a pair of Ring necked Ducks. The latter were very tame and I waded out to within 30 yds of them. Getting both together I fired but somehow undershot them wounding the ♀ so that she could not fly, however. She dove twice & got into some reeds where I lost her. I missed two easy shots at Snipe here starting six in all. Most of them were flying 100 yds. ahead.

From here we drove to the pond where I shot my first Grebe (on the 14<sup>th</sup>). In it I found to day three pairs of Grebes, very noisy and very tame. I missed three shots at them, one at a pair copulating. Then I killed four in succession. Most of the time that I was pursuing them about it was raining so hard that I could <sup>only</sup> see with greatest difficulty. Perhaps the Grebes were temporarily blinded. The water came down in a perfect flood and as the storm showed no signs of abating I finally started for town, getting pretty wet during the drive. Shot three Mallards at this pond. I think they are English. Shot only one Snipe here.

Marianna, Florida.

1889

March 21 Clear still and warm, a perfect day.

Came to Marianna, from Tallahassee last evening to hunt Wild Turkeys. Engaged the services of W. R. Hartfield a noted Turkey caller who awoke me this morning at 4 o'clock. He started a few minutes later by wagon and drove out of town about 5 miles ~~reaching~~ by moonlight. The woods very beautiful in the pale light, the dogwood trees in full bloom showing like living masses among the darker pines. A Pine Warbler sang over, and so other sounds save the chirping of crickets.

Reached our destination, Baker's plantation, just as the eastern sky was reddening and driving down to the edge of a swamp left the horses and entered the woods, along the edges of which Cardinals and White eyed Vireos were singing and a pair of Barred Owls hooting and cawing loudly. Passing through a belt of open woods, chiefly of beeches and magnolias with an undergrowth of *Cornus florida*, *Pitheca* <sup>*Halimolobos*</sup> ~~occidentalis~~ <sup>*diffusa*</sup> in Red bud we came to the edge of a cypress swamp. Hartfield called here several times but his yelping *yup-yup-yup* echoed among the trees without response. Moving along a few rods at a time he called again & again but in vain. Meanwhile I was chiefly occupied with drinking in the marvellous beauty of the woods as the twilight faded and the daylight grew and in listening to the birds. Such a medley of sounds! I have heard nothing like it since the Belvina experience of 1876. The air rang and the woods echoed the sound. Cardinals, Carolina Wrens, White eyes, Hermit Thrusters (L.), ~~1888~~ Warblers, Mockers, Puncas, *D. dominica* and *Regulus calendula* all singing as if they would burst their throats, and then the Woodpeckers! In every direction their drumming and call notes filled the woods. Most of them seemed to be *C. carolinensis* but there was at least one

Hysteronotus plicatus. The hooting of the Barred Owls was almost incessant and decidedly the most impressive and prominent of the various sounds.

About sunrise we returned to the plantation and shouted to the driver to bring the wagon. While waiting for it heard a flock and saw a flock of nearly 200 Florida Quail which passed overhead and pitched into the swamp. Finally the wagon came and we drove a mile or more beyond the plantation. Pigeons and Field Sparrows were singing in several places among young pines. Then plunged into the woods again and drove down to the edge of Chippola River, a swift stream over its banks flooding the bordering cypress woods. While Huntorfish was off tramping about in search of buckings I took a shorter walk along the margin of the river. Started a Blue Heron (A. carolinensis) which afterwards came back & flew over the wagon giving me a fair shot. I wounded it badly but it escaped. I also came upon a pair of Wood Ducks but they swam across the stream while I was wading a distance and I only saw them some way down the end of range. The drake was a beauty and his brilliant coloring, especially the pointed bill, was displayed to great advantage as he crossed the open water in the swamps. I also saw a pair of adult & Cooper's Hawk which dashed past the wagon within 15 yds. just before I got my gun loaded.

At this spot small birds were even more numerous than at our first stopping place. In addition to those already mentioned I heard one Vireo olivaceus in full song, four or five Melanerpes erythrocephalus giving the tree knock call as they hurried themselves on the topmost branches of the huge cypresses, a pair of Red-shouldered Hawks were seen several Barred Owls hooting all the while. There was also an

Marianna, Florida.

1869

(March 21)

home high. I also saw a *Hesperisicus varius*. Wooded  
hedges were numerous along the main. A large flock  
of Florida Grackles were singing in a cypress  
over the stream.

Throughout the woods dogwood, redbirds, Oriole eye and  
the snowdrop tree <sup>(Halesia dipetala)</sup> were abundant and in full bloom.  
There was also a shrub which I took to be *Crataegus* which  
bore cyms of snow white flowers. The oaks, & red gums  
beches and red maples were in about half way; the  
cypresses just out with tender green young foliage.

Finally Hartfield returned and we started back to  
town. Crossing the plantation we started several large  
flocks of Meadow Larks and Grass Finches but heard  
none of either species sing. Along the main road we  
found Carolina Doves numerous in flocks and I saw  
two, one flying. In a pond which we passed several  
Carolina Grebes were calling. The country is similar  
to that about Tallahassee but less rolling the soil  
more loamy or sandy with little clay. The roads  
are hard and smooth. The woods are ever more  
beautiful than those near Tallahassee having more  
variety and more flowering shrubs (The red bird is  
wintering near Tallahassee and the <sup>(Halesia dipetala)</sup> tree is  
rare with it here and in the *Spina* trees) Pines  
predominate over hardwoods on the higher ground.  
*Quercus australis* is common and I saw much *P.*  
*mitis*. *P. taeda* is perhaps the most numerous pine.  
In the *Clippela* swamp the ground was everywhere  
traced over with opossum foot prints. Hartfield  
also saw an old track of a Turkey. Buzzards  
of both species were seen in small numbers.

Mass. // Got back to the Milton House at 9.30 a. m. and spent the forenoon on the piazza and in a grove of cedars. Purple Martins about a martin house, a King bird sitting on a tree in the garden. Blue jays & Mockingbirds numerous. Yellow-rumped & Palm Warblers about the cedars.

6 P. M. started for Chippola. We're having supper with a crippled eyes boatman, Mammal by name, to paddle us down to see the plant life. A distance of 20 miles by river but only 7 by road. Hadfield was to drive down "woot" from Turkey at sunset if possible, & meet me at the river landing about dark.

In reaching the river we found the boat which we had engaged gone. After a long delay searching for it we rode back to town on an ox cart, got some saddle horses and started for another boat which was said to be at the trestle bridge. This boat we did find but it was 3 P. M. before we started off in it (6 P. M. by eastern time).

I found Chippola River a beautiful stream, about as wide as the Assabet, with a current averaging probably four miles an hour. Mammal paddled steadily & vigorously and we made nearly half our distance before dark. The scenery was beautiful the river passing most of the way between high banks wooded with pines & various hardwoods with an undergrowth of red bud & dogwood in full bloom. There were many fine large white lilies ones to me growing near the water's edge & in one place forming a long bed of snowy white so thickly were they massed. In places there were clusters of pink or salmon azaleas

being in the water. We also found some large limestone ledges in one of which were several caves said to extend in for a long distance.

The water in this stream was clear and cold, & fish are said to abound. Otter & Beaver are both abundant. The latter cut down large trees along the banks and devastate corn fields near the river. Mammal killed a large specimen last year. Hartsfield constructs this. He has seen numerous fresh bear signs within a year. Neither Beaver nor Otter are systematically hunted by any one. The Beaver sometimes dam the small tributaries of this river and flood the adjoining plantations.

The most marked feature about this river was the almost total absence of birds, in the ten miles we covered before last I saw only one Kingfisher, a pair of Wood Duck and a Pileated Woodpecker, the latter flew from a hole in a cypress as we passed and directly started from its roosting place by the sound of the paddle, after dark we heard a few Barred Owls.

One bird, however, I have omitted or rather left for special mention viz, the Wild Turkey. One of the chief objects of the trip was to get a shot at one if possible but we passed mile after mile without either seeing or hearing one. At length after the sun had set and the twilight deepened so that the trees began to look darker again

the day I gave up all hope and stowing my  
 gun away in the bow was eating some lunch  
 when Mammal suddenly called in a  
 whisper "see that bucking". I seized the gun and  
 looked in every direction but the right one. "In the  
 top of that cypress on the right" again prompted. Then I  
 saw him out. A big black  
 object squatted on a horizontal branch of a  
 tall cyp. or half concealed by a bunch of moss  
 over which he craned his long neck to get a  
 better view of our boat which by this time had  
 actually passed the tree. In vain I tried to put  
 the gun on him - I could not turn far enough  
 to the right. Mammal, however, speedily swept  
 the boat around, I drew a careful sight on the  
 birds neck and pulled the left barrel of the  
 old Youks gun. There was a blinding flash then  
 through the gloom we saw the big bird come  
 crashing down striking a branch and falling  
 a cypress knee before he finally reached the  
 water. We paddled to him and I lifted him  
 into the boat with difficulty for he weighed,  
 as we afterwards found, only an ounce or two  
 short of eighteen pounds. Hartsfield said that  
 he was fully three years old. The fore part  
 of his head was blue the hind neck purplish  
 red, the wattles white. All this I learned  
 next day for it was too dark at the time  
 I shot him to make out color at all. I  
 found he was injured for a specimen as the  
 feathers on a large space on the left side  
 of the breast were completely rubbed off by his  
 fall. I finally made a good specimen.

Shooting a  
 Turkey

Any birds on any man was shot of the 8 who, of this season. I have  
 at 11. It twenty. His that I shot in a badly larger than a  
 had with although Mammal pronounced him fully grown. It  
 after it or smelt an alligator.

1887  
March 22

Marianna, Florida  
Merritt's Plantation

Clear and warm with a light breeze. A delicious day.  
He reached the plantation about 8 P. M. Last night and found Hartsfield waiting at the landing with a horse & buggy. In a few minutes we were on our way at the hour when I had a common endeavor from P. M. Alford under the gentleman in charge. He told us that a flock of 17 "Turkey" and "Cuckoo" birds in an oak grove near the plantation. Hartsfield had failed to roost there that evening but hoped to find them next morning.

We were afield at day break Hartsfield striking for the cypress swamp along the river while I was posted on the edge of the oat field where I crouched behind a pile of logs. Slowly the east reddened and day broke. Until the sun, a great red ball, rose above the pines and scattered the mist that had shrouded everything when I first took my stand. The air was very damp and absolutely still. I could hear Barred Owls hooting in every direction and as it became lighter the woods and fields rang with bird songs and calls. Cardinals, Carolina Wrens, Hooded Warblers, Pine Warblers in the woods, Meadow Larks out on the broad fields, Woodpeckers hammering among the stumps, a pair of Red-shouldered Hawks soaring over a swamp. A Purple Finch chinked a few times in a pine near me and then burst into full song. In the bushes Towhees

"see-cep" a castle among the Co. s. He being so  
high in the distance. About 11 o' clock I saw  
a Turkey buzzard fly over to the fields for  
the woods. I saw a pair of Canada Wrens, both with  
the bills filled with pine needles, came to my log  
heap and finding me in possession, scolded vig. loudly  
awhile, then retreated. On the 11<sup>th</sup> I heard  
the sharp quip of a Turkey but it was doubtless  
the result of imagination. Finally the report of  
Hartfield's Gun broke in on the still air with  
a crashing roar which echoed through the trees.  
A few minutes later he fired again. I then  
started for the house flushing & killing a meadow  
lark on the way. The ground in the outfield  
was literally covered with Turkey toes.

After an hour or so Hartfield appeared looking  
very crestfallen. He had found the Turkey roost  
in some cypresses by the river just as the birds  
were leaving it. He saw seven fly down and  
alight in the bush. Following them he flushed  
one within 20 yds. getting an easy cross shot but  
missing or rather only breaking one of its legs.  
A little later he got a long shot at another that  
flew from a tree.

About noon we went together to the river, I on  
horseback. Hartfield called many times in vain.  
Once a Turkey gobble-obble-obble in the distance  
but it would not come. The bush abun. with  
Towhees & Thrashers. Much ground palmetto here.  
Sop along the river crowded with turtles.

Drove back to town late in P.M. after skinning  
my Turkey. Saw nothing of interest on the way.

1889

Hicksville, Florida.

W. 11.00. It is a warm day, not too hot at afternoon. Air very soft & dry. This a typical Spring day here.

Started at 7.30 A.M. with little Willis to drive and "Bingo" the pointer stowed comfortably on the seat of the buckboard. Took the Thomasville road, a new drive for me, and did not stop until we had reached the end. Had a good hunt in the afternoon a gate on the right and began the search, looking for making a good shot after a long search for a lot of cotton or corn. Duck seems to be against me. For nearly the whole forenoon passed before I fired a shot, although Mr. Brennan over the same ground put up eight birds yesterday killing 25 birds. That to-day "Bingo" beat field after field of wrens and brown sedge without so much as getting an old scent. At length we reached Long Pond, a sheet of water perhaps half a mile long. I went down to the shores and flushed a snake killed it. Saw an alligator about 6 ft long asleep on a log. Heard a single Grackle and Kingfisher and saw an Ardea herodias.

Returning to the wagon found that Willis had scolded down a lot of fine Great Blue herons. I had flushed from some brown sedge. I trod up on one and "Bingo" pointed two in good style. I getting all three easily enough.

We saw nothing more until after lunch when we took on the edge of a small pond under some pines. No water fowl in this pond but in one or two hundred yards further ~~down~~ I shot a Florida Gallinule and saw a pair of

Grebes, some on eight Coots, three Blue winged Teal,  
and a pair of Lesser Yellowlegs the latter flying.  
The Coots were scattered about among some tall  
dead weed stalks. I heard their peculiar talking  
before I saw them. The Gallinule was swimming in  
clear water near some grass. The Teal were all ♂♂  
in full plumage. They were too shy to permit me  
to approach. That day I find two shots and a Grebe  
but missed. While diving around this pond Birgo  
made a point on the edge of an impenetrable  
thicket of greenbriar. Two Quail flitted up & dropped  
again before I could shoot; I heard others rustling  
on the leaves. "Birgo" would not enter the thicket.

We found the next Covey on a hillside among dense  
brown sedge and young pines. "Birgo" came off his  
point, found us, and then led me back. The birds  
were wild and I missed with both barrels. They took  
to the woods where I could not find them again.  
"Birgo" soon after found a Covey in wild plum  
bushes in a deep hollow. I made a double as they rose.  
Willie failed to mark the burrows but I finally started  
five in some pines & missed a heap shot at them.  
The last covey found to day was lying among some sprouts  
of a young live oak in a ploughed field. They were wild  
& I find only one barrel getting my bird. One of them  
slighted in a furrow in this field but neither the dog  
nor I could flush him. I finished the day by  
killing two quail & missing two others on the edge of  
a pond where I shot at a pair of Teal on the 18<sup>th</sup>.

To be rising freely early this morning. Hear 1 Archibalds,  
Mockers, Bluebirds & about 5 Towhees probably *P.*  
*erythrophthalmus*. Saw many Meadow Larks in flocks all  
about. Purple Martins about grounds near the negro cabins.

Tallahassee (Fla.) to Thomasville (Ga.)

1889

March 29

Early morning cool, abusive frost. Middle of day very warm with light N. wind. Entire day cloudless.

We left Tallahassee at 9.30 a. m. and drove to Thomasville (Ga.) reaching our destination at 5 P. M. There was little change in the general character of the country until we were within about a mile of the state line when the hills melted gradually away and a slightly uneven but northern broken region succeeded, very monotonous, chiefly covered with pine woods (the timber especially heavy) with occasional barren looking plantations and a few cypress swamps. Red bud, buckeye, and a pair of <sup>a. n. n. n.</sup> *Asalia* appeared just north of the state line and were seen almost everywhere beyond but the Cherokee roses, which throughout the hilly Tallahassee region lined the roadsides with walls of snowy white flowers, were few and scanty after the state line was passed. I saw only one red bud (at Lake Hall in the Tallahassee region, *Bonrus florida* was equally common in both belts.

Birds were abundant throughout the Tallahassee region but scarce after we passed the state line. In the flat pine region towards Thomasville I then adult *Ardea carolinensis* (and a white bird which I took to be a young of the same species) about small ponds, one *Hytornis* and a pair of black butchers sitting on a fence by the roadside, Hermit Thrushes and White throated Sparrows were the commonest birds observed and both extended over the entire distance traversed. Mocking birds were equally numerous and ubiquitous. I heard the *Turdus*

Calamita singing. Along the roadsides, chiefly in Georgia, we passed, at least a dozen Gogswold Thrushes and in a cedar in front of a house where we halted to eat lunch I discovered a nest of one of these birds. The ♀ entered it, settled herself and remained sitting for about ten minutes, then flew down into the road where the ♂ joined her and fed her with a large grasshopper. The ♀ quivering her wings and uttering a low continuous chatter like that of a young bird. I did not examine the nest but suspect the bird was laying and had not completed her set.

Just as we were entering the outskirts of Thomasville I heard the peculiar squeaking of *Picus borealis* and the next moment discovered the bird running up the trunk of a small pine. I did not see one in the Tallahassee country.

Carolina Doves were seen at intervals during the drive usually in pairs, sometimes three together, in the middle of the road in sandy places. I heard two ♂♂ cooing in some low pines, the first heard this season. No Ground Doves observed.

Very curiously not a single Sparrow Hawk was noted during the entire day. I cannot understand their apparent total absence from this region.

Thomasville, Georgia.

1884

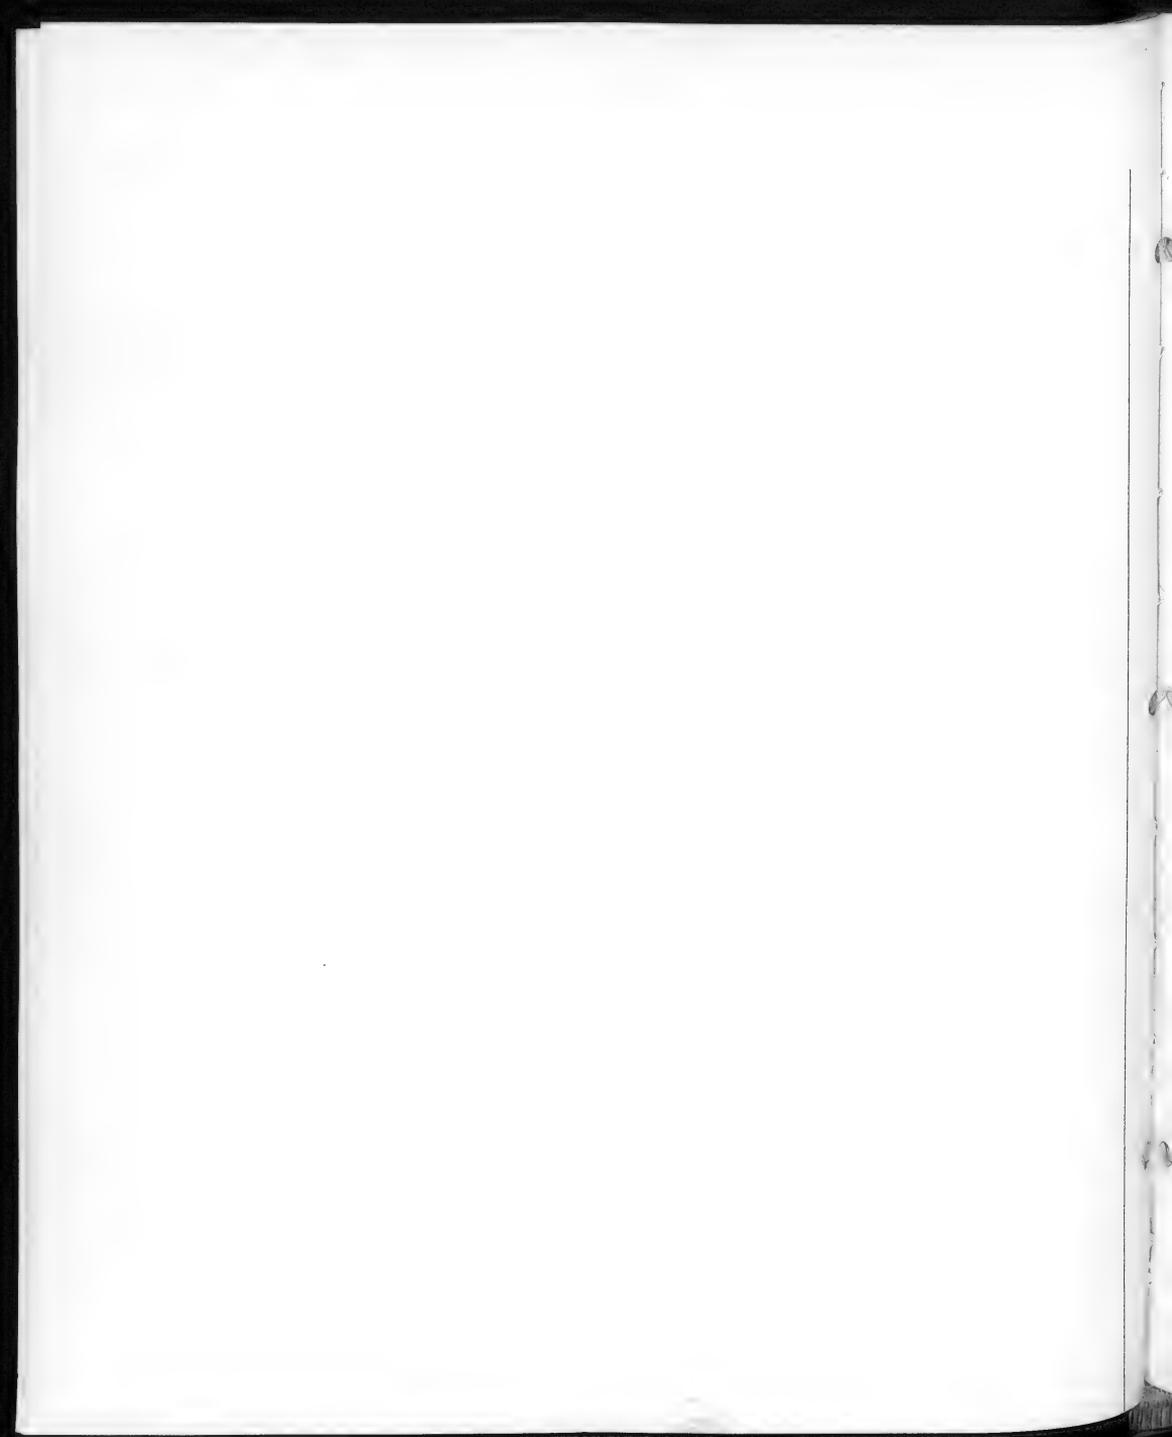

March 30

Clear and warm with light south wind.

Hiring a saddle horse I spent two hours or more of the forenoon riding through the woods near town. The country is nearly level with no decided hills or hollows. The soil is sandy, the woods chiefly of pines (almost entirely Parastralis) which grows rather openly (but not as scattering as in lowe Florida) with a few oaks (chiefly black-jack) intermingled. The ground beneath is grassy with many low bushes and vines in places. I saw no palmetto.

Birds were fairly numerous. I heard Indigo Bunting, Cardinals, Carolina Wrens etc. and two Pencas the latter singing in low pines about 200 yds. apart. They were in full song and I spent several minutes listening to their delightful music. I also saw a pair of Vireo flavifrons in an oak, both silent hopping from twig to twig peering about under the opening leaves in the usual listless indolent manner.

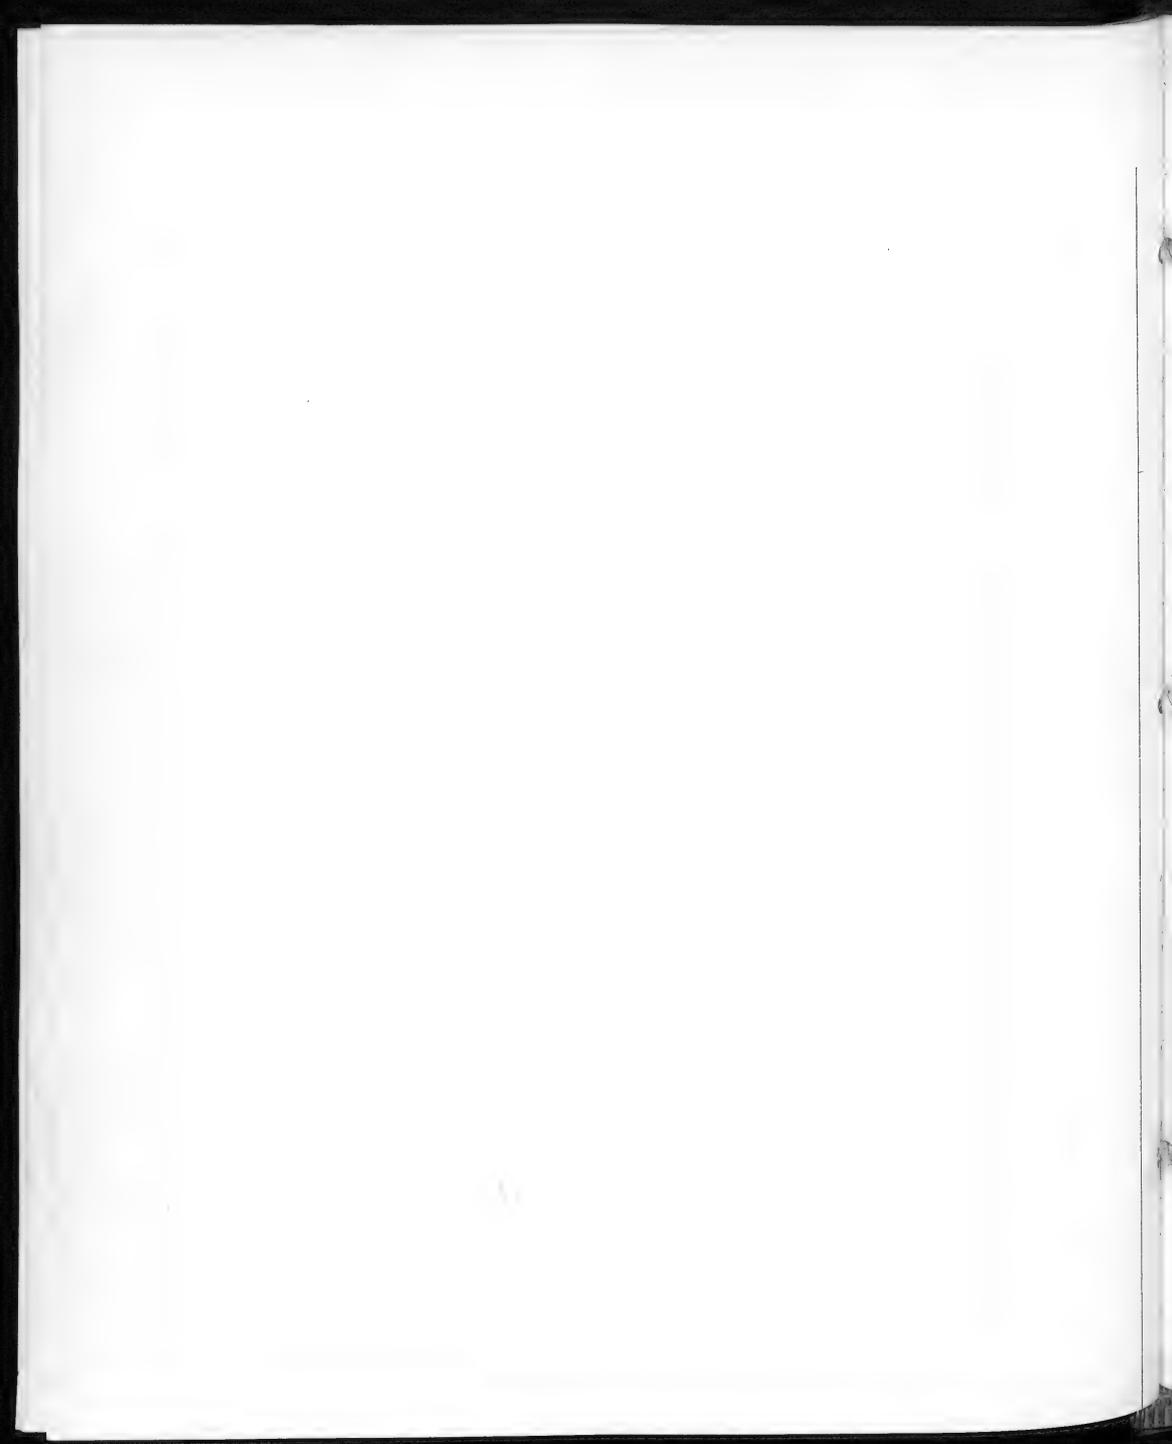

We left Thomasville for the north at 11.45.

1888  
April 11

The sky was clear, morning clear, clouds gathering in the afternoon & finally obscuring the sun.

Covered with Benton by 4 P. M. Boats Row directly to the house and putting my boat in the water started down river under sail before a strong S.W. breeze. The sun was shining brightly and the air soft and warm. Song Sparrows were singing but very curiously I heard no other birds whatever although we saw Robins, Red-wings (two large flocks) and many Crows. The river was low for the season and in most places gaits within its banks although Brimfield and running with a strong current. The Great Meadows were faintly green and in fine condition for snipe with pools of water glistening everywhere among the short grass. Over their entire extent Scudder Frogs were croaking, their peculiar snoring notes blending into a continuous roll that swelled and sank as the breeze rose and fell. With the exception of the trill of *Bufo americana* I know of no sound more characteristic of water in April days on our Massachusetts marshes. I heard it however, at Saldoban last month. The toads have not started yet.

No large birds except Crows were seen until we passed Ball's Hill when we came in sight of three Herring Gulls sitting on a group of tussocks on the edge of the main channel. They were all adults and looked brown white presenting a beautiful appearance as they stood in graceful, easy attitudes occasionally spreading their wings to the sun. Below them were seen Sheldrakes. W. Merganser two females and a fine old drake. He sailed to within 100 yds. before they flew. As they skimmed off close over the water the green head and coral red feet of the drake were very conspicuous. All the time that we were approaching

... I saw a Cooper's Hawk near sailing over the  
river clad hill to the west where I found the young  
of 1886 and 1887. Doubtless they will breed there again this  
year.

The main object of our trip to day was to search  
the Bedford Swamp where the Red-tailed Hawk bred  
last year in the hope of getting another set of their  
eggs. The river was so low that we had to land at the  
outer birch island and cross the intervening meadows on  
foot. As we approached the pines a Red-tail flew out  
from them and we felt sure of a second nest but  
a close search failed to reveal one and during the two  
hours of moon that we spent in or near them we did  
not see either of the Hawks again. Newton climbed to  
the old nest & found it deserted and dilapidated. In these  
woods we saw literally only one bird besides the hawk,  
a woodpecker which looked like *Hypoglycis* but which  
could not be identified certainly.

After lunch we crossed the river and spent an hour  
in the Cooper's Hawk woods and the adjoining Sandy fields.  
On the edge of the latter among some bushes interspersed  
with pines we flushed a pair of Carolina Doves. One of them  
alighted in a birch when I shot at it wounding it badly. It  
flew out over the field then returned alighting again in the  
bushes where Denton finished it with his 32cal. I heard a  
*Sitta canadensis* and saw a Sharp-shinned Hawk. A few  
Fox Sparrows scratched among the leaves on the edge of the woods.

On the way up river saw six Sheldrakes (two fair drakes) &  
a few Red-wings sitting on the trees & bushes but none singing.  
Tree Sparrows numerous in the bottom bushes. At the house at  
sunset Robins & one Meadow Lark singing. A pair of *Sitta*  
*canadensis* at the boathouse landing. Watched the ♀ into her nest  
in an old Woodpecker's hole in the elm. It was practically inaccessible.

Cambridge, Massachusetts.

1889

April 26

Fair with occasional periods of sunshine & several light <sup>mid &</sup> showers.  
At 9.30 a.m. driving to Silver Brook where, dismissing George & the horse, I plunged into the swamp. As I forced my way through the brush I disturbed a Robin at work on her nest in a maple fork. Red winged Blackbirds, Swamp Sparrows, and a few Song Sparrows singing in the thickets about me. Saw fresh muskrat tracks on the mud. Reaching the tall maples I found in them a pair of Chickadees and a Flicker, the latter "laughing" at frequent intervals. In the distance several Crow Blackbirds were calling. A few Hyla picturata piping in the wooded swamp; many toads (Bufo americana) trotting out in the open meadow between the two groves of maples. At least half a dozen Red-wings in this meadow scattered about singing on the tops of low bushes over the water.

Crossing this opening I entered the bushy meadow next the railroad and looked closely for Virginia Rails in its scattered clusters of bushes but although old droppings were numerous, I could find no birds. Seeing a pair of Grackles (I. ~~discolor~~) alight behind me I retraced my steps and found them in some dense alders along a ditch where they behaved very like Rusty Blackbirds feeding along the edge of the water and glitting from cover to cover as I followed them cautiously. Finally I shot the ♂ in a low alder and the ♀ in the top of a tall maple to which she flew. I lost the ♂ although he certainly did not fly. He was probably only wing broken and escaped into a bordering tangle of button bushes where I traced him a little way, indeed, by an occasional feather.

I next crossed the railroad and began to look rather carefully for snipe, especially as I had heard a down

or more shots, several of them double referrals, in this direction during the preceding half hour. I had just passed the first hedge of alders and was skirting some low willows (not over 3 ft. high) bordering the large meadow beyond when a Snipe rose in the open about 80 yds. off and flying only a few rods dropped among the thickest of these willows. A moment later another sprang from a cove that penetrated the copse near where I stood and I knocked him over easily enough as he topped a bush within 80 yds. of me. Without pausing to look for him I hurried to the spot where I had marked down the first bird. As I expected he had run some distance but he ran finally within close range and I riddled him by a single shot as he was dipping down behind a thick willow. Both birds proved to be very fat and heavy. The ground for many rods on every side was thickly bored and "chalked" by them.

The rest of this meadow proved a blank and I did not go beyond it as I heard more shooting on the north side of the Mass. Cen. R.R. and concluded that that ground had been pretty thoroughly hunted. I did not see the sportsmen, however.

Returning I found six or seven more Grackles where I shot the first pair & fired at another through thick brush without effect. I do not remember to have seen them in this swamp in former years and do not understand the reason for their presence there to-day.

Finished my tramp by Samturing slowly through the old Brickyard swamp, trying to identify some of its old landmarks. Nearly half of its former area has been scooped out by the brick makers; the remaining half has been nearly drained, only a little water remaining in the ponds and ditches. Nevertheless I saw at least a dozen Red-wings there as well as Robins and Swamp Sparrows. The muskrat's have a large house in the pond where I used to shoot Coots.

The meadows were everywhere green & the grass in places 6 in high. The bushes and many of the maples were covered with small leaves and the willows were in full bloom. The general appearance of the swamp was that of about May 10<sup>th</sup> in some seasons. <sup>Set 1/2 saw a pair early in the day. In fact the vegetation is everywhere at least ten days ahead</sup>

of the birds. A day or two in our garden showed a few of them yesterday and to-day its lower half is white with them. I read and saw them or four Yellow-crowned Cuckoos on the meadows to-day.

April 30<sup>th</sup> 1889.

Concord, Massachusetts.

Clear and cold with high N.W. wind.

Concord with Spelman by N.H. train returning at 6.40 P.M. He spent the day on the river going as far up as Fairhaven Bay.

The weather was so unfavorable that birds sang but little and probably spent the day in sheltered places. At least we saw and heard but very few. As we passed the Home garden several Grackles were flying about among the trees and Robins hopping over the lawns. Just below the new granite bridge we heard a Great Flycatcher, above the railroad (Fitchburg) bridge a Meadow Lark was whistling and on the French farm I heard another. In the Dregue Brook meadow a ♀ Marsh Hawk was beating about. Above Pine Acre bridge where we landed to take a photograph a Lizard calling Lizard was whistling "Bob. White" at regular intervals. Doubtless "Bob-white" it was one of the boys that Chadbourne and I found there last October. I do not remember to have heard the Bob-white call so early in the season before.

Lizard calling Lizard  
"Bob-white"

We landed next at the tall pines opposite the Cliffs. As we approached them a Red-tailed Hawk appeared and alighted in a maple. We looked carefully for its nest but in vain. There were several birds in these pines, a Parula (which I shot) two Pine Warblers and a Miniotilla, all in full song, and a Sitta canadensis whistling. Spelman shot one of the Pine Warblers for me. As we were eating lunch in the wood path that traverses these woods we heard what I took to be an Osprey whistling although the notes were coarser and less shrill. Rushing down to the meadow I saw a pair of Red-tails high in air over the Cliffs the ♀ soaring in circles, the ♂ about 20 feet above her, poising, his wings beating rapidly but with a loose butterfly like motion. The next instant he swooped down past her when

Parula

Sitta canadensis

Buteo borealis

(April 30) I saw his red tail distinctly, I think I have seen this  
once before, at Upton, Me., if I remember rightly, in May 1881.

Our next landing was at Lee's Bluff where we spent an hour or  
more. A pair of Crows evidently had a nest in the pines  
as they kept flying about, cawing. He also saw a Red bird  
(probably one of the pair just mentioned,) which flew out from  
the pines but we failed to find any nest.

Several Purple Martins were flying over the Bay in company with  
a few White-bellied Swallows. Of the latter we saw perhaps twenty  
along the river including two at the Manor - evidently inspecting  
their old nesting place in the big elm by the landing. Near the  
French farm we saw several Bank Swallows.

Swallows.

We saw no Ducks and, very curiously, no Phoebe either on this  
trip or on April 11<sup>th</sup>. I cannot understand what has become  
of them all.

In thickets near Fairhaven we heard a Towhee and saw two  
Brown Thrashers, Field Sparrows singing on all the hill-sides  
and a Grass Finch near his new bridge.

Richardson tells me that Black Ducks, Sheldrakes and Golden eyes  
have been unusually numerous on the river the past month. Ducks  
On March 31<sup>st</sup> Southern Geese were seen by Albert Brown on the  
Ludlow Meadows. Geese

The vegetation is unusually far advanced for the season. Vegetation.  
Cherry trees in full bloom in the gardens and Brad's in the  
woods. Saxifrage and Houstonia in full bloom also and columbines  
out on sunny slopes. Poplars covered with small leaves and branches  
decidedly green in places although the leaves are only beginning  
to unfold. The grass green everywhere even on the meadows.

1884

May 5

Clear and the warmest day of the year thus far. Wind west light in the early morning strong through the midday hours, dying nearly to a dead calm at sunset.

So concurred with Spelman of P. M. train, returning at 6.35 P.M. The day was very warm and delightful in every way save one. There were few birds about and these few mostly silent. The cause of this puzzles me. True there was a good deal of wind at times, especially about noon, but it was a soft wind and, moreover, it did not rise until we were a mile or more on our way and previous to this there were few birds singing. At the house I heard nothing but a high Pewee and a Nuthatch, the latter merely hawking. On the way down river to "the tent" where the wind first struck us - I heard ~~nothing~~ but one bird, a Song Sparrow. He saw a few Red-wings and further down a great many, all in small flocks in bushes <sup>or</sup> near the ground.

Several Spotted Sandpipers started from the bank as we sped past under sail and we saw one or two Kingfishers.

We had a glorious sail to Carlisle bridge and nearly two miles beyond our ground new to me. A little below the bridge the river widens until its breadth nearly equals that of Fairhaven Bay. The north bank is high and heavily wooded for two miles or more.

On the way down we saw a Butor borealis and a B. lineatus nearly opposite the Hawk woods. The Red-shoulder was sailing about low on the meadows when the Red-tail appeared and began to soar near him. He immediately attacked his large cousin rising above and swooping down upon him screaming shrilly & incessantly. The Red-tail took these attacks very

Mysterious  
silence and  
scarcity of  
birds

Sayornis

Tringa

Buteo lineatus  
attacking  
B. borealis

(May 5)

coolly although he soon scaled off across the river to the swamp on the Bedford shore.

Landings near the "Hawk Woods" we lunched on the banks of the brook that skirts the sandy field. A portion of this field had been recently sown with oats which had attracted many birds. There were six or seven Cowbirds, seven or eight Red-wings and several Grass Finches & Sparrows. A few White-throats in bushes along the wall. I killed two Cowbirds at our first. While crossing this field we started a single Tit-Cuck. It rose from a piece of ploughed land and flew out of sight. As it passed within 60 yds. we distinctly saw its red breast. It piped in the usual autumn voice.

While lying in the shade of a pine eating lunch we saw a Cooper's Hawk rise above the woods on the hill and soar upwards until actually lost to sight in the blue sky. A Carolina Dove flew past us, alighted in a tall maple and cooed several times. At the upper end of the field we started five of these Doves at once. Two went off in one direction, three together in another, all alighting in the tops of isolated leafless trees. We heard them coo many times, two ♂♂ apparently answering one another from opposite sides of the field. In the Hawk Woods found a pair of silent Solitary Ticks, a pair of Pine Warblers & three or four *D. coronata*, also a pair of *Picus pubescens*, two *D. virens* or *H. inficifilla*.

The row homeward was delightful, the river nearly calm, many Red-wings rising, a Bittern preening on the south side of the meadows, a Carolina Rail calling. I shot a ♀ *Picus villosus* which was pecking at a rotten stick (neph) over the water. The ovaries were undeveloped.

Saw a few Swallows - perhaps 15 White-bellied one saw two or three Martins. Bushes green with young leaves. ~~Cypripedium~~ *Cypripedium* nearly out. Cherry blossoms beginning to shed their petals.

1889

May 10

Clear and hot (ther. 85° at noon) with a heavy shower of mixed rain and hail in the afternoon.

Yesterday the thermometer rose to 87° and as the night unusual heat was clear and fine I felt sure that there would be a rush of migrants in to-day. Accordingly I started for the Maple Swamp at 8 a. m. and spent the morning there, <sup>to</sup> Maple Swamp

As I drove up Sparks St. I heard two Parulas and a Minutilla singing in Dr. Weyman's big willow. The bridged swamp was alive with birds chiefly Red-wings and Yellow Parulas to judge from the melody of sound that came to my ears as we passed. At Alvirne Brook I got out and sent the man back with the horse. In the big white willows that shade the causeway were a little party of migrants including several Yellow-rumps & Cuckers (Minutilla) two ♂ D. virens and an Cup. minimus, the Warblers in full song. In the thickets outside the melody of bird voices was fairly confusing but most of the singers were apparently Yellow Warblers and Swamp Sparrows with a Cat-bird or two and a few Red-wings and Song Sparrows.

In the Maple woods bordering the brook I found Wilson's Thrasher (now singing), Water Thrasher in full song, two Least Flycatchers che-lat-ing at the top of their lungs, a fine old ♂ Redstart, a White-throat (Zonotrichia) or few Yellow-rumps, a Flicker and a Blue Jay, besides Robins and Swamp Sparrows. A Grackles was singing in the distance near the Heron pool.

The Yellow Warblers were also here as everywhere flashing like golden meteors from tree to tree chasing one another and singing as if they would split their little throats. I saw no females anywhere.

After shooting a Least Flycatcher and missing another I crossed the meadow to the middle maple island. Here I found a Cat-bird and six or seven Grackles. The latter

(May 10) were in the taller maples flying from tree to tree and occasionally reaching down into the tangle about Horn Post. I looked for nests but could find none. Perhaps they come to this swamp for mud!

In the east grove I shot two Least Flycatchers and missed a third. There were three Crows here, apparently hunting Robin's eggs, the shells of which I saw on the ground under a nest.

I next tried the north island. In some willows on its northern edge I came upon an interesting little company of birds including four D. coronata, one D. striata and one Vireo gilvus. In the better bushes just outside I saw a D. maculosa and a Sylvania pusilla.

Nothing of interest in the willow openings near the railroad bridge over Albany Brook. I looked closely there for Rails but could find no signs. Is it possible they have wholly deserted the Fresh Pond marshes? Certainly they are now rarer than if found at all. Heard only one <sup>(of course)</sup> ~~swallow~~.

In the Brickyard Swamp I found Red-wings, Swamp Sparrows, & Maryland Yellow-throats in fair numbers and Yellow Warblers swarming. Shot four Least Flycatchers in the tall willows at the east end of this swamp.

In the Maple Swamp the trees and undergrowth were delicate pale green, their leaves on the average perhaps  $\frac{1}{4}$  grown. The foliage casting a slight shade but not forming more than a thin screen against the sky. Tops of the maples touched with red some of them bearing great clusters of red keys. The white willows had the densest foliage; their catkins, nearly all down, showed the ground or water with buffy brown, caterpillar like forms. Foliage of undergrowth down in places everything, were the larch, Button Bush, breaking into leaf. Pyrus arbutifolia in flower. Royal fern & Sarsaparilla did to twelve inches high.

Vegetation

1889

May 11

interminably cloudy and clear with light showers in forenoon. Wind E.

Started for Belmont in the morning but it began to rain and I returned. At 3 P.M. I started again and drove to Waverly, thence up by the mill ponds to and through the "billows" and home by way of Prospect Street.

At the "billows" I got out and walked through to the further end. A White-eyed Vireo singing in the delta. A flock of L. albicollis in maple swamp scratching among the leaves. Two Bobolinks singing on the meadow. Red wings and Yellow Warblers as numerous as in the old times but I heard only a few Swamp Sparrows and no Rails or Bitterns. A Kingfisher sitting in a dead tree on the causeway. What fish can the brook or ditches afford?

Birds in the dens at Brown's, a Pheasant singing behind the open cellar and a few Barn Swallows gliding in and out the great barn door.

Prospect Street as wild and beautiful as ever but the deserted house on the summit reclaimed and inhabited again. Visited "Spring Glen" and found a D. virens singing in the big bush and a D. discolor in one of the wild apple trees which were undisturbed hives to-day - covered with a sea of fragrant rose-trilled blossoms among which countless bees dived & hummed. Two or three more discolor scattered over the adjoining barberry-grown pastures. Three Towhees along the walls. More L. albicollis in the thickets and among the ground juniper.

Finished the afternoon by a walk through the mixed cedar & yellow-pitch pine woods at the forks of the road. D. virens and S. auricapillus singing. A shy Thrush either hainsonii or some form of aliciae flitting along a stone wall keeping well out of range of my pistol. Found more White-Throats.

On the drive home heard two Coccy. virginicus in the

(May 11) village of Belmont and saw eight or ten Grackles in the  
swamp opposite the old Ludov place in Cambridge.

The country was very beautiful to-day. Apple blossoms a  
little past their prime but still effective at a distance and  
on some of the later trees perfect near at hand. Blueberries  
not yet out of blossom. The barberry bells beginning to show  
yellow but none open as yet. *Hillside pastures* and wood  
paths carpeted with violets the *V. pedata* (bird's foot) especially  
large and numerous this year. *Deciduous* blossoms anywhere.  
The foliage advancing fast, all the trees green, the birches  
and poplars already dense with leaves. The vegetation is still  
much ahead of the birds.

I neglected to note above that I heard a *Buteo lineatus*  
screaming long and loudly in the birds were just  
north of Prospect St. I could see Crowe diving down  
into the tree (a large oak) from which his cries issued.

Vegetations.

Cambridge, Belmont & Waltham, Mass.

1889

May 14

Alternately cloudy & clear with light showers. Wind E. to S.W., warm.

J. Dwight Jr. appeared at 9.30 A.M. with a horse and buggy and quickly provided me with a guide to spend the day collecting. He got off at about ten o'clock and drove directly to the Warren Run in Waltham. On the way we heard and saw many Orioles, Warbling Vireos, Least Flycatchers etc. a Meadow Lark and two Bobolinks near the Hickory place in Waltham, a Savanna Sparrow singing in the latter locality, a D. striata opposite the Warren place.

Arriving at the Warren Run we left the horse there Warren Run and started on the usual route. The place proved to be not materially changed save that the second growth is denser and taller in many places. None of the woods or thickets have been cleared since my last visit.

Birds were numerous as species, very few as individuals. He saw only two Towhees and not more than three or four Brown Thrushes. I found a nest of the latter on the ground well concealed under a fallen bird's top. It contained four eggs. The ♀ scuttled off under my feet & then flew. She made no noise whatever.

Golden-winged Warblers were as numerous as I have ever found them on this ground. We saw five ♂♂ & two ♀♀ of which Dwight shot a ♂ and I two ♂♂ & a ♀. I also shot down another ♂ but could not find it. Two of my specimens, a pair, I shot in the same tree a young elm on the edge of a swampy run. I killed the ♀ first and was wrapping her up standing directly under the tree when the ♂ came into it and began to trip not over 20 ft. above me.

Dwight started a Screech Owl from a cedar in

(May 14) The dove pitched pines on the hill north of the runs. It flew only a few rods but he could not mark it and we searched for it in vain. He also flushed a Grouse. I killed a Dend. caurubescens that was singing in a bird swamp.

Nashville Warblers were fairly numerous, Chestnut-sided not up to their usual numbers, Minorette rather scarce. We heard only one Grosbeak. Several Red-eyed Vireos singing. No Tanagers, a Plain Warbler in a new locality which I shot and another in the old ground near the entrance to the lane.

At 2 P.M. fog settled in from seaward and it began to rain. We started home by a roundabout way via the hollows. A few Swallows flying over the fields. A ♂ Marsh Hawk at the W. end of the hollows soaring over the road. I must look for his nest later in the old spot. Very few small birds along the causeway except Yellow Warblers and one fine ♂ D. maculosa which I killed. Nothing unusual seen on the drive home except a Meadow Lark whistling near the corner of School St.

At 4 P.M. I started on another drive with C. going around Fresh Pond, thence to and through Puzos Park where we heard a Meadow Lark whistling. Warbling Vireo, Oriole and Least Flycatcher in abundance everywhere along the road. A Cat Bird singing in elms.

Apple trees still in bloom but the blossoms faded to pure white & petals falling. Columbines at their best this morning some of the beds begun. Saw a pair of Yellow-billed Cuckoos in a tree over the road near Birds Pond.

Lythrum

Cuckoos

1889  
May 16

Clear and warm tempered by light S. wind.

To the Maple Swamp at 9 a.m. for the forenoon. Entered by the Alewife Brook path as usual. A Least Flycatcher singing in the willows on the causeway, a Cat-bird in the thickets behind these willows, and Yellow Warblers on all sides.

In the tall maples by the brook found several migrants a Turdus swainsonii (calling peent) a Dendroica caerulescens and a D. striata singing, and several Geothlypis trichas chirping and singing. A Vireo olivaceus was also a new comer to these woods since my last visit. Besides these there were numerous Yellow Warblers, several Redstarts, a few silent Veery Thrushes, two dull colored To. alberta and a pair of Flickers. Outside the maples in some low willows a Sylvania pusilla was dancing about in the usual erratic manner, jerking his tail and making occasional upward leaps after flying insects.

Crossing the meadow I passed through the middle island and entered the eastern maples. Here were two Least Flycatchers, three Grosbeaks (two ♂ one ♀) and a Robin or two besides another Red-eye and many Yellow Warblers. Females of the latter were collecting material for their nests everywhere to day. I shot several of them as well as one Water Thrush.

In the thickets north of this swamp I also shot a ♀ Robin much to my regret for it happened just by accident I mistaking the bird for a Gray checked Thrush.

Crossing the railroad I tramped one much of the open meadow to the north finding a Red-wings nest (in a willow) with one egg but shooting nothing except

a Savanna Sparrow which proved on dissection to be a ♀ with ovaries so undeveloped that the granulation was invisible to the naked eye. The bird was probably barren.

Returning I was passing through the meadows just south of the railroad and north of the Maple Swamp when a Virginia Rail began crying out in sharp tones in a thicket on the bank of Alewife Brook. Going to the spot where her cries issued I discovered her skulking through the birch tangle within ten feet of me. I shot at her twice with my 22 cal. barrel killing her the second shot. She would have laid within a week or two judging from the appearance of the ovary. This is the only Rail I have seen near Cambridge this year.

Georg met me with the buggy at 1 P. M. As we drove through Lake View Avenue on the way home I saw several Grackles carrying mud into the pines behind Mr. Smiths, an old timer breeding ground of theirs.

The maples were in dense leaf to day quite shutting out the sky in places & casting a perfect shade. Vegetation *Pyrus arbutifolia* still in bloom. A few ragged faded white violets. Noted no other flowers.

1889

May 17

Clear and warm with strong S. wind.

To Concord with Denton by 9. a. m. train returning by 6.47 train. At the Manns Landing we heard Orioles, a yellow-billed Cuckoo, a Dendroica caerulescens (singing in the big white maple), one of the Nuthatches, a Bobolink on the meadows and several bullfrogs. Starting down river by boat we began to see Spotted Sandpipers soon after passing Flint's bridge and near "the tent" the first Solitary Sandpiper. Between "the tent" and Bull's Hill we started perhaps fifteen of the former and five of the latter. At Denton's Hill the falling water had exposed an oozy flat of small extent at the mouth of a brook. On this flat we discovered five least Sandpipers. They were very tame and I killed two at one shot. The others flew off down river but we found them at the brook on our way home when I killed the remaining three.

Red-wings were fully as numerous as of yore but we found only one nest (with 5 eggs) although we looked in several likely places. My impression is that they have not generally nested yet.

All over the Great Meadows Bobolinks were collecting and singing filling the air with their jingling melody. Their numbers were fully up to the usual standard for this locality.

Orioles were not numerous. We heard perhaps three in the river maps. Least Flycatcher occurred as far down as "the tent" but none below that point. We heard no Warbling Vireos and what is still more curious no Cuckoos in the river thickets.

At Lee Davis's Hill we left the boat and walked through the woods to the pines where the Cooper's

(May 17) Hawks have bred for several seasons past. The first nest that Deaton climbed to prove to be theirs but it was empty although evidently new and beautifully lined with the white inner bark of one of the dead poplars numerous in these woods. There were no signs that this nest had been robbed but I fear that something has happened either to it or the birds. We did not see either of the latter but I think I heard one of them.

High among the tall pines in these woods several Blackbirds were singing. I shot a fine ♂ in the very pitch pine when I killed one in June 1856.

There were also several *D. virens*, many Cuckers (*Minicilla*) a Parula, a pair of *Vireo olivaceus* and two Wood Pewees. A Chickadee was at work excavating a hole for its nest in a poplar stump. I also saw a fine Jay and heard one Grosbeak. Of course Oven-birds were not wanting.

The heat made us so thirsty that we crossed the meadow to the brook which proved very warm. Following it up we finally came to its source a cold spring of delicious water at the head of the meadow. Near this spring in some sparsely growing alders we started a ♀ Woodcock and four young the latter nearly full grown.

The woods were in nearly full leaf to-day and the meadows looked as in early June, the Mount flags two feet or more tall. Lady's Slippers in full bloom and Barbary bushes in nearly full bloom. Birds for the violets and *Hamamelis* - a little past but still very showy and attractive.

Vegetation.

1889

May 29

Clear and cool wind north to north west rather strong. possibly from

Spent the morning on the Coolidge farm and beyond starting at 8.30 and getting back at 1.30.

As I left Mt. Auburn St. and entered the same part the school room a Grass Finch and Bluebird were busy in the field on the left and Grackles flying, with good for their young, to the pitch pine woods behind John Coolidge's. The old sand bank near the railroad has been dug out again and the Bank Swallows have returned. I saw ~~in~~ them and noticed some fresh holes.

Entering the oak woods behind the Cemetery I found them abundant  
 abun- with birds. Orioles, Least Flycatcher, Yellow-throated and Red-  
 eyed Vireo, Wood Pewee & Redstarts were all numerous and in full song. There were also two Black-polls, one Parula, one Nashville Warbler, and a Tanager, singing, and about Cedar Birds in pairs. A very Tanager  
 small Turdus bicknelli seemed to be inspired with uncontrollable T. bicknelli  
 curiosity regarding me for he approached within a few yards flitting from oak to oak, once or twice singing otto ovi. I shot at but missed him. I afterwards started an Swainson's Thrush from the T. swainsoni  
 ground and shot it but ruined the specimen. While watching the Bicknell's Thrush I caught a glimpse of a small bird dashing past and turned just in time to see a Sitta carolinensis alight at nest of  
 the entrance of what proved to be its nest - low down, in a natural Sitta carolin  
 hole in an old apple tree at the south end of the large hollow. The bird had its bill full of grubs and quickly entered the nest & fed the young. Afterwards I saw both ♂ & ♀ come ~~several~~ times with food.

In this apple orchard a House Wren, a Black-poll Warbler, House Wren  
 a Yellow-billed Cuckoo, and a Flicker, were singing. Least Flycatcher abounded & I found one of their nests with the bird sitting. English Sparrows were quite numerous, also, in this orchard.

The pond behind Mt. Auburn was unchanged. Several ♂

20

Red-wings were singing there and doubtless their mates were sitting on their nests in the floating island. A boy on a raft was catching small gold-fish with a dip net.

Crossing the road I heard a House Wren sing and shot both him and his mate. The pitch pine knoll on Friend's Hill was very beautiful the undergrowth having become much denser since my last visit. An Indigo Bird was singing in the great white oak, a Songer (the same heard previously in the Cemetery woods) in a pitch pine, a Pine Warbler in the distance and several Black-bills on various sides. There was also a cowbird in full song. I flushed a ♀ *D. carolinensis* from the ground and found the nest of the Indigo in a wild cherry thicket. It held one egg only.

The cedar belt beyond held only a Redstart or two, a Song Sparrow and a ♀ Indigo. A Warbling Vireo was singing in the valley to the south, a Purple Finch in the cedar pasture when I found several nests in 1869 (or 1870).

Next crossed to the "hog's back" near the Arsenal hearing a Warbling Vireo in the silver-leaved poplars on the way. On the "hog's back" heard a Wood Pewee, a blue flycatcher, and several <sup>Redstarts</sup> Ceryle alcyon. A Cat-bird (the only one noted to-day) a Geothlypis trichas, a Kingbird, and several Red-wings were seen or heard in the alder swamp to the east. A Redstart's nest in a tall alder, very conspicuously placed. I bent the bush down & found a Cowbird's egg & one of the Redstart. The latter jumped out as I lit the bush back. A fine grey squirrel, very tame, running on the ground in these woods.

In the extensive oak & chestnut woods across the railroad heard several Wood Pewees & Red-eyed Vireos. A Grass Finch singing in the fields outside. Near the trap-shooting house two pairs of Indigo Birds & a single ♂; one of the ♀♀ building. No Wilson's Thrushes anywhere to-day. I expected them confidently in the Arsenal woods, & Bobolinks. Only one Pine Warbler.

Robins & Orioles, Chipping Sparrows, Cedar Birds, Redstarts, Red-eyed & Yellow-throated Vireos, Least Flycatcher & Kingbirds fully as numerous as 20 years ago. Only two Cuckoos; about three Flickers. A pair of White-bellied Swallows near Mr. Auburn, Woods in full summer foliage. <sup>41</sup> species. Vegetation

1889

May 30

Cloudy and cool with occasional light showers.

I started at 8.30 morning to drive to and visit  
East the carriage just above the washed & cross roads on Belmont  
(to the south of) Arlington Heights thence skirting across  
country in a south westerly direction, passed the old "Owl  
orchard" (or rather its site for the trees were all cut down  
last winter), down into the deep valley at the head of  
the Cotton runs and finally across to the western end  
of Prospect St. where the carriage was set.

There were two Indigo Birds and a Purple Finch singing  
at the point where I started but no Prairie Warblers.  
I shot at one of the Indigos but missed, in the pasture  
just north of the Owl orchard I found two Prairie  
Warblers singing and much busy, but vainly for there were  
the scrubby bushes are in profusion are their pasture  
but they are rather small and thin as a rule. I found  
only one nest here - Field Sparrows in a red cedar about  
a foot above the ground. It held one fresh egg.

In the valley to the west of this hill I heard &  
saw many common birds but nothing of interest until  
I reached the swamp where the oak woods were cut off  
eight or ten years ago. Gray Chickadees have taken their place  
and already are seen and call. I was surprised to find  
on the north edge of this path swamp not ten yards  
from the old wood road an extensive bed of Dwarf Cornel Dwarf Cornel  
the first that I have ever seen in this part of Mass.  
It was in full bloom and fairly dense in places.  
I came upon it suddenly while looking for the  
nest of a Golden-winged Warbler a ♂ of which I  
shot in a solitary, small black oak between the swamp  
& the path. Needless to say I found neither his mate

(May 30 no nest.

The only migrant noted to day was a single W. Wren singing in oak scrub.

Common birds were numerous everywhere. I heard three Grass Finches, three Nashville Warblers, six or eight Brown Thrashers, three Wilson's Thrushes (one singing) two Cat-birds (they are scarce this year on all my grounds), a Grosbeak, eight Chestnut-sided Warblers, a Black-billed Cuckoo, one Pine Warbler and no less than four Indigo Birds. A Bobolink was singing in the meadows when I found the nest in 1874. On the drive home I heard two on the slope just west of the Belmont engine house and one in the fields at the corner of School St. below the Athens place.

1889

May 31

Clear and warm with strong S.W. winds.

To the Coolidge farm with Denton at 3.30 P.M. to find, if possible, the nest of the pair of House Wrens that sang on the 29<sup>th</sup>. In this we failed although D. climbed to & examined every hole that we could discover in the old orchard. He also inspected the Great Flycatcher's nest which I found on the 29<sup>th</sup> but it proved empty.

While looking for nests in this orchard Denton found a Yellow-billed Cuckoo's nest in an apple tree not thirty yards from where I took a set of eggs many years ago. On climbing to it he found it contained two young birds nearly half grown and two eggs. He left it undisturbed.

In the upper apple tree of the row that extends from French's Hill to the road I discovered a Redstart's nest with the bird on. It held four eggs besides one of a Cow bunting. He took nest and eggs.

My Indigo-bird was sitting on three eggs. She left the nest when I was about ten yards off and clumped at me anxiously. I did not molest her treasures.

Passing the Nuthatch's nest we saw the ♀ clinging to the trunk just below the hole. Afterwards I watched the tree for several minutes but no birds appeared.

The bad small boy evidently continues to hunt birds eggs in this orchard for I saw a fresh Wren's nest attached to the branch which had been broken off & left in the top of the tree, the withered leaves showing that it had been detached several days ago at least.

Counted seven Bank Swallows at the sand banks & watched them for some time playing about & entering the holes. Few birds singing this

Afternoon picnic because of the high winds. No records  
noted to day.

1889

June 1

Cloudy with very strong S.W. wind and occasional gusts of rain. Heavy rain during the following night.

To Concord with Denton by P. A. M. train. On reaching the river I heard the Nuthatches and soon afterwards saw the ♂ pursue a moth to the ground when it seized and carried it to a young bird, evidently only a few days from the nest, which was sitting on the branch of a pine over the avenue to South Bridge.

In the old stone boat house found a Plover's nest with five eggs slightly incubated. It was near the peak of the roof on a cross brace and so well concealed that I should have overlooked it had not the old bird flown from it within a few inches of my head.

Least Flycatcher, Orioles, Robins, Purple Finches and Chippys singing in the Mann orchard. No Cat-birds or Warbling Vireos there this year. A pair of Flickers have a nest in an ash over the avenue as usual.

Launching my Ruston boat we rowed down river to Holt's pond where we landed a boat the Bobolinks ground carefully. Although the sky was dark & the wind blowing a half gale and lashing the grass about the ♂ Bobolinks were all at their posts singing and as we progressed it was evident that they were calling their mates <sup>to</sup> the nests. We surprised one ♀ however and found the nest with five eggs. We also found a Cuckoo's nest only 12 inches above the ground in a dense thicket of elder & silky cornel. It held three eggs.

Denton left me at the lower end of this ground and landing across the river at Dakins Hill he went to the Cooper's Hawk's nest which was still empty & evidently deserted. He did not get back until past

June 1. four o'clock. During this time I searched closely for Bobolinks' nests and watched the female but without success. I also waded out to the middle of the meadows where I examined two islands covered with lily ferns & a few thickets of alders. Two pairs of Bobolinks here, two Carolina & one Virginia Rail in the intermediate meadows where the water was fully a foot deep. Searched for their nests but found only three Red-wings, two with 4 eggs each, one with three young. A Bittern perching. Found a Carolina & a Virginia Rail here. No Savannah Sparrows on the meadows this year.

Just as Denton was landing I saw a Bobolink alight and running to the spot flushed me from the nest which held five eggs. Returning to the upper ground we beat it again and I found a third nest, also with five eggs, near the tent.

Denton had found two King-birds' nests one with 4 eggs which he took. We reached the Manor at 6.15 P.M.

Heard one Oriole and a single Grosbeak on the river banks. No Warbling Vireo below Flint's Bridge this year.

Bobolinks in about the usual number. Not nearly as many Swallows as there should have been, considering the day, and only two Martins. A good many Chimney Swifts. Only a very few Yellow Warblers. Perhaps they are not nesting! Saw no less than six Red-wings' nests in the bottom bushes but only examined three, two with 4, one with 2 eggs.

Saw one Kingfisher and two Kingbirds. A Quail whistling at intervals in a thicket of willows on the Great Meadows side of the river. A Short-billed Marsh Wren nesting near the Oak Island.

1889

June 3

Cloudy and still all day with a dash of rain late in P.M.

To Grantville; a Wilkesby Hills! by 8 A.M. train reaching  
Denton at the station. As there was no depot carriage, there  
we started on foot striking up one Mangus Hill by a  
old road that wound about through the oak & chestnut woods  
and finally emerged or rather ended, in a valley at the  
base of the hill on the back side. This valley proved to be the  
scene of my House Sparrows last autumn & hence was huckle  
ground. In it we spent most of the day searching for  
nests.

The first find was a Wood Pewee's building in a chestnut  
on the hill. The second a Chestnut-sided Warbler with two  
fresh eggs, in hazel along a wall. The third a Chestnut-sided  
with five eggs on the point of hatching, this also in hazel.  
The fourth a Nashville Warbler with five young about half-grown.  
(details of position etc in my systematic notes); this nest found  
on the isolated knoll above the brushy swamp, the bird fluttered  
out under my feet (but was seen first by Denton). The fifth a  
Maryland Yellow Throat<sup>+</sup>, building. The sixth a Cat-bird with one egg.  
The seventh a Field Sparrow, with four eggs nearly hatched, built more  
prettily in a cluster of cinnamon ferns on the edge of the brushy  
swamp. The eighth a Solitary Tirois in an oak on the south side of  
Mangus Hill, in open maple & oak woods (to my great surprise this  
nest held 4 young nearly large enough to fly and well feathered).  
The ninth a Crow's in the fork of a chestnut on the north side  
of the hill. Denton climbed the tree and brought down three  
eggs much incubated. Besides these we found two Wood Thrushes  
nests, both empty, one evidently robbed.

Birds were very numerous in this valley. I heard two  
Wood Thrushes, a Meadow Lark, a Bobolink, three Grass Finches,  
four Chrobaks, two Tanagers, three Golden-winged Warblers,

about eight Chestnut-sided Warblers, two Indigo-birds, two Field Sparrows, two Yellow-throated Vireos, at least six Cat-birds, three Wood Peckers and very many Oven-birds and Red-eyes. In the deep pocket shaped hollow where we saw so many Geese last year several Red-wings were nesting. I heard only one Nashville Warbler but Black & White Creepers were numerous and in full song, although we saw both sexes carrying food to their young. No Cuckoo or Wilson's Thrushes, a flock of six or eight Cedar-birds in chestnut woods. One Goswain flushed.

Mangrove Hill is famous for its ferns. I found a solid bed of cinnamon ferns at least 30 yds. long by 20 yds. wide, the ferns five to six feet high forming an almost impenetrable undergrowth of singularly tropical appearance. There were also clusters of fine maiden hair ferns in many places.

Maple-leaved Viburnum numerous and in flower. Saw several fairly large Bass woods. Hazel abundant, very few Barbary Oaks.

1889

June 4

Heavy rain in forenoon. Afternoon clear and warm

Started for the Coolidge farm at about 3 P.M. taking horse car to Mt. Auburn. Passing the sand banks found all the sand swallows gone, their holes dug open, evidently the work of the small boy. In the Cemetery woods heard Wood Pewee and Vireo, both obovatus & flaviceps. A Flicker laughing in the apple orchard. Its mate flew from her nest as I passed. It was low down in an apple tree and had been cut open by boys. I looked in but could see nothing except the usual bed of chips at the bottom. The Least Flycatcher's nest was gone. As it was empty on the 31<sup>st</sup> and apparently deserted I have little doubt that the birds have torn it to pieces and removed the materials to form another nest. A pair of Yellow Warblers have just done this in my garden.

One of the Yellow-billed Cuckoos was sitting on the nest found May 31<sup>st</sup>. The other calling occasionally in the neighborhood.

The Indigo Bird's nest on French's Hill contained four eggs, one of which was distinctly hatched. I visited the nest and took the nest and eggs. The ♂ did not appear on the nest to-day. The woods on this hill abun with noisy English Sparrows. The only water birds nesting there are a Redstart & Wood Pewee. The Tanager & Creeper seen on the 29<sup>th</sup> ult. must have been migrants or wanderers.

Next to the Arsenal woods, just as I was entering them from the railroad I found a Redstart's nest in a barberry bush very conspicuously placed, at a height of about 6 ft. over a trodden path. It held four young. These woods were filled with birds - a Grosbeak, Catbird, Wood Pewee, and numerous Yellow

Warblers and Least Flycatchers singing. Cedar Birds here and there in pairs and small flocks. Several Red-eyes, Grackles and a pair of Orioles. Also a pair of Pine Warblers feeding chattering young, which I did not see but which doubtless were out of the nest. Altogether the hog back ridge and the swamp behind it contains so many breeding birds this season as any spot I have visited.

Crossing the railroad I walked slowly through the open woods to the W. W. Votterling here but a Wood Pewee or two. On reaching the swampy hollow, however, I found a Pilovis Thrush in full song.

The pair of Indigo Birds near the trap-shooter's shanty were in the same racket when I left them on the 29<sup>th</sup>. Both were chirping angrily at a cat which I started from the bushes. As soon as this source of alarm was gone the ♀ Indigo went almost directly to her nest in a small bushy black oak sapling where I found her sitting on one egg.

While searching the thickets along the brook I discovered a Black-billed Cuckoo brooding three young in a nest closely hidden in a dead bush cove. The old bird actually flew at my head as I put up my hand to the nest, passing within a few inches of my face & snapping her bill angrily.

In the fields just above Massie's, on the Adams place, a Meadow Lark and Bobolink were singing. As I was waiting for the horse car I found a Sparrow Hawk's nest in a hidden at least 40 ft above the ground. The ♂ was singing on the nest.

In the woods on the east side of the trap-shooter's field a Crow followed me about cawing angrily & incessantly & after alighting in the tree tops within 20 yds. of me. She must have had young somewhere near.

.889

June 5

Cloudy most of the day with two heavy showers. Warm.

To the Fresh Pond swamps at 2 P.M., taking Weston. He drove to the Glacialis and sent the buggy back. As we walked up along the east bank of the Glacialis we met the old man frog catcher, out in hand, stepping stealthily along the bank of Elvise Brook like a gigantic heron on the lookout for prey. He told me that he had supplied the Parker House with frog legs for over forty years. Formerly he could not get enough frogs to fill his orders. Now the market is often glutted. Frogs are sent even from Chicago. He never kills his frogs until they are ordered. Has a cellar full of them at all seasons. In the winter keeps a stove running to make them comfortable.

Crossing the Fitchburg R.R. we entered the large marsh beyond. Tabor had reported Carolina Rails numerous here Carolina Rails on the 3<sup>rd</sup> and we hoped to find a nest or two but the heavy rains of the past week had raised the water higher than I have ever known it to be on this marsh, at least in summer, and there was literally not a dry spot anywhere between the railroads even the large tussocks being submerged. We found one nest that I took for a Rail's but it was empty & water-logged. There were several Carolina Rails hanging in this marsh and beyond, possibly five being heard in all, the last one, as we were returning, on the marsh west of the Glacialis where I found a nest and eggs when a boy.

Several years ago a fire, one dry season, burned over much of the large meadow north of Glacialis and destroyed the grass and bushes as well as eating deep holes in the peaty ground. Over the whole of the

Fresh Pond  
marshes

East Rail swamp

(June 5) Burned tract cat-laid flags sprang up the next year and have <sup>since</sup> flourished to the practical exclusion of all other vegetation. In these cat lairs, near Alwip Brook, I heard a note quite new to me. It was very loud and resembled somewhat, the outcry of the Clapper Rail but lacked its harsh quality and vibrating undertone. I should render it as: kuk - kuk - kuk - kuk, kuk, kuk, kuk. given in a descending scale and rather slowly at the end.

We waded through the middle of this place although the water was nearly waist deep and the flags so dense that it was impossible to see more than a yard or two ahead. The muskrats had nests there with a space of clear water about each and numerous run ways through the flags. The only birds we could find were a few Red-wings.

In the long row of willows that crosses this meadow Denton shot a pair of Black-billed Cuckoos and in a vegetable patch, flooded by the recent rains, a Solitary Sandpiper which was unable to fly, its wing having been broken and healed in such a twisted shape that it was useless.

A little colony of Long-billed Marsh Wrens were settled in nearly their old ground near Beech Island (or rather where it once stood). I started at least six different birds but heard only one singing.

I saw a single Green Heron. Many Swamp Sparrows & Yellow Warblers singing. A Wilson's Thrush in a thicket where the ground was wholly submerged. A King-bird or two and one Cat-bird. Also a Grosbeak in the Swamp as we passed.

Reached home at 5 P.M. walking all the way back. Had a very disagreeable but nevertheless interesting tramp. Saw no Mallards & heard no Virginia Rails.

1889

June 6 Clear and cool with strong N. W. wind

Met Dr. W. Faxon in Boston this afternoon and went with him to Brookline by horse-car to hear the Least Bitterns which Mr. Francis has reported as breeding regularly each season in a cat-tail swamp along Muddy River.

Upon reaching our destination we were joined by Francis and by Dr. Faxon's brother and together we spent about two hours listening to the sounds that came from the swamp.

Notes we heard included Red wing & Blackbird and Song Billed Marsh Wrens, and some two or three different notes of the latter but none of the former. In fact I have never before seen so many Red wings congregated within a like area, in the breeding season.

As twilight began to fall a Carolina Kid occasionally uttered its hickling cry and after it became dark one began the cut, cutta, cutta cry and kept it up at intervals until we left the place. A little after sunset we heard two different Least Bitterns, cooing. They were perhaps 100 yds. apart and nearly that distance from us. The sound reminded me, as when I heard it at Wayland in 1887, of the cooing of a tame Pigeon. Francis says they have a wholly different set of notes which he compares to the song of a Sparrow. He thinks they utter it chiefly when alarmed by the movements of intruders, such as egg seeking boys although he has heard it when no one was in the swamp. He heard one Song Sparrow in this swamp but no swamp Sparrows.

The entire swamp contains possibly eight or ten acres of cat-tail flats which extend along both sides of Muddy River a sluggish, winding creek of ten yards

more in width. At the lower end the stream passes under the road and broad noisy streets pass along both sides of the swamp. On two sides, also, houses are crowded closely together and horse cars pass through one of the streets which, after dark, was brilliantly lighted by electric lamps. There was an incessant rumble of wagons, shouts of boys playing ball, shrilling of steam whistles, and occasionally the clatter of a street band. It seemed very strange to hear such birds as Rats, marsh Wrens and Least Nuthatches amid such surroundings. One side of the swamp is within the limits of Boston.

1889

June 7

Morning clear, hazy at noon, cloudy at sunset, evening damp and still, the light S. wind dying at sunset.

A red letter day, or rather evening. I had made an appointment to meet Fayon on the Mass. Central R.R. near Beach Island at seven o'clock P.M. to listen for the Strange Rail(?) call which we have both heard there lately, he on the 3<sup>d</sup>, I on the 5<sup>th</sup> of this month. I drove to the Pine Swamp & sending the buggy back walked in along the old wood road, or rather such portions of it as are not now obstructed or obliterated by the brick yard, tinement houses, etc. Reaching the old bridge over the outlet to Post Pond I found the <sup>bordering portion of this</sup> swamp much changed. The trees are all gone and the brook is lost in a succession of broad stagnant pools covered with convolvulus and <sup>surge</sup> by tall reeds & cat-tails. To the west, between the Pond & the railroad, stretches a vast bed of luxuriant cat-tails.

Here I heard a Carolina Rail and another bird absolutely new to me. The latter was ~~singing~~ <sup>intervals</sup> with few <sup>phrases</sup> of <sup>silence</sup> for about fifteen minutes. More of this soon!

I also saw a Spotted Sandpiper and a White-bellied Swallow at this swamp. Five Crows were circling & cawing about Post Pond.

Keeping up the Fitchburg a little way I climbed the high embankment of the Central. An Irishman's shanty with goats etc. on the site of Beach Island but the meadows between this island and the railroad embankment nearly as of old. Two or three Long-billed Marsh Wrens singing in the long grass. A Wilson's Thrush flitting in the maple swamp through which the Central cuts.

Keeping east along the track I found Bradford Honey peated, like a sentinel, at about the middle of the Big

(June 7) meadows. He had been out all day (at Longwood) & had had no supper. Was about to start for home etc. I pressed him to stay & offered a share of my crabs which settled the question. As we were eating it the big Rail(?) suddenly called in the cat tail swamp to the water very nearly where I heard him on the 5<sup>th</sup>. kuk-kuk-kuk-kuk kuk-kuk-cree-cree-cree The cry prolonged and so loud that it was almost startling though uttered fully 200 yds away. We listened freely an hour for another repetition (Faxon joining us in the meantime) but heard nothing except the usual voices of these meadows. It was nearly dark when we left; evidently our stranger is not nocturnal!

Red-wings, Swamp Sparrows, & Marsh Wrens singing before sunset, the last two well into the twilight, also. An occasional Coccyzus erythrophthalmus coveed in the willows & a Snowbird sang over somewhere towards Buck Island. As twilight fell Carolina Rails began to sing steadily (we had heard them before at intervals) on every side. To my delight there was also the old familiar <sup>note</sup> cry of the Tree Toad birds leaving their roost in the swamp beyond Buck Island. One Thryothorus palmeri piping vigorously.

At about 8 P.M. we crossed to the Pine Swamp & found the other quayster in full blast. ki-ki-ki-cree, sometimes ki-ki-ki-cree came his merry little refrain regularly every five or six seconds, from the cat tails about 50 yds. in. Every time a train passed he stopped, resuming only after its rumble & roar had died away in the distance. A Carolina Rail called kae near him & the throng of green frogs snapped out all over the swamp. Three times we heard a Virginia Rail in the maple woods about the pond. My guess on the strange bird is Sixt's Black Rail. Faxon said he felt sure the bird was a "pretty little fellow". He left him singing at 9 P.M. & I took the train with some on Faxon's at his summer house. A Carolina Rail <sup>was</sup> singing at Hall's clearing.

1889 Mass.

June 9 Cloudy or rather, with a thin curtain of cloudy haze through which the sun shone feebly. Very hot and sultry. Light S.W. wind.

To the swamps at 9 A.M. with Spelman. We left the busy Trade St. wharves at the Statehouse and walked in to the place where we heard the Little Black Rail(?) on the 7<sup>th</sup>. He was seen ~~in~~ this morning but later and at long intervals so, evidently he is a nocturnal bird. Spelman photographed his retreat.

While here we were joined by Faxon who had been listening, on the Central embankment, for the King Rail(?). He had heard him three times in two hours. We all went together to the Central and listened for about two hours more (from 10 to 12 M.). The big Rail silent during this period but to our great surprise another Little Black Rail(?) in the same cat-tail swamp, very nearly where the big Rail was calling on the 7<sup>th</sup>. Faxon, moreover, had heard a third Little Black Rail(?) on Rock Meadows last night at about 8.30 P.M. "The plot thickens!" Can there be three or four rare birds settled in this vicinity? Our only ground for assuming that they are R. jamaicensis is the fact that the description of the notes of that species given in B.P. & R. Water Birds fits our birds' call very closely.

We heard three Virginia Rails this morning one in the bushes just N. of Port Pond, the other two in the big meadow. Carolina Rails were singing intermittently, possibly by different individuals heard.

Cuckoos, all apparently black-bills, very numerous calling and flying in pairs, one following the other, back & forth across the meadow.

While listening for Rails we suddenly heard the hoarse quack of a Black Duck repeated eight or ten

times in the big meadow about 150 yds. off. The next moment the bird started out of the grass and after flying about 30 yds. alighted again.

After leaving the bird we crossed to Beach Island and listened awhile to the Song-billed Marsh Wren of which two or three ♂♂ were constantly singing. In a little piece of wild meadow, covered with short wiry grass, at the north end of the "Island" we started a Saw-whet sparrow which evidently had either eggs or young but we could find neither. The bird followed us about, chirping.

Saw one Green Heron flying across the tracks from Port Pond to Beach Island swamp.

Two Probsts singing, one in a meadow north of Beach Island, the other beyond Hill's Crossing in the Belmont meadows.

Took the 1. P. M. train for Porters & turned home.

1889

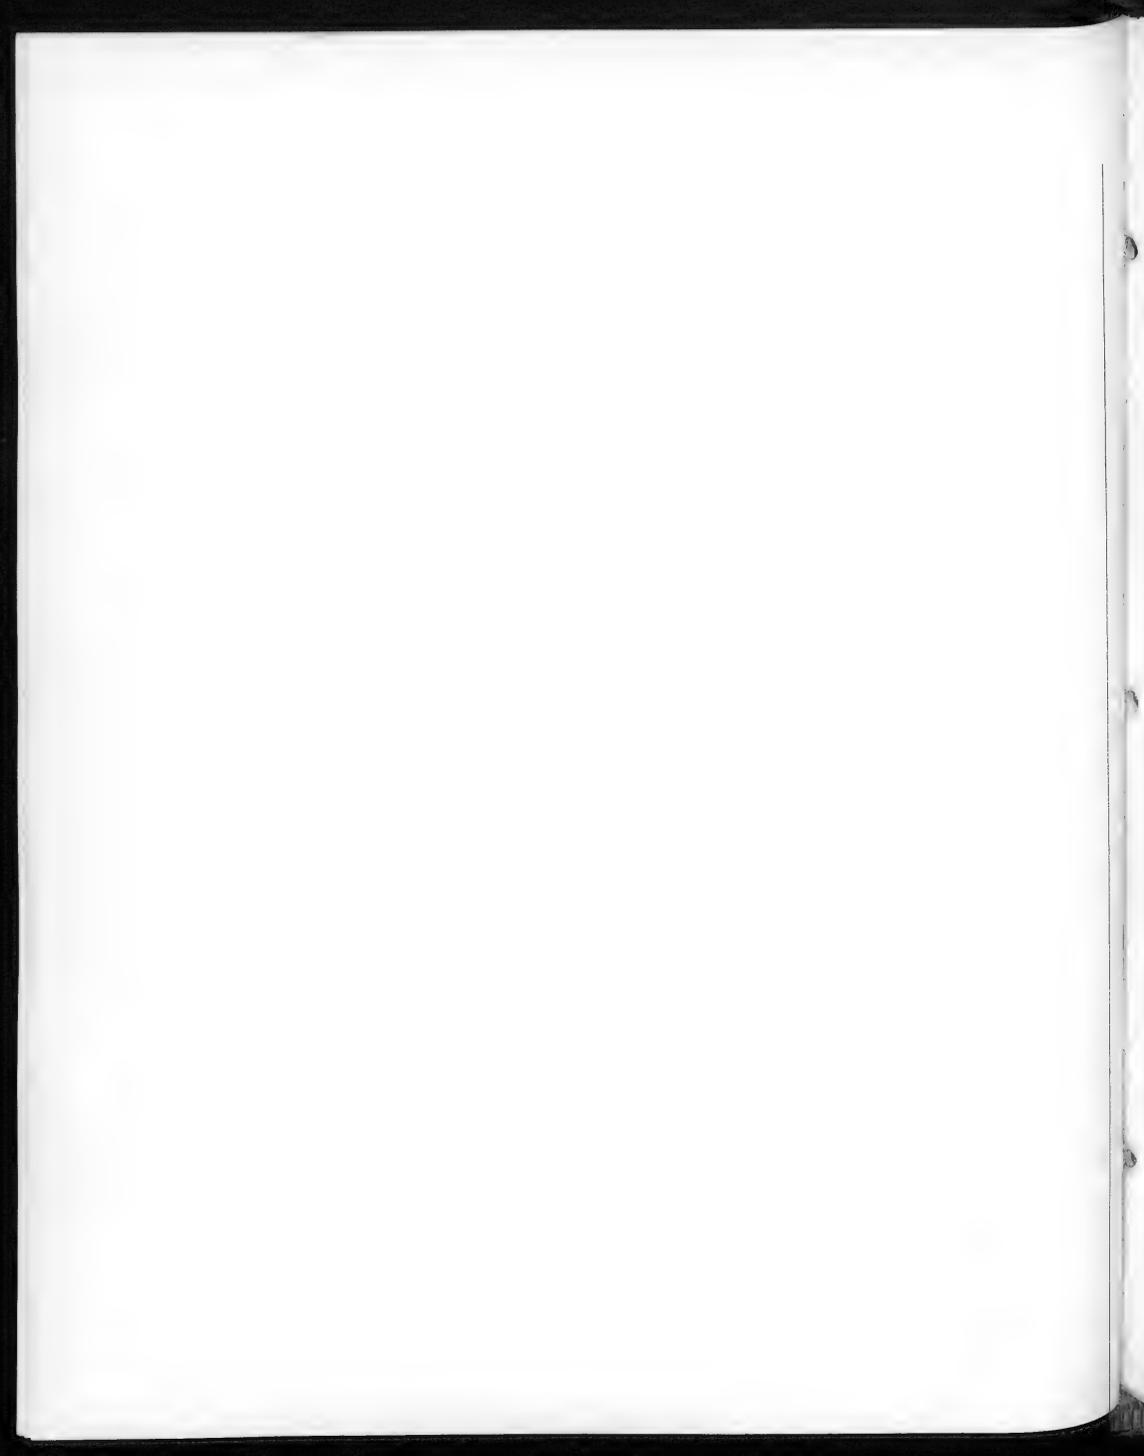

June 11

Cloudy with heavy showers in the evening. Warm & still.

At Cabot, started for the swamps with Bolles driving up in a coupe. Found the Little Black Rail(?) at Port Pond singing merrily. Thence across to the Central tracks where we listened nearly two hours, vainly, for the big mystery! Faxon joined us at about 7 P.M. At 8 o'clock we returned to the Port Pond Swamp & listened an hour to the birds there. The little Rail(?) singing almost incessantly. Sora and Virginia Rails also very noisy and apparently numerous.

At 9 P.M. Bolles and I started for West Cambridge Station. As we passed Glacialis bullfrogs singing in numbers. They seem to be practically confined to this pond though we heard one at Port Pond.

The little Rail(?) singing incessantly on Alvirge Brook in the marsh between the railroads. A single Sora singing in the meadow east of this brook. The marshes about the Maple Swamp and the entire Brickyard Swamp apparently harbor no Rails this year. We did not hear one there this evening.

1889

June 12

Cloudy and cool with light S.W. wind.

To the swamps with Denton at 9 a.m. Met Faxon at Port Pond. He told us that someone was shooting on the Cég meadow and we soon saw the fellow and heard him fire several shots. After a while he started out of the meadow and Faxon went around by the Central to intercept him. He said that he was killing Red-wings "to set up". Had already bagged four or five. Faxon advised him to stop the slaughter and he finally crossed the brook near Beach Island & went off in the direction of Arlington.

Returning to Port Pond I went into the swamp equipped with long wading pants which came up nearly to my neck. The first rod or two I found the mud-water nearly waist deep but after getting in a little way the water shrank to about a foot with mud clear bottom.

For nearly three hours I searched for the nest of the Little Rail(?) that we have heard singing so many times in this spot. Found two Rail's nests both in the tops of tussocks & both empty. One looked new and had some bits of green flags in the lining. Also found two Swamp Sparrow's nests both with broken egg shells.

When I first entered this swamp a Virginia Rail, evidently aroused by my intrusion, began calling among some willows & young maples. I finally went to the spot where the bird's anxiety became visibly increased & another, evidently its mate, began calling also. I finally found one of them young, a little thing only a few days old, squatting on the mud

made a tussle.

After eating lunch I entered the Swamp again, this time just south of the outlet to the pond. There is an immense tract of tall cut-tails here and in them we have heard many Carolina Rails of late. I searched the place pretty carefully but could find no nests. In a bunch of tall Canary grass I came on a Swamp Sparrow's nest with four eggs which I left.

I penetrated through a belt of dense young maples to the shore of Point Pond which looked familiar enough although the water was entirely covered by slime & duck weed. While near its edge I heard the ki-ki-ki-ki, ki-que of the Hippoboscus Rail (C). To my surprise it was near the south end of the pond. If the bird had not moved we have marked his position very badly with nets. He seemed to be in these bushes this afternoon. This swamp was terribly foul & offensive.

During the time spent about this swamp we saw Green Herons at frequent intervals. Swamp Sparrows & Red-wings breeding very numerous. Some Grackles evidently nesting in the maples & showing much anxiety. A few Wilson's Thrushes. A pair of White-bellied Swallows feeding young in a signal call on the Hitching Post. A pair of Kingfishers taking food to their young in a bank west of Point Pond.

Late in the P.M. Deaton & I hunted the big meadow. Found five Rail's nests in one little cove only a few rods in extent. All were empty but at least four looked new. Two Rails, evidently resenting my intrusion, called ti-hi-hi in the grass near the middle of the meadow. I got within a few yards of them but had only a glimpse at one which looked very small. Found a Swamp Sparrow's nest with four very blue eggs. Nest in canary grass, edge of ditch.

1889

June 13

Clear & cool with strong S.W. wind. The first fine day for a week.

To the swamps above at 9 A.M. Entering from the Fitchburg track on the east side of Alewife Brook I spent an hour searching that meadow for Rails' nests. Found absolutely nothing except a Red-wing's nest building. Heard only one Rail, a Carolina whinnying.

In reaching the Central R.R. I heard a little Black? Rail calling in the meadows to the north. He seemed to be well over to the brook which forms the outlet to Smith's Pond & was possibly beyond it either in tall canary grass or bushes. He sang about twenty times but as I approached, ceased. In grass so high as one's shoulders it is simply useless to search for a Rail of any kind & I gave it up in disgust.

Keeping me in a westerly direction I searched all the tussocks I could find for nests but without success. On a rude bridge that crosses the brook I found a Virginia Rail that someone had shot (it had a broken wing & shattered tarsus) and left there.

There was no Marsh Wren on the old ground at the west end of this meadow but the colony west of the cart path is larger than that from which it must have descended & which formerly occupied the east side. I visited the nests found on the 5<sup>th</sup> & was surprised to find five eggs in the one in the ditch. This nest was of unusually large size & from its exposed position was a conspicuous object. I took both nest & eggs.

Near the Marsh Wren's nest I roused a pair of Virginia Rails which evidently had young. Although they uttered their loud cries within a few feet of me

and ran around me incessantly I could not get a sight at either of them. I struck at the grass on one of them and could trace its retreat for several rods by the agitation of the stems as it sped through them. So swiftly did it run that the effect was very like that produced by throwing a stone 20 yards or more through the grass.

Saw Yellow Warblers feeding young out of the nest. Yet this species was in full song everywhere. Song Sparrows also singing freely and generally during the whole forenoon.

Reached home by 1.30 P.M. driving down from Gladwin's

Nothing has been heard of the big Rail for nearly a week.

1889

June 14 Clear and hot with light S. W. wind.

Met Torrey at Hill's Crossing, C., appointment, at 8 P. M. & walked down the track with him to the Big meadow, where we listened until nearly dark. Heard a new cry a low ghur-rar uttered in a rough almost growling tone. The creature making it (probably a Rail of some species) moved rather quickly through the grass, passing within a few yards of us and finally heading out into the meadow.

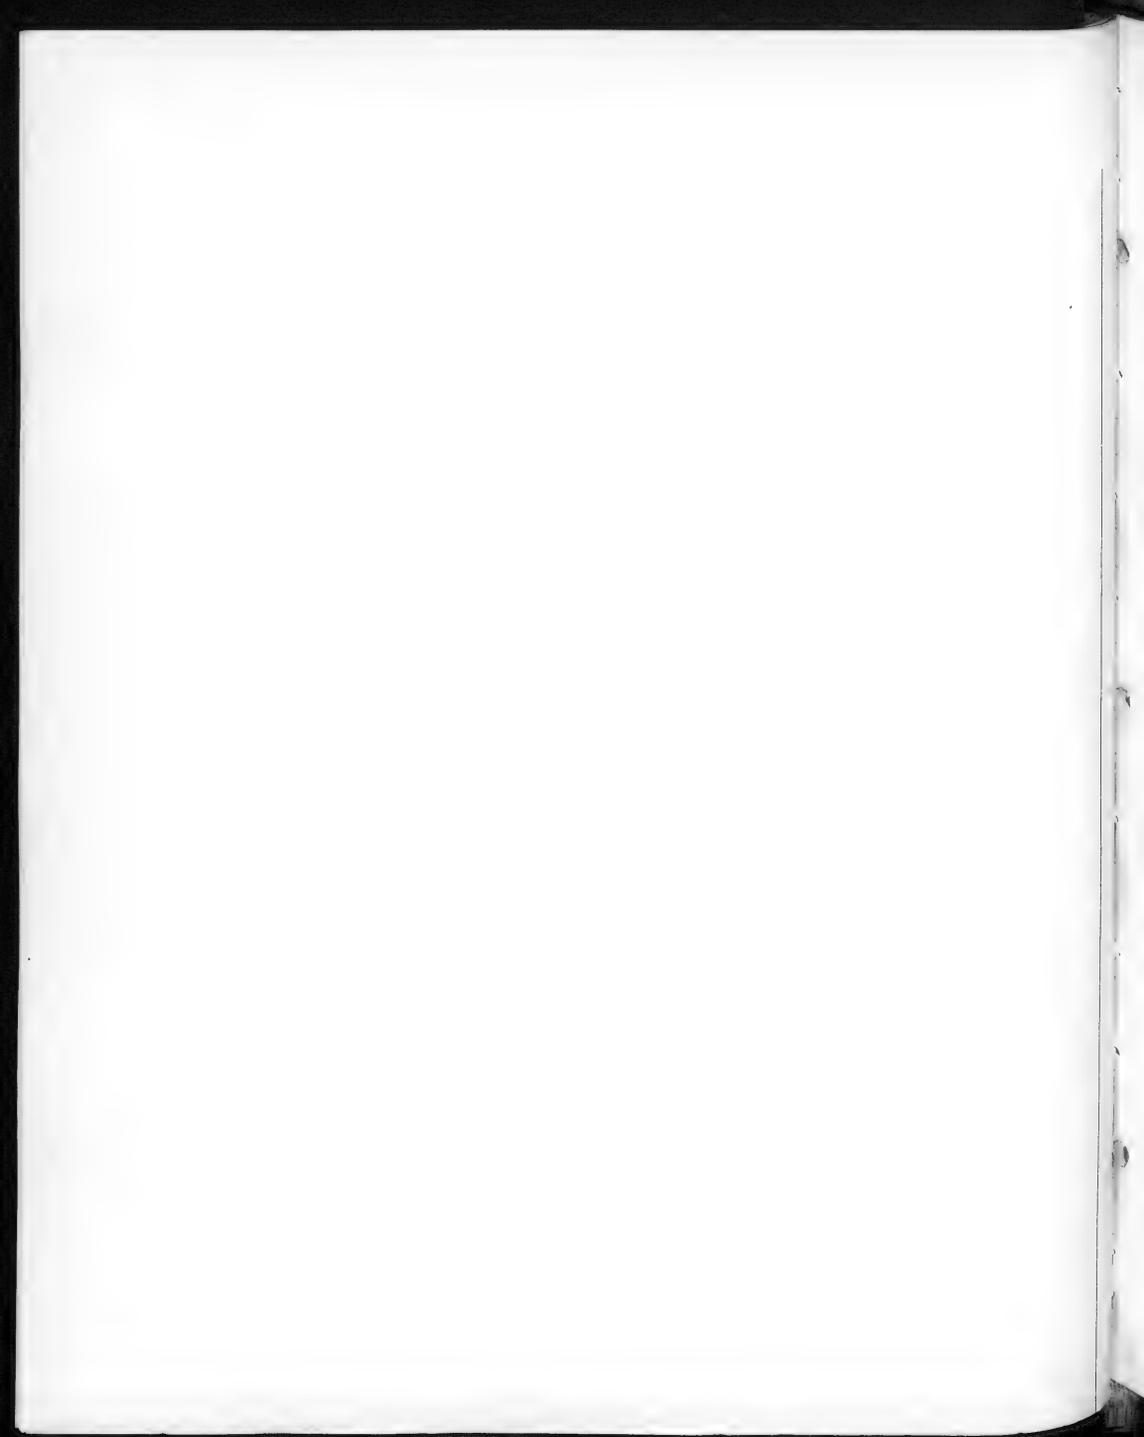

Heard three different kik-kik-kik, queer birds, one south of the Central, the other two south, one of the latter in the distance towards Port Land.

Carolina Quits very silent; one or two calling kà-c, these whirring. One of the former had a softer voice than usual its song sounding like kik-wee (which Torrey applies to all).

While sitting on the railroad embankment I saw a Least Bittern distinctly. It flew in the usual slow, sible manner from one bed of cat tails to the next. It was about 70 yds. off on the banks of Alewife Brook, not far from where we heard one of the kik-kik-kik birds. It is singular that we have not heard the coo, coo-coo of these really Least Bitterns established in this marsh.

On this railroad we found a dead Swamp Sparrow which had been apparently killed either by a train or by striking the wire. It was a ♀, evidently with young, for it held a small worm firmly in its bill & had finished incubating.

Cuckoos were flying about over the meadows this evening but they have nearly stopped calling.

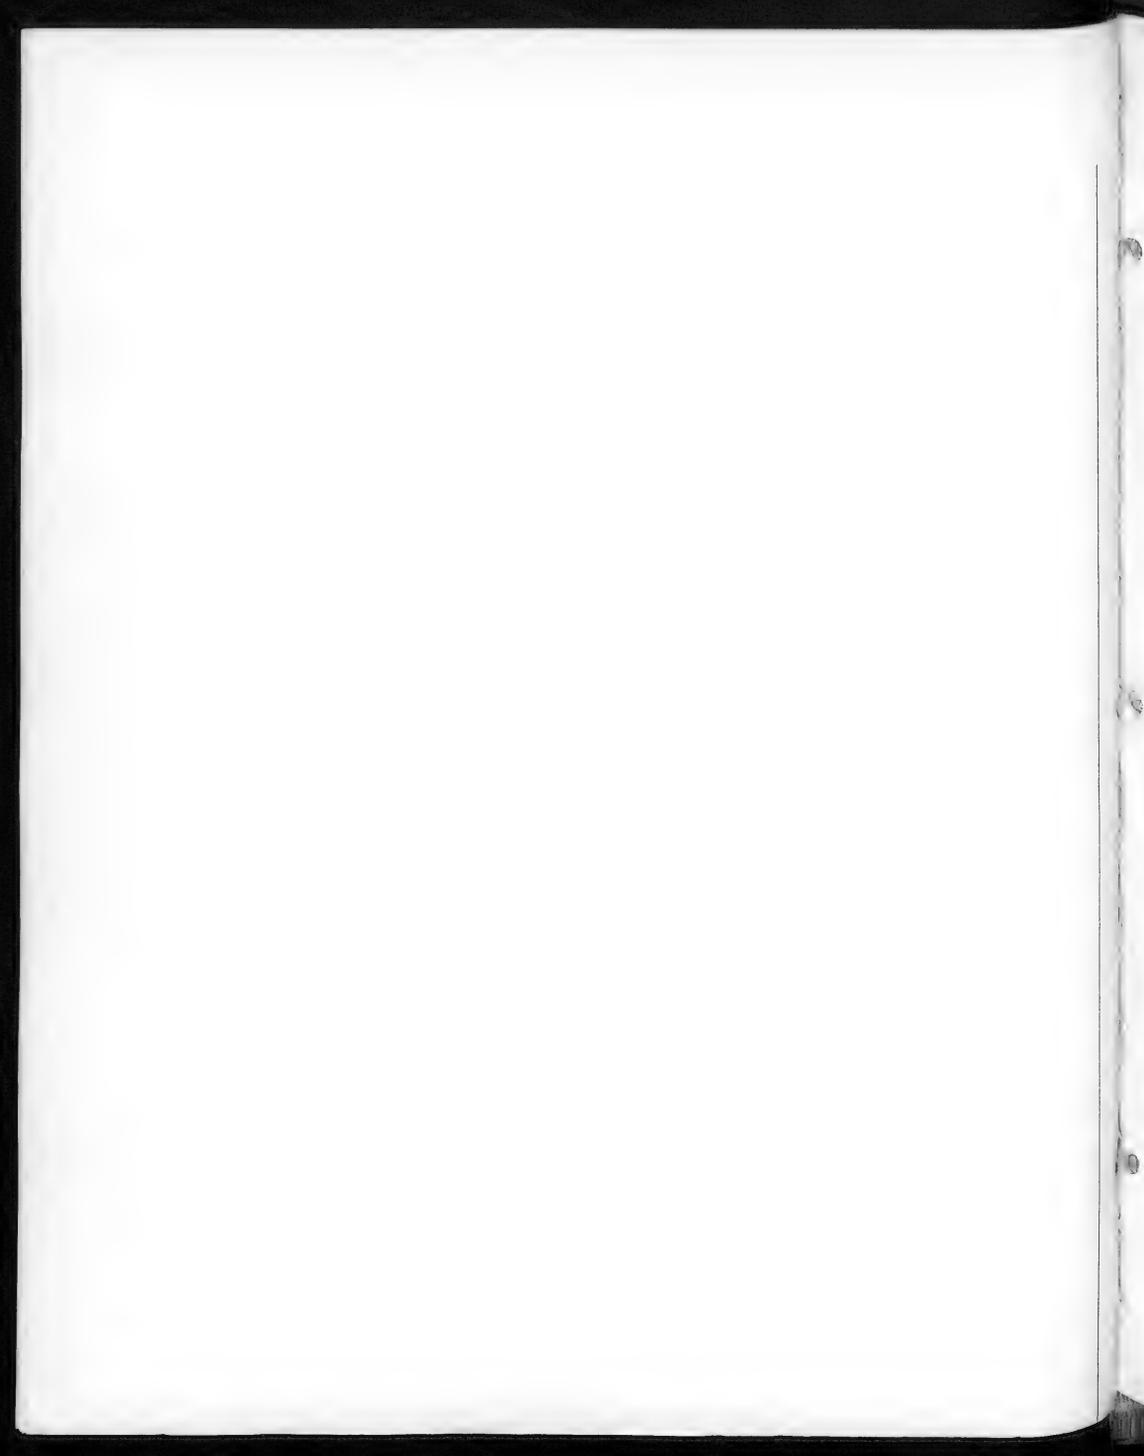

1887  
June 13

Clear with a heavy Thunder Shower in P.M. Evening clear and cool with strong S.W. wind.

To S. Dixington with Taxon by 6.23 train. Our object was to ascertain what birds are found about the reservoir and its bordering marshes. Taxon heard (on the <sup>is</sup>) there the kik-kik-kik cry, the ka-e of the Carolina Rail (only one bird), a short squawk which he did not recognize, ~~but~~ which came from the marsh, and a Whippoorwill.

This evening the weather was unfavorable for it was both too cool and too windy for birds to sing well. As we crossed a hilly pasture we heard a Grass Finch & several Song Sparrows, and started a Flicker from its nest in an old apple tree. About the pond Swamp Sparrows were singing vigorously during Taxon's last visit but we heard only one to-night. I thought I caught the kik-kik-kik cry once or twice in the distance but am not sure. We heard no Rails, Bullfrogs in full blast & many green frogs. Two Night Herons came over the pond from the west, about dusk, quacking loudly. The trip was a dismal failure on the whole. I reached home about 10 P.M.

1889

June 16

Clear, the heat tempered by a strong but steady S.W. wind which cooled into the night.

To Hayland by 1.15 P.M. train spending 2 hrs. on the cars and picking up Fayer at Mattoon.

On reaching Hayland we took rooms at the hotel and then started out in search of a boat.

Sherman, the only man who lets boats, was away but would return at four o'clock, his daughter said.

So we spent the next two hours waiting, lying in the grass by the roadside under the shade of an apple tree. It was very pleasant with

well worn grass blowing steadily, the sun over the meadows, Orioles flying a little in the orchard, a Meadow Lark whistling in a mowing field, several Marsh Wrens (*C. palustris*) singing in the tall grass along the bank, a young Purple Finch calling here incessantly.

Finally, Sherman came. He did not like to let boats on Sunday but would make an exception in our case. He thinks Black Ducks still breed in some places. About eighteen years ago found a nest fully half a mile from water on a hillside where he had cleared the land the previous winter. The nest was under a prostrate bush, tree top & held eleven eggs which hatched a few days later. The old duck sat closely.

Embarking in scow-shaped boat, large & roomy but without fast nor easy to manage, we started down river. It was very hot at first and we heard & saw but few birds. A *Ka-e* just above the upper bridge & a Pheasant near it. Two Pheasants about the next bridge but no nest visible. Marsh Wrens occasionally singing in the tall grass along the banks. Passing the second bridge we began to hear

many Marsh Wrens (all palustris'), two Bitterns began pumping about 200 yds. apart. As we rowed slowly down stream these voices became harder, less gulping & wailing. In short a change of position changed them from "pumpers" to "stake-drivers". Faxon was convinced of this. Jerry also admitted it finally.

In tall Canary grass standing in water a foot or more deep we heard on the right side of the river & about 20 yds. in from its margin the same bird that I noted during my last visit, June 1887. Chuck-chuck. chuck-chuck it called every few seconds, the tone of the sound very like that of a chuckling hen, the notes all on one key and without special accent. Faxon heard this mystery in this same marsh last year. There seems to be only one each year. We could think of nothing but a Gallinule!

Rowed & paddled slowly down to a little below the stone arched stone bridge. A Yellow-billed Cuckoo whirring ~~at intervals~~ on a hillside among pines. Marsh Wrens, at intervals, three or four near together, usually. A Night Heron & two Green Herons flying over high, ~~off~~. Below the stone bridge two Bitterns, one pumping, the other flying low over the meadow. One Swallow in numbers, one or two White-bellies, and an occasional Martin. Returning we saw two Wood Duck a little above the bridge. They passed within 75 yds. flying slowly, low down. As nearly as I could make out both were drakes. We lunched at sunset, floating in mid-stream just opposite the spot where I heard the coo, coo-coo bird last year. No cooing there to night. A Carolina Dove cooing in the pines to the west & a Parula singing there. Another Dove passing over high, flying very swiftly. A Bobolink also, flying high as to be nearly invisible, dropping a snatch of his merry song as he passed over us. ~~finally~~ A

(1889)

June 16

Spotted Sandpiper skimming down over the water. A Greenback and Wilson's Thrush singing and a Blue Jay calling (like a Red-shouldered Hawk) in the distance. Beyond us Marsh Wrens singing and scolding and Red-wings singing. The Bitterns jumping (sometimes two at the same time) as late as 8.10 P.M. but ceasing entirely after that. We were interested to observe that as twilight deepened the Barn Swallows all disappeared and Bank Swallows took their places. The latter we had not seen at all before but now they came around us by dozens skimming over the water until it was almost too dark to follow their movements.

After it had become fairly dark the bullfrogs, which had sung only intermittently - one at a time before, began to give us some of their choicest selections with a full chorus of a dozen or more performers each time. Some of them sang from the grass but the majority floating in mid-stream among the potamogeton beds. Some of them uttered the peculiar low whistle, which neither Hovey nor Taylor had heard before. I believe it is made by drawing in the breath just before each lull. The bass of some of these frogs was of fine quality but near at hand their combined din was rather interfering.

While listening to the bullfrogs I caught the distant call of a kek-kek-kek-cree bird. Rowing up river we found that it came from the brook meadows just above the railroad bridge. Landing and walking out on the embankment several hundred yards we got within a hundred yards of the bird and now heard no less than four others at various distances. About once a minute we also heard a

rather feeble but abrupt, almost explosive squeak which we attributed to the same bird. For the first time it struck me that this mysterious bird may be the Least Bittern but we have no grounds for anything more than conjecture, as yet. Whatever the creature is he was in unusually full song this evening; the peculiar kik-kik-kik, dee or gee coming incessantly from several places in this marsh as long as we remained within hearing. Besides this cry we heard Marsh Wrens sing occasionally although it was "pitch" dark. Carolina Rails were also singing (ka-e) incessantly from 4 P.M. to 11 P.M. He heard five or six in all.

(He left Wayland for home at 9 A.M. on the 17<sup>th</sup>. Torrey & Faxon walked out, before the train started, to the place where we heard the Kicker last night but all was still there. They describe the meadows as covered with grass and iris but there were no cat-tails.)

1889

June 20

Clear and warm with light S.W. wind.

At 4 P.M. took horse car to Hill-Cedron and with Hunt went over the Country from looking for Cedar Birds' nests. We found some now, indeed, anything except a Thrasher which we did not open although the bird flew from it. Many young birds were out, among them Orioles & Redstarts. Few birds singing in the apple orchard or on French's Hill except Red-eyes and an occasional Robin.

Denton left me at French's Hill and I kept on alone down into the valley to the S.W. and thence up the brook to Hoop Back ridge. In the alder swamp east of this ridge Red-wings were singing about a little strip of meadow. There were also a Cat-bird a Maryland Yellow-throat and several Song Sparrows full song. On the ridge a Grosbeak was singing lustily. A King bird sitting on its nest in the top of a pitch pine. A Pine Warbler singing faintly & briefly. Near the railroad an Indigo Bird saw full song.

Crossing the track & passing through the oak woods I heard nothing but a Wood Pewee until I reached the further woods where the same Crow seen on my last visit again met me and followed me with great clamor. An Indigo Bird singing near the brook, a Grass Finch in the open fields.

Keeping on up the brook I entered the great field to the west. As I crossed it I aroused no less than two pairs each of Bobolinks & Meadow Larks. The former evidently had young, the latter were as shy & reserved as usual. In the scattered fields in this field Wood Pewees & a Pine Sparrow

over singing

arrived about sunset at the cold spring. ▽  
and for nearly an hour afterwards, or until it  
began to grow dark, lay in the grass by its side,  
smoking and listening to the birds. There were  
three different Meadow Larks whistling at times  
and nearly constantly, two. The Bobolinks sang a  
little at sunset but rather listlessly. A Grass Finch  
sat on a stake within 30 yds. of our gaze and  
a delicious serenade singing lots over at times,  
then in full tones. In an opening where the grass  
had been cut a Meadow Lark, evidently a ♀, was  
feeding while her mate sang in the top of  
an elm. It was very pleasant in this great  
bony field <sup>thick</sup> with daisies and buttercups and  
I lingered long and left reluctantly at about 7.45.

1877

June 21

Clear & warm with strong S.W. wind.

So conveyed with Pax in by the 6.15 train. Took my boat at the House and pulled down river to about the middle of the Great Meadows. A few Swallows and one M. T. W. at breakfast singing near the tent. Bobolinks singing rather freely over the meadow. Quail whistling in two places. A Rail (*Carolinensis*) near the middle of the meadow. No Marsh Wrens or Bitterns. No *in* "floaters" in said stream, just below the wooded reach, four Wood Ducks passed, flying up river. They came in from the Great Meadows and dipping down over the trees followed the course of the river up past the tent and out of sight. They flew in pairs but I could not make out their colors.

At about 6.30 P.M. we started up river and rowed without stopping past the town to above the Titbury bridge. In the meadows across the river from the French farm there heard the mysterious kik-kik-kik, cree late in the afternoon.

June 19<sup>th</sup> and the chief object of our visit to it was to make sure that the bird is really settled there and to locate him as accurately as possible before making an attempt on his life with gun and dog, to-morrow.

For nearly an hour, however, we paddled & rowed or floated near the spot without getting the now familiar cry although we imagined that we heard it several times in various directions, but always it turned out to be either imagination or the distant call of a Robin or Red-wing. At length it became time to start back for our train & on

actually got nearly to the railroad bridge when loud and distinct came the singular song we had been listening for from the very spot, as nearly as we could tell, where Fayou heard it on the 19<sup>th</sup>. The bird sang for a six times in succession, then some causes filled with people talking came along and it stopped. We had no time to wait longer so left it for to-night & took the 9.21 train home.

As before stated we saw only a very few swallows below the Manns but above they were numerous most of them White-bellies with broods of young on wing or sitting on telegraph wires. We repeatedly saw the old birds feed the young on wing. There were also a few Fair swallows and a good number of Bank swallows. Probably we saw 40 to 50 swallows in all. There were two pairs of Martins at the houses just below Mr. Samborn's. These I think are the only birds breeding in Concord this year.

At least three different Savannah Sparrows were singing, one at Red Bridge, two near the Hitchcock bridge, two Whippoorwills singing on the hill S. of Dugan Brook meadow. A Wood Duck flying over the maple swamp near the French's landing. A Night Heron speaking but not seen, in the same locality. Wilson's Thrushes singing in this swamp. A Yellow-wing & Savannah Sparrows singing near together at the old sand bank. Several Bobolinks singing in the meadow near this bank. Red-wings singing infrequently. A Cat-bird in full song. No Rails heard about the town.

1889

June 22 Early morning cloudy & misty with occasional light showers. Sun out by 10.30 & remainder of day clear with strong, steady and very refreshing S. W. wind.

To Concord by 9 A. M. train Tapon joining me at Waverley. I had sent my man George on by an earlier train to get "Don" and he met us with the dog at Quincy. Upon reaching Concord we hired Kealey's boat which is kept at the new granite bridge over which we made our start.

On reaching the meadow above the Fitchburg R.R. bridge we put on our wading boots and started in with the dog. The meadow proved an easy one to search for there was little mud or water and but few rocks. Most of the ground was covered with very rather short grass but a bed of canary grass taller than my seat extended along the corner of a brook for 100 yds. or more. We trampled this grass down and the dog crept into every nook & corner of it. Then I hunted him closely over the meadow back and forth. He pointed a nest filled with young Red-wings and rooted out numerous Sparrows, Bobolinks etc. but not a trace of our mysterious singer could either he or we find. After spending fully three hours in the search and going over the ground with the utmost care we left it in disgust and no wiser than when we entered it. If the kik-kik-kik is a bird, which I began to doubt, he is a strangely elusive one.

A Bittern came into this meadow about noon evidently to feed. After alighting we saw him make several short flights from place to place. He

inched up river as far as Sugar Brook but neither  
saw nor heard anything of much interest. The wind  
blew so strongly that few birds sang and it was  
difficult to hear their voices.

He took the 5.25 P.M. train for home.

(Dictated.)

W. Townsend to Ashby, Mass.

1887

June 25

West Townsend to Ashby, Mass. Clear and warm.

In company with Mr. Walter Faxon I took the noon train today for West Townsend which we reached about 2 o'clock P.M. Having two or three hours to wait before the stage started for Ashby, our final destination, we took a short walk outside the village, crossing a pasture and entering a piece of hard woods where we sat down to listen to the birds.

Hearing a Black Throated Blue Warbler singing, we pushed on, and, descending a hill side, found ourselves in a deep retired glen heavily shaded by hemlocks and other trees, and with a dense undergrowth of mountain laurel. In this glen we found the Warbler and had several good views of him. There was also a Wood Thrush here, apparently a female bird with young. Leaving this place, we next entered a grove of large white pine on the slope of a dry hill. Here a Solitary Vireo, and ~~the~~ Black ~~Canadian~~ Warbler were seen. The Warbler was followed about by a single young bird, apparently just from the nest, which it was feeding at intervals. On the outskirts of this wood, in a pasture, we saw a Warbling Vireo in a large ~~chestnut~~ tree, and later, on our return to town, observed two others in elms along the street. Just outside the town a Pine Warbler was singing steadily in an isolated grove of white pines. In the village itself we saw a brood of young Black, and White creepers, chimney swarms were numerous, and were flying about the trees and houses.

At 7 o'clock P.M. we took the stage for Asby, a distance of about four miles. The evening was still and birds were singing freely. We heard several Cat Birds, one Hermit Thrush and one Wood Thrush; the latter singing in an apple orchard, the Hermit in a pasture grown up with young pines. Upon reaching Asby we went to the house of Mr. Brooks where we settled for the remainder of our stay. Two Whipoorwill's were singing a short distance from the house up to the time we went to bed.

1889

June 26

Cloudy with strong wind and light drizzling rain at intervals through the day, the clouds breaking away somewhat late in the afternoon. Starting at 10 o'clock we drove to Mt. Watakie, a distance of about three miles from town, leaving the horse at Woodard's, nearly one third of the way up the mountain. Birds were singing well during the entire distance from town, but we heard nothing of any particular interest. We started up the mountain in a drizzling rain, and dense fog obscuring all except the nearest objects from our view, and, as we were not familiar with the place, interfering seriously with our finding the way. We pushed steadily upward, however, and, after crossing a wide interval of pasture land, entered a tract covered with young spruces growing in thick copses <sup>with</sup> open <sup>detour</sup> ~~ways~~. Here we were delighted to find our first northern birds, Black and Yellow Warblers, numerous, and singing in several directions; Yellow Rumped Warblers <sup>as seen</sup> ~~as seen~~ <sup>as seen</sup> females, apparently, with nests or young somewhere near, and Snow Birds. As we ascended still further the Black and Yellow Warblers became more numerous, and we occasionally heard the song of a Yellow Rumped Warbler. The fog thickened, however, and the rain began to come down more heavily, so we sought the shelter of a large spreading spruce under which we ate our lunch, not knowing in the least how near we were to the top of the mountain.

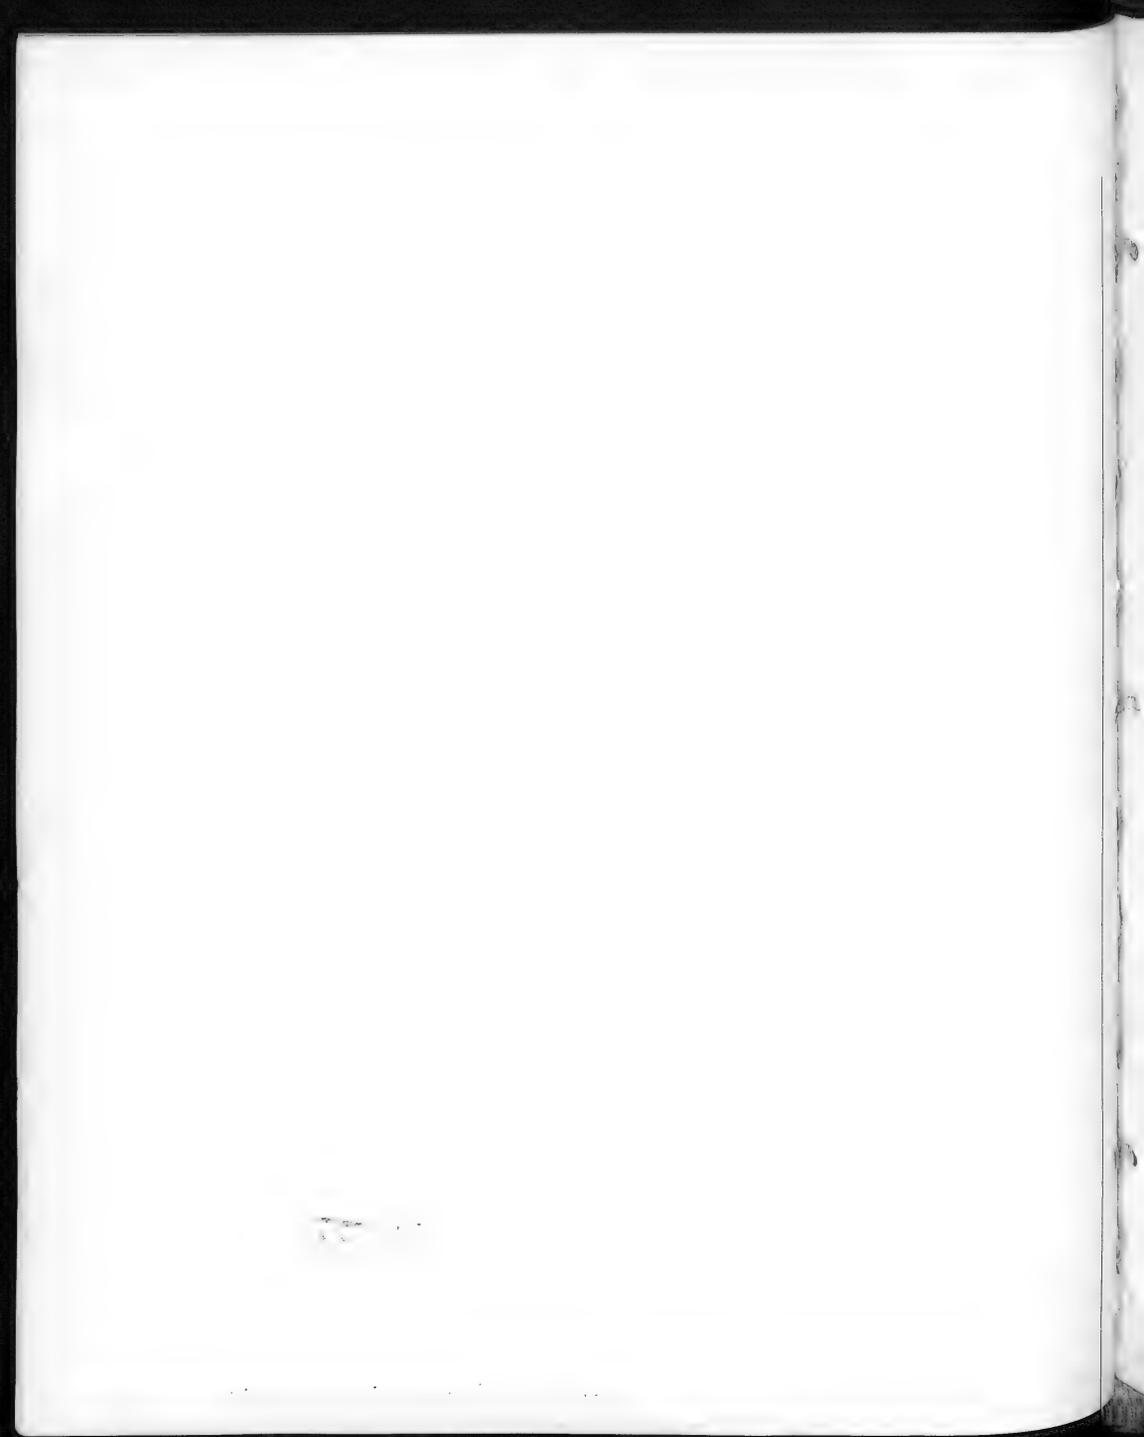

but supposing at <sup>to be still</sup> some distance off. Af-  
ter a while the rain ceased and the fog lifted  
a little, and we started on, keeping along  
the side of the mountain and finally emerging  
on the edge of the <sup>a</sup>sweep, almost precipitous slope  
with ~~some~~ spruces growing densely as  
far down as the eye could reach through the  
mist. We paused here for a few moments, and  
apparently at just the right time, for the fog  
broke away disclosing a fine view of the  
country beneath with ponds sprinkled about in  
every direction, and large tracts of wood dim-  
ly visible as the fog drifted across the land-  
scape. This breaking of the clouds ~~however~~ start-  
ed <sup>up</sup> the birds, which for several minutes sang  
loudly in every direction. We heard here several  
species new to our list, namely, the White Throat-  
ed Sparrow, the Olive Sided Flycatcher, <sup>and</sup> the Rose  
Breasted Grosbeak, besides numerous Hermit Thrushes.

Starting once more upwards, we were sur-  
prised to find that we were within a few rods  
of the summit of the mountain. By the time  
we reached it the mist had entirely disappeared  
and the sun peeped out occasionally for a  
moment or two, giving us a fine view of the  
surrounding region. On the rocky crest of the  
mountain we saw Snow Birds, a ~~or~~ Robin, or two  
and a Phoebe; and several Mountain Butterflies flut-  
tering about among the rocks.

Leaving the summit we retraced our  
steps to the place where we took lunch, and  
then plunged directly down the mountain side

Acety, Massachusetts

1889  
(June 26) through a dense forest composed almost entirely of black spruces some of which attained a height of fifty or sixty feet and a diameter of a foot or more. ~~Black and Blue~~ <sup>Blackburnian</sup> Warblers and Black Throated Green Warblers were numerous in these woods and lower down, on the edge of the deep ravine, we heard a Golden Crested Kinglet singing. Upon following up the song we finally found both him and his mate. They were accompanied by a single young bird only a few days from the nest, which they were feeding. Near this spot in an opening I shot a male Snow Bird. As we were returning to the house where we left the horse, late in the afternoon, we heard a Henslow's Sparrow singing in a little bit of meadow in a pasture on the mountain side, and, going to the spot, flushed the bird several times. It chirped ~~in~~ vigorously and evidently had young somewhere in the neighborhood. The drive home was very delightful, although we were treated to one or two more showers on the way. In the evening after dark we heard another Henslow's Sparrow singing in the meadow near our house.

1887

June 27

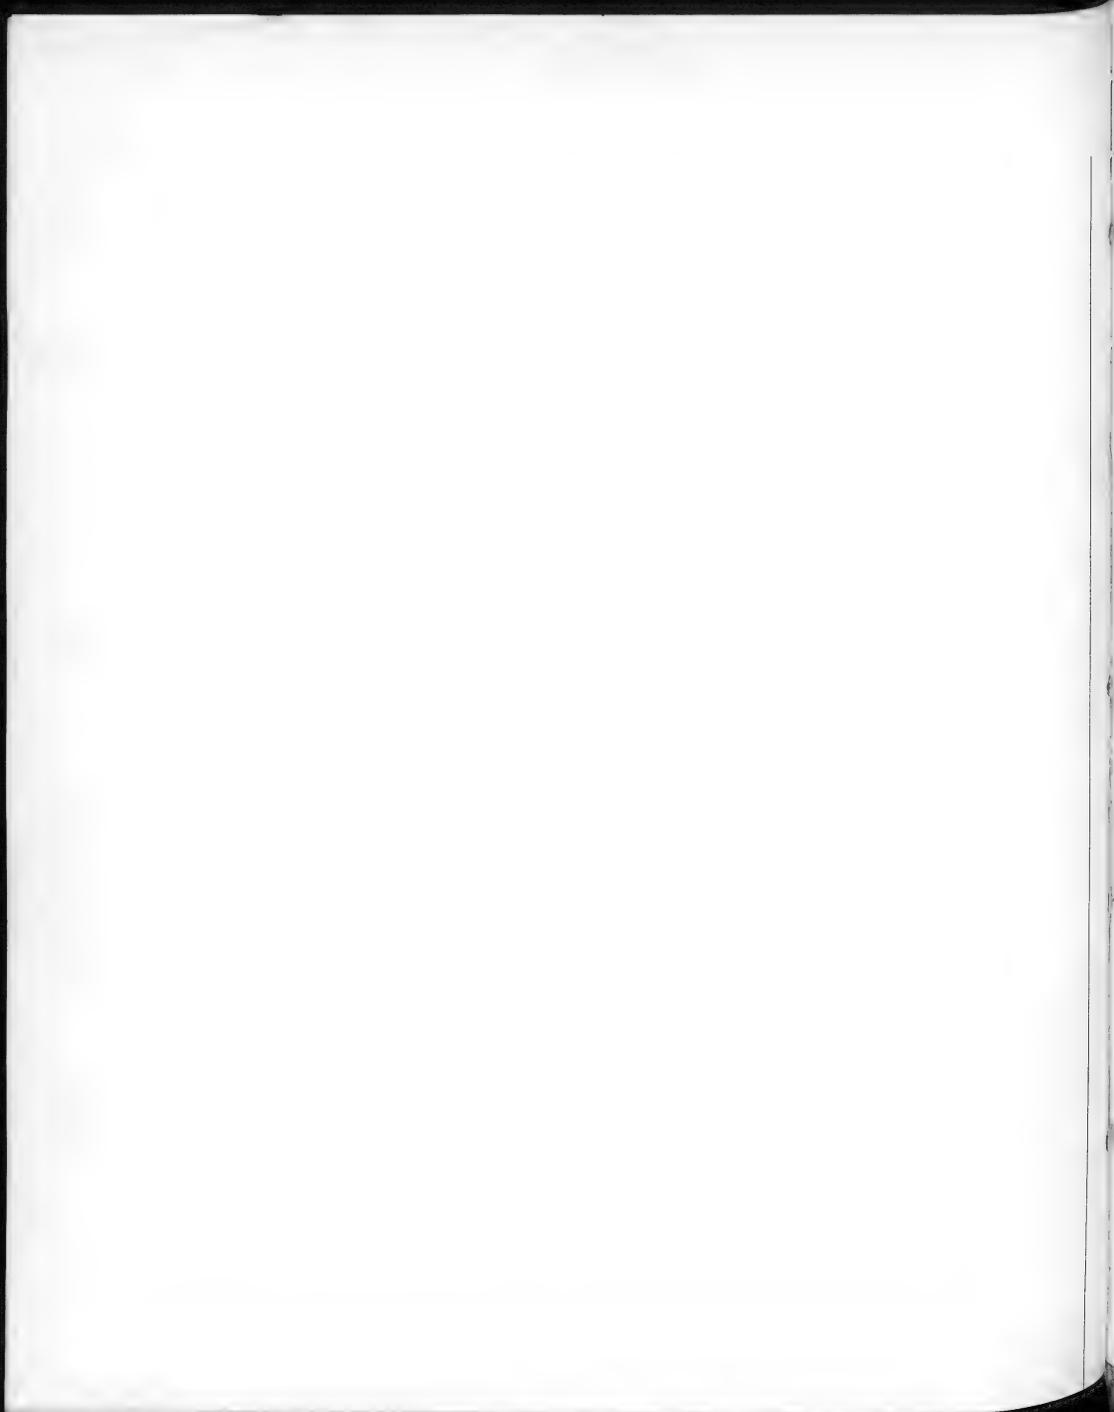

Atkey, New York

Morning cloudy with heavy showers, afternoon clear with driving clouds. We started for Mt. Katic at 11 o'clock in the forenoon. Reaching Woodard's we again put up our horse there, and took lunch behind the house. Faxon then started down into the valley to the south at the base of the mountain where, as afterwards learned, he found Kinglets, Blackburnian Warblers and Black and Yellow Warblers singing in a spruce swamp. He then skirted the mountain on the south-west side, meeting me late in the afternoon on the western side. My route was up through the open pastures into the spruce pastures where I found, in addition to the birds observed yesterday, a Red Heronbill. I then kept on into the heavy spruce forest where we heard the Kinglets singing yesterday, and continued around the mountain side to find that this tract of heavy timber extended for five or six hundred yards. The trees were mainly black spruces with a great many hemlocks and a few balsams. There were also scattered ashes, red maples, mountain maples, red oaks, yellow, and paper birches, and a few straggling and stunted white pines. The mountain side was very steep and rocky, the ground covered with moss and the rocks ~~covered~~ with moss and rocky ferns. The spruces varied from thirty to seventy-five feet in height and were slender, well-proportioned trees, growing thickly together. Some of the larger ones

were nearly two feet in diameter. Woodans told us that both porcupines and white hares were ~~not~~ numerous in these woods. I saw many orange colored Salamanders, similar to those which are so numerous on Mount Inez, etc. Of birds, the characteristic species inhabiting these forest were Ruffed Grouse, Pileated Woodpeckers, Winter Wren, Blackburnian Warblers, Black Throated Green Warbler, Golden Crested Kinglets, Hermit Thrushes, Snow Birds, and Queen Birds. Of the Pileated Woodpecker we saw no birds, but their recent presence was attested by their numerous characteristic mortise-shaped holes in the trunks of the dead stumps. Some of these holes had been made so recently that the wood was quite new and fresh. There seemed to be only one Winter Wren on the mountain, or at least only one male. I heard him sing twice, once rather indistinctly, in ~~the~~ <sup>a</sup> ravine, the second time near at hand and very loudly. The Blackburnian Warblers were exceedingly numerous, almost so much so in fact as the Black Throated Greens. Both were in full song, and Kinglets also abundant, ~~and~~ <sup>were</sup> singing freely. We heard a single White Throated Sparrow, probably the same bird noted yesterday.

After Paxon met me we returned to the spruce pastures where we spent half an hour or more. These pastures are covered with black spruce, and balsams (the latter ~~is~~ <sup>is</sup> common) trees from ten to twenty feet high, growing thickly with little openings,

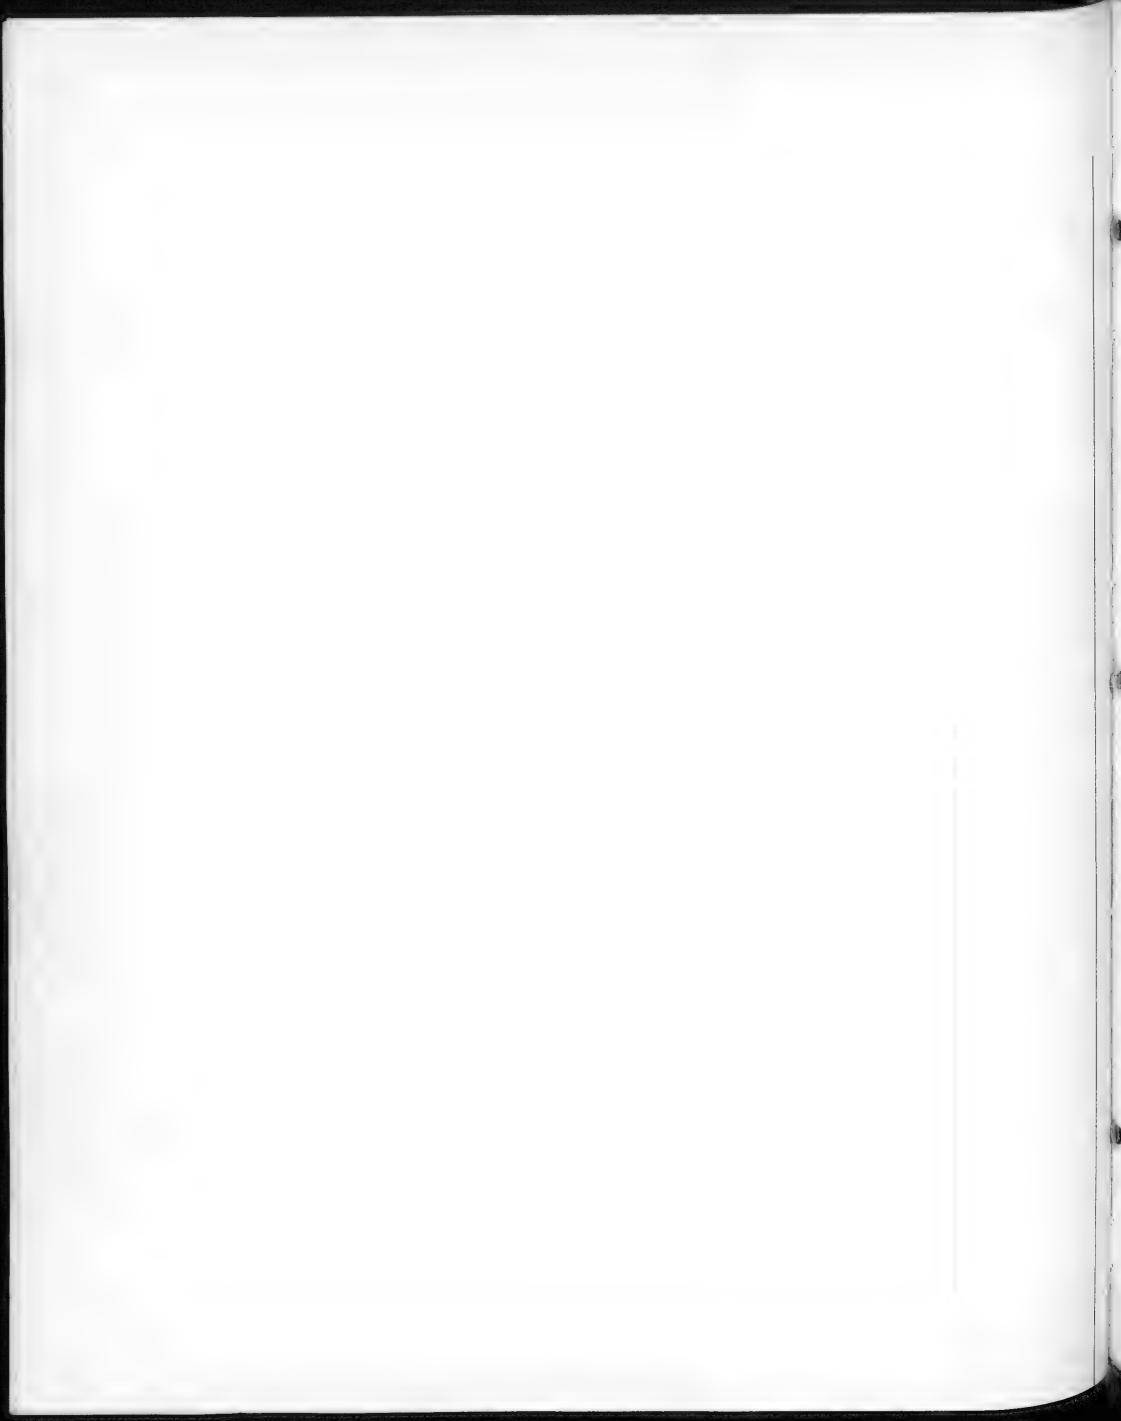

accompanying at least one of the red itls, ...  
... cocoon ...  
... pupa ...  
... distribute them among several  
of the young.

The nesting time was again we drove about  
half a mile further to the west side of the  
... and leaving the buggy in a shed  
spent an hour or two in and near an ex-  
tensive spruce and larch swamp, as well as  
in a juniper pasture which skirted the base  
of the mountain. The swamp comprised  
probably twenty acres. It was covered with  
a mixture of spruces, balsams, and red mea-  
ples, many of which were rather thickly  
growing with *lusnea* moss. There was a dense  
undergrowth of mountain laurel, alders, hoi-  
dog wood and so forth. The ground was  
<sup>wet</sup> and carpeted everywhere with sphagnum.  
In this swamp we heard, at least five Blue  
-backed Warblers, and about four  
Cerulean Warblers, the only birds of either spe-  
cies which we detected anywhere in the  
region about Ashby. The mountain laurel was  
in full bloom although past its prime. In  
addition to the trees just mentioned there  
were a great many larches and some fine  
large white and yellow birches. In this  
swamp we also heard Kinglets, two Red bell  
Red and White, and one Black and Yellow  
Warbler. In the bordering pasture ~~...~~

1889

June 29

Car and foot with light south west wind. Spent the morning at the house. Starting soon after dinner we crossed several fields to the south west, visiting on the way the mud den where we heard the first cry of crow. Arriving at night the ground to be taken out and was overgrown to low bushes, mostly blueberry and holly. We explored it better thoroughly but failed to find the Sparrow. Descending a slope and passing through a belt of grass, birches and red pine to a piece of water tall oaks border the swamp. Here we spent an hour or more. In the swamp we heard a Wilson's Thrush, a Hood Thrush and quite a number of brown Thrushes. A Red-eyed Vireo was seen in the oaks. Skirting the swamp we crossed the brook which flowed to the north. A narrow, heavily-shaded glen, and climbed steep hill on the further side. Entering a road path we next passed through a mixed woods of oak and pine and <sup>came out</sup> ~~went~~ into a clearing grown up to wild red cherries and raspberry bushes. The ground was covered with old logs and was just the place for Worming Warblers and Blue-sided Flycatcher, none of which, however, we succeeded in detecting there. Hermit Thrushes were ~~seen~~ singing all around this opening, at least three or four of them. On a grove of fine old white pines at its southern extremity we heard a Red-bellied But Hatch and two

Blackburnian Warblers. A Black Throated Blue Warbler, the only one detected near Sahy was singing in ~~the~~ a swamp ~~with~~ ~~the~~ abundance of mountain laurel.

He left me here and attempted to here to cross this swamp,

It was difficult that he <sup>only</sup> crossed one end of it, and, me.g., into a road beyond, he had the chance nearly as soon as I did. I went back over the same ground he had just seen me walk over, crossing the brook, however, a little ~~to~~ down. I saw Green Herons flying up this brook at 4, 5, 6, 7.

In evening the House Sparrow was singing in the meadow near the house

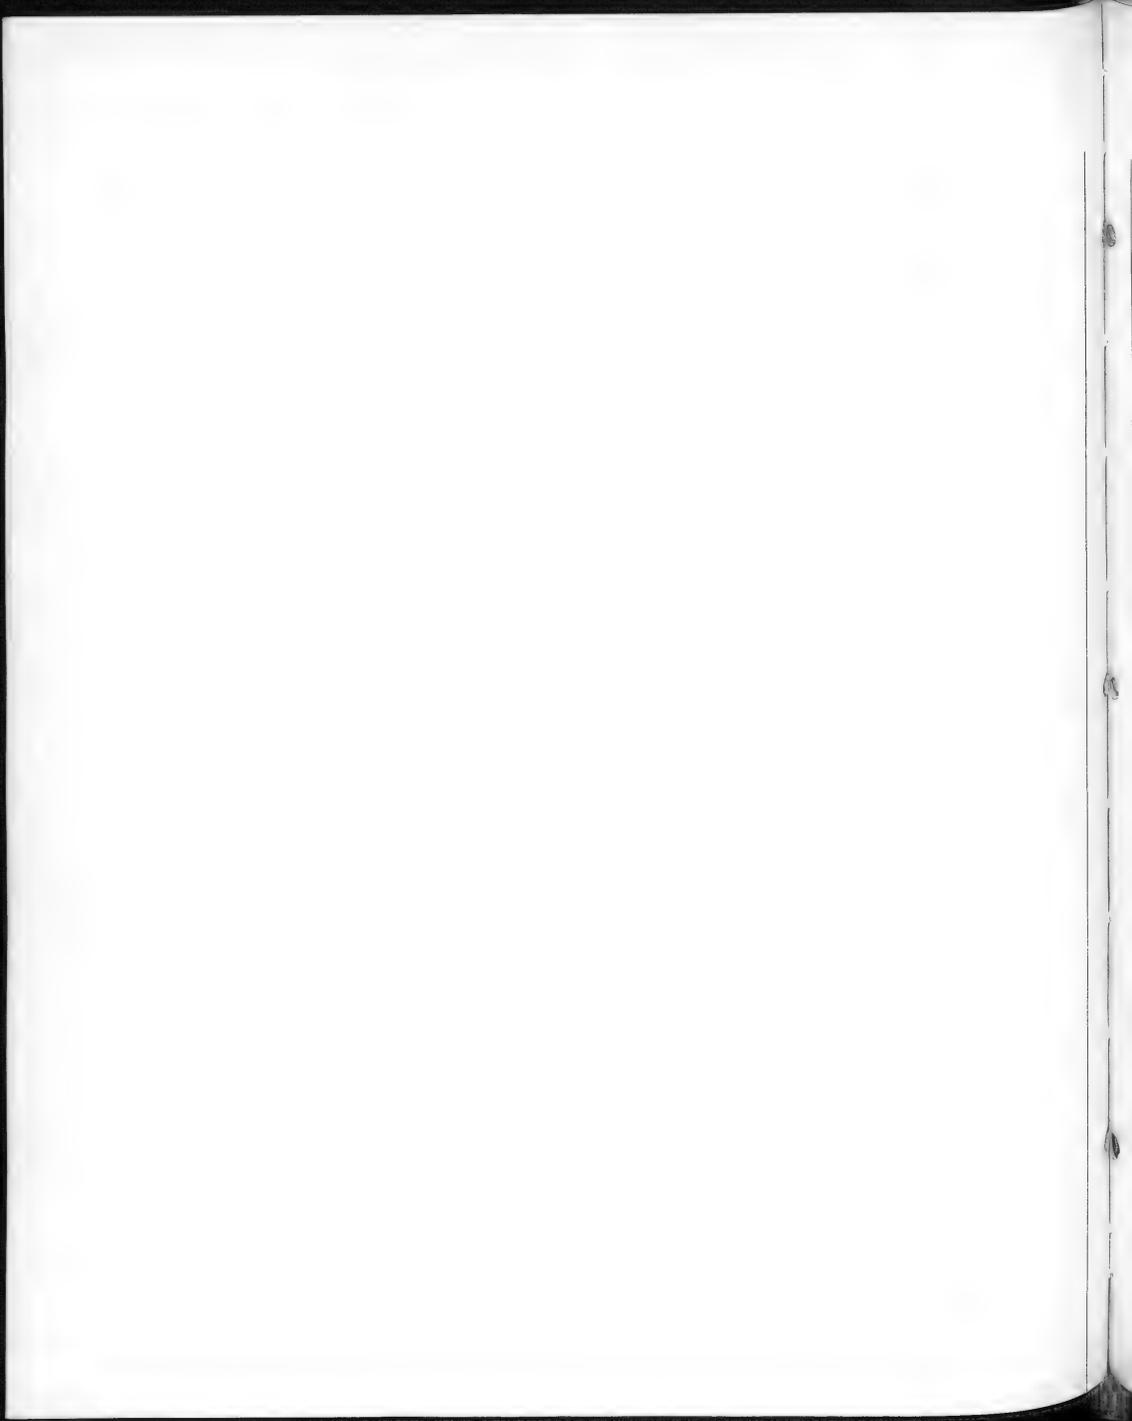

have taken the <sup>parture</sup> ~~parture~~ called a very peculiar song  
I have recorded at length in my notes  
specimens. It heard nothing of the  
mountain side which  
we had not ~~before~~ <sup>before</sup> this locality before.  
are singing rather freely late in the  
The day has seen the usual water.

Ashby to Fitchburg, Mass.

1889

July 1

Clear and very hot. Got up at eleven o'clock  
drove to Fitchburg where I took the train for New  
Hampshire. On the way to Fitchburg we  
saw a lot of people on the road side  
singing by the roadside about three o'clock  
of the day. They were in deep, damp mud and  
a lot of people were singing and a great  
number of people were singing and  
the people were singing.

1889

July 7

Morning clear. Clear moon & one, clearing at sunset. Evening clear with pale moonlight. Warm and sultry with light S. W. wind.

To the swamps with Purdie this evening taking the 5:30 train to Hills Crossing and returning by carriage some seven Brook at 8:30 P.M. Boat over the usual ground walking down the Mass. Central track to the willow hedge where we spent an hour or more, thence at sunset to the Port Pond swamp where we remained until past eight o'clock.

There has been a great change in both vegetation & bird life since I last visited this swamp June 14. Today we found *Asplenium*, light shade, *Asplenium trichomanes*, and young primrose in full bloom. The seed brown heads of the cat-tail grass are of nearly full size and very prominent contrasting with the sea of waving green bladder-like leaves. Both species growing side by side in places the narrow leaved, dark green, the broad leaved a pale more glaucous green.

Song Sparrows and Swamp Sparrows were singing incessantly in every direction when we first entered the meadows, in fact much more vigorously than in early June, but until after sunset we heard nothing else except <sup>a few Maryland Yellowthroats and</sup> an occasional Cuckoo or Yellow Warbler were still more rarely a Red-wing. The latter were seen in numbers, however, in small flocks composed largely of chattering young flying from place to place in the great meadows. A little before sunset Robins began singing and continued until nearly dark. We also noted a considerable flight going on in the swamp at Port Pond. Not a single Marsh Wren

was seen or heard in the Beech Island meadow but two ♂♂ sang a few times after sunset in the cat-tails just north of Port Pond, a locality where <sup>were</sup> ~~there~~ certainly none in June.

At Port Pond we heard a Wilson's Thrush sing twice and a Cat-bird singing rather continuously. Saw no Herons until nearly dark when three Green Herons flew in line from the Port Pond swamp taking the usual course towards Beech Island meadow, two afterwards returning. A little later than Slight Herons also left this swamp yawning loudly. They must have roosted here through the day. We heard none in the direction of Beech Island swamp, but saw a single adult bird flying from that place at about 6 P.M.

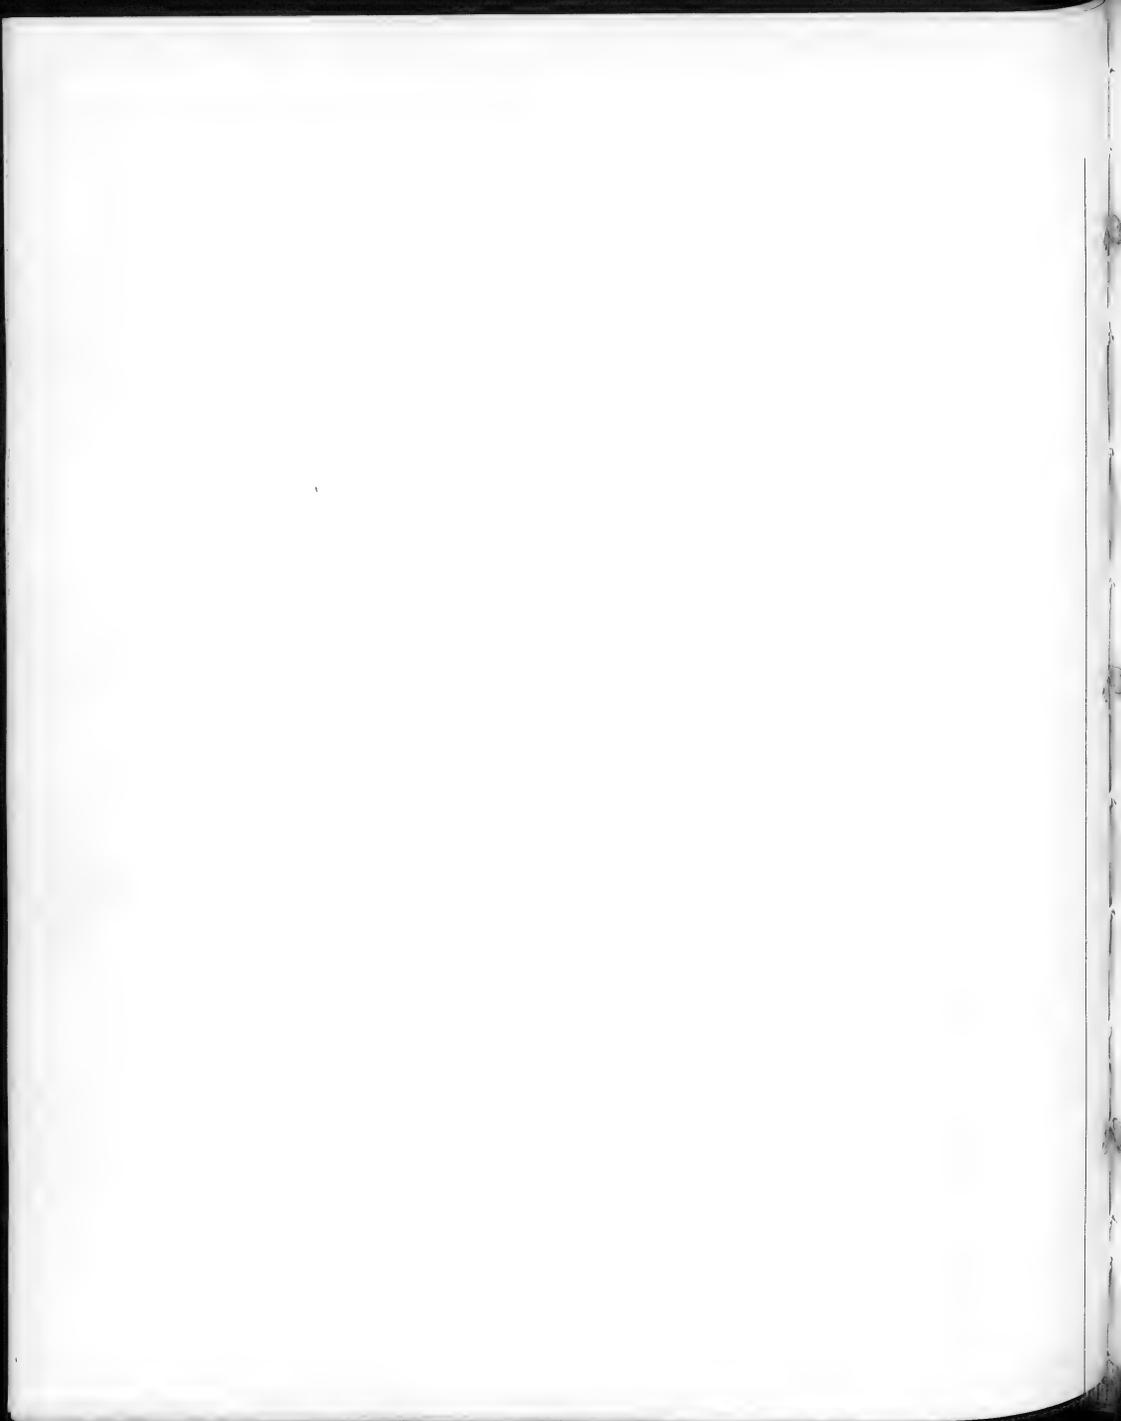

Although the evening was remarkably favorable for hearing slight sounds we listened in vain for the faintest Rail note until nearly dark when a Carolina Rail called ka-c twice in the flags near Port Pond. This was literally the only Rail heard. It is wise to say that their singing is over for this year.

Twice during the evening I imagined that I heard the kik-kik-kik, cree of our "mystery" but I was perhaps mistaken. Certainly this bird, also, has practically stopped singing.

As it was getting dark a solitary Sandpiper rose from the Port Pond bog within 30 yds. of us and wheeling overhead made off to the E. finally pitching down with wings closed. Its erratic duck-like flight & characteristic peet-wet call were both unmistakable. I do not remember to have ever seen it here so early before.

Bull frogs, green frogs and toads all in full song this evening. A Cuckoo coming at intervals before sunset.

(Sept. 15) I was not prepared and did not fire.

Cambridge, Me.  
from the Mill  
in the 17<sup>th</sup> of

We landed for lunch about two miles below the mill. I took a short walk back into the woods following a good wood path, that led up over a mossy hill. I was flushed a grouse in a windfall. The bird was shot by me within ten yards. I shot at it for some time as it was flying and it went down but when I was down in front of it it rose again and went into a tree. I then shot it falling.

a bird.

Starting on we paddled the remainder of the distance to the falls. The river was low and we had to go by the rocks and some of the shallower places. Started a few Blue Herons coming suddenly on him. When I was near I passed a very large white heron and a few. Saw several *Sphyrapicus varius*, at one place three together. " *hudsonius* numerous. Saw a flock of seven White-winged Crossbills. No Woodpeckers except one Downy & several *Colaptes*. Deer tracks on the sand bar at the falls. No Swamp Sparrows.

heron

*hudsonius*

1889

Sept 16

Clear and warm with light S. E. wind.

Heat 87.00.

To the Outlet by steam with Spelman taking James Burrier, Will Sargent W. S. Sargent and Chas. Hillsoll the guides who went to get our camping ground in Camp 1100 order. Banded at the first point south of Moll's Rock and the men Moll's Rock at once went to work to clear a place for the tents while S. & I sat on a log and directed operations. It was very pleasant, the sunlight streaming down through the foliage a Kingfisher rattling on the lake shore, Titmice and Warblers chirping in the woods.

After eating lunch we started for the Outlet where we beat the marshes for about two hours without seeing a single game bird of any kind. I started several Swamps and Savanna Sparrows as well as three Titlarks.

We then started for Lakeside, Spelman rowing. On the way we saw nothing whatever of any interest. Reached Lakeside about 5 P.M. and kept on into the lower pond at the mouth of the Cambridge. On the north shore of this pond is a little muddy cove where we have seen a flock of Wood Ducks on several occasions lately. They proved to be there this evening and I stalked them successfully after waiting some time for a drake, which sat perched on a log, probably as a sentinel, to join the others which were swimming close in to the grass. Getting them together I fired killing them all and dropping a fourth with the other barrel as the survivors rose. This was my first fair shot at Ducks with the new 20 g. gun. There were about twelve birds in this flock.

While here I heard a White-throated Sparrow sing and what surprised me considerably the full flight song of an Oven-bird. This was after sunset the evening cloudy and warm. Swamp Sparrows were about, but broken feeble tone.

Sept. 18

Cloudy with occasional light showers. Warm. wind S. S. to S. W.

I go into  
Camp near  
Moose Rock  
with  
Spelman &  
Charlbourne

Chadbourne wind last night and with Spelman and him I started by steamer for our camp this morning. On the way up the falls saw five Sheldrakes and three Winter's near Bear Island. Also a few Loons and a Loon or two.

Upon reaching camp Sargent told me that he had seen Canada Geese fly up the falls towards Moon Point late yesterday afternoon the weather thick & raining at the time. They flew close to the surface of the water in a line.

Outlet  
marshes.

We spent most of the day getting our things arranged I skinned two of the Wood Ducks shot on the 16<sup>th</sup>.

Greater  
Loons

Later in the afternoon we started for the Outlet, C. & S. Both in one of the boats, I in the little Red Roy. At the Outlet found three Winter's Yellow legs at which C. & S. Both fired as they flew past. They alighted on the beach well up towards Moon Point. I went in pursuit. On the way came upon a flock of five Summits & one Sandling feeding on the beach. Shot the Sandling & one Summit which "got in the way" the Yellow legs proved shy and flew over across the river.

Sandling

Moose Pt.

We then went to Moon Point where I found the Thrusters. C. & S. shortly afterwards joined us. They had beaten a portion of the marsh and killed one snipe & made some noise. While we were talking a flock

Wood Ducks

of twelve Wood Ducks circled over the marsh & alighted in an open pond hole.

Greater  
Yellowlegs

I then left the others and paddled through Richardson's Crag starting a snipe from the mud. Found the three Yellow-legs on the marsh and paddling to within about 60 yds. got all three together and to my great surprise killed them all with one shot from the choked barrel of the little 20 gauge.

As I sailed out of the river after dark I heard snipe somewhere on every side. Also heard what I took to be an Upland Plover.

1889

Sept. 19

Cloudy with pouring rain all day, Wind varying to every point.

Out in the afternoon Jim rowed us over to the Outlet. Seven winter and two Summer Yellowlegs on the marsh. Paddled within some range then backed out and tried to get nearer but they flew. I fired at about 60 yds. without effect. Then the flock turned and came back over us when I killed one with my left barrel. It scaled 100 yards or more and fell well out in the lake. A Herring Gull descended to it and apparently tried to pick it up.

Outlet marsh  
Winter & Summer  
Yellow-legs.

Herring Gull

The report of the gun started up some Sandpeeps & other Grass Birds. I shot two of the latter, one flying. I also shot a Carolina Rail which fell wounded into the lake and dove as adroitly as a Duck using its wings when swimming under water.

Sandpeeps  
Grass birds  
Carolina rail

We next went to Moon Point which proved a blank. Then through Leonard's Pond where we started twelve Hood Ducks and a Solitary Sandpiper. Seven Black Ducks came in and circled around but did not alight.

Leonard's Pond  
Hood ducks

Returning to the Outlet we flushed a pair of Ring necked Duck, a Black headed Grebe & gray heron. I saw the gray speculum distinctly as they went off. I could have shot them easily had I been in the bows but Jim was rowing at the time. It poured in torrents all the time we were out. The lake has risen nearly two feet and the swamp grounds are flooded and ruined for the present.

Ring necked  
Grebes.

20

Cloudy with occasional gleams of sunshine. Wind strong from S. W. & E.

At the Outlet in morning. Shortly after breakfast. Heard a *Singa maculata* & shot a *Colaptes auratus maculosa* under water.

At Moon Point at evening. Arrived too late & got into a bad position. A pair & three flocks of Black Ducks came in, about 75 birds in all. Did not get a shot. Heard a Solitary & three Great Blue Herons. A Carolina Rail diving about in the twilight.

Moon Point  
Black Ducks

1889

Sept 21 Cloudy with frequent heavy showers. Wind N.W.

Spelman and Chalbourne spent the day shooting going to Sunday  
Black Ducks Cove and Rapid River. They saw a flock of fully 150 Black Ducks  
Wood " in Brandy Belp Cove and some Wood Ducks in Rapid River  
They killed nothing but a Carolina Rail.

Moon's cove Late in the afternoon Jim rowed me to Moon Point  
I took a station on the east bank and after waiting  
Black Duck for some time got a long shot at a Black Duck which  
after flying about 100 yards dropped dead. He went after  
him when swarms of Black Ducks began coming in from  
every direction. Within ten minutes fully 150 must  
have arrived. Nearly all of them sealed down and  
alighted in the flooded meadow. He paddled to the  
nearest flock and as they rose I fired at one missing  
it but the next moment killing another very dead with  
the second barrel. This was my first Black Duck  
shooting with the new 20 gauge. All the Ducks went  
out of the marsh at their shots. Besides the Black  
Wood " cove Ducks I saw four Wood Ducks come in on a drake  
in apparently full plumage.

22 Clearing with alternately showers and sunshine. Wind blowing  
a raging gale from the N.W. very cold water freezes at night  
Started shooting at about 8 A.M. Went first to Moon Point  
where we paddled over the flooded meadow starting two  
Carolina Rails but nothing else. Will Burgess who was with  
Spelman killed a fine Greater Yellow Leg which was sitting  
on a isolated mud lump.

Wood Ducks Kept through Leonard's Pond. In the channel north of  
the island found a flock of over 20 Wood Ducks, most of  
them in or near the old fir tops. I was about to land  
and stalk them when I saw a man emerge from the bushes

1889

Lake Umbagog, Maine.

(Sept. 22) and after looking towards the Ducks entire again. He afterwards proved to be merely a river driver of one log but he spoiled my chance for I at once decided to paddle to the is. As we approached a fine Drake, in perfect plumage apparently, sailed out into the open water & stretched up his neck. When we were within about 60 yds. he started & all the others rose also. I fired into the thick of them at about 80 yds. but failed to stop any. One turned back & passed at about 50 yds. My first barrel produced no effect but the second hit her so hard that she came nearly to the water but finally managed to rise enough to disappear among the trees.

Went to Sweet Meadow. About 75 Black Ducks there. I tried to start them but the water was very high & they kept well out feeding among the tops of the submerged sedgs. At one time the whole flock was within 100 yds. of me. They were very playful lashing the water with their wings & sometimes diving both from on wing & while swimming. A fine adult Greater Scaup Duck alighted with them in the open water. I finally shot at two that came within about 80 yds. but only wounded one slightly. Five then came down with the boat. The Ducks began to return within five minutes. We paddled to town that alighted in the grass but they rose at fully 40 yds. I missed with my first but brought one down dead with the second barrel at about 80 yds. Used the 20 gauge to-day.

As five came down the pond he passed within 20 yds. of two Red Phalaropes. After the Ducks had gone we went after the Phalaropes and I shot one on the water and the other as it rose. They were just outside the grass in the open water. They occasionally turned over on their sides like Billie Greys.

A Marsh Hawk came through the meadow

Sweet Meadow

Black Ducks diving

Greater Scaup

Red Phalarope

1897

Sept. 23

Bear and cold with high N.W. wind which died away at sunset.

H. W. Henshaw arrived on the steamer this morning and spent the day in camp. Late in the afternoon he took the steamer back to Lakeside and I accompanied him. Alva

Blue-wing

Teal

Coolidge on the boat. He tells me he saw a flock of eighteen blue-winged teal in Ketalwa Pond on the 18<sup>th</sup>. None have been reported at Mumbajo this year. He also tells me that he has seen Woodcock on the Lipsythe carry and at N. Parumashume

Woodcock

Butter-bird

Coots

Just below Great Island we sighted a flock of seven American Scoters. Alva offered me a little cedar canoe he had with him and in it Jim and I at once started after the birds which proved very wild. By chasing them about for an hour or more and firing ten or a dozen long shots at them however I managed to get two. Had the little 20, avg.

" 24

Clear, still and warm. A superb day. The foliage turning. 1 O. T. B. and 6 O. S. came up on the steamer with me this morning and spent the day at camp. No shooting, of course. The usual small birds about the camp.

After the steamer had departed for Lakeside with the ladies in the afternoon I started on Moon Point with Holman.

Red Phalarope

In the flooded meadows near the Shell I found a bit of a game. A straggling dead dove it was by the way a white eye. It did not feel pure it was a Red neck. I was within my gun. It had been shot in the site and was only a few hours dead.

Moose Pt.

Wood Ducks

A few ducks came out this morning but we got no shot. Two Wood Ducks passed near Holman but he did not see them until too late to shoot. Although the water was two to three feet deep all over the marsh we heard many Carolina Rails calling kip, kee at sunset.

Sora Rails

1884

Sept. 25

Cloudless, the air clear as crystal, the mountains visible by daylight. A light east wind all day.

Breakfast at 6.30 and I at 7 for the Megalloway, so we passed through Moll's Carry the fog began to take on a very thick and before we had made a mile ~~up~~ the Megalloway it was rent by the combined influence of the sun's rays and the rising breeze, drifting away in fleecy masses over the woods and disclosing a scene of surpassing beauty.

We paddled through Horse-shoe Pond without finding any birds then crossed the river to Pine Hill Pond where I discovered five Hooded Ducks sitting on a log, sunning. Wishing I could to the water's edge but found the distance too great for a good shot.

I then returned to the river, landed above and made a second stalk coming out within about 40 yds. Only one remained on the log. The other four were scattered about swimming & feeding. Finally they dove in together & I fired stopping three with the first barrel and the fourth as it rose. Two took to the grass etc. Don't speedily found them. I photographed two of them on the log propping them up with sticks.

Next stop at Pulpit Rock Pond. Three Hooded Mergansers, two Hood Ducks and four Black Ducks in this pond. Stalked the Mergansers and fired one barrel stopping two. Saw the Black Ducks coming straight for us and getting in a fresh shell made a clean double as they passed within about 40 yds.

One of my Mergansers escaped by diving although at one time I could hear. Not him early enough.

On going back to the boat came on a flock of six Grouse & shot one with the 20 ga. I afterwards followed them up and killed four more, one on the west bank of the river. A little above this pond flushed a Hooded Merganser as we rounded a bend and dropped it with the 20 gauge. It dove at once and escaped. When

less than  
a minute

near Bottle Brook heard a bird call repeatedly on the  
water. I took it for a Wood Duck. Jim said it  
was a Partridge. He was doubtless right for on paddling  
to the spot I discovered a Grouse sitting on a log & shot  
it. At the report of the gun several others rose & alighted  
in the trees & bushes. I shot both barrels of both guns in  
rapid succession then reloaded and fired two more shots  
killing six birds in almost as many seconds. I saw only  
one that none escaped.

Bottle Brook  
Pond.

Reaching Bottle Brook Pond we landed and lunched. Then  
I crept in to the lower cove. A single Merganser then  
left unharmed. On the point passed within a few yards  
of the Grouse, in the second cove discovered a Wood Duck  
Wood Ducks asleep on the end of dead prong at least ten feet above the  
water, a shapeless mass with head buried under feathers of back.  
Two others similarly enjoying themselves lower down on the  
same branch. Got within 20 yds. but could not get two  
together so retraced and attempted to approach from a different  
direction, when a flock of about a dozen heard or saw me &  
started arousing the sleepers & coveys. I fired one barrel  
at long range dropping a bird with a broken wing. It at  
once went ashore on the other side of the cove. I then returned  
to where I left the Grouse and easily found & killed them  
both. Upon reaching the place where the Wood Duck landed Tom  
took her track & followed it across a ridge to a hollow where  
there was a pond of rain water. He saw grouse on its edge  
he found and pounded his bird but she eluded his opening  
and flopped off over the water diving near the middle of the  
pond. I did not see her again nor could the dog think any  
secret about the pond. I waded all over it but could not find  
her clinging to the bottom. Where she went is a mystery. Shot  
a single Black Duck and two Grouse a flock in the third cove all killing  
coming through Moll's Cove in the twilight first at a short cove? Best killing  
at sunset?

1887

Lake Umbagog, Maine.

Sept. 26

day with frequent heavy showers. A dark, dismal day.  
 F. B. & E. K. S. came up on the steamer this morning on their way home via Errol & Colebrook. I joined them off the camp and went with them to Errol. As the steamer passed Moll's Carry I saw a fine ad. of Duck Hawk sitting on the top of a Duck Hawk stub. It flew at fully 200 yds. and skinned off over the water.

At Errol Jim was waiting with my boat & Don. After putting the ladies in the stage we started back. In Mile Meadows a flock of twelve Wood Ducks alighted in the grass. Jim paddled me within good range and I shot two on the water & a third as it rose. Jim took to shore where Don found it.

Went to the head of Curtis Meadow. About 75 Black Ducks there but the water was so high that we could get no cover in which to approach them. When the brook comes in at the extreme head of this meadow we detected the Wood Ducks. They came back over us and I made a clean double killing both birds dead. A moment later another bird came down giving me an equally good shot which I missed. Reached camp in a pouring rain at about 2 P.M.

Helman & Chaddock went up the Megalloway & spent the entire day there. In Bear Brook Chaddock killed two fine adult ♂ Wood Ducks at one shot. There were four of them with about a dozen females and young birds. Of the latter he got one. Will sayent shot a fox in Kelpit Rock pond when it trotted out of the grass within a few rods of the

27

... the animal is a brown. Spent the entire day in camp skinning birds. Helman went to Black Island cove where he saw about 30 Black D

Windy with a few streams of sunshine and occasional showers  
; was a rare day with high N.W. wind

Trip up started for the Megalloway at 7 A.M. Spelman & Dargy  
Megalloway R. accompanying us. Just above the mouth of the Megalloway  
Canada Jays saw three Canada Jays. A little higher up Jim discovered  
Parkies three grouse on the west bank. I shot two of them but  
the third "trud" & then flew before I could get a shot  
at him.

Both Brook I had no more shots until reaching Both Brook Pond  
Pond Creeping in to the lower cove I found a large flock of  
Black Ducks Black Ducks there. After lying in wait for fully an hour  
Shooting. I finally saw them coming decidedly towards my ambush.  
They swam to within twenty yards of me when I fired  
the first barrel into a perfect mass of them and cut  
down a single bird with the second as they swam.  
To my amazement and disgust not a single Duck  
remained on the water when I fired the first shot  
although there were many feathers. Probably most of them  
had their heads under water when I fired. I could  
not see distinctly through the thick bush in front of me.

In a few minutes a large flock of Black Ducks returned &  
fed down towards and past me. I tried to stalk them  
but Spelman who had arrived in the mean time showed  
himself & scared them. Afterwards I ambushed the  
same flock in the upper cove. They swam past my stand  
within ten yards, bunching beautifully but I wanted the  
Mallard Mallard which kept apart. Finally I killed him & a Black  
Duck at one shot my second barrel missing. Several  
Mergansers & one Whistler were with the flock.

Bear Brook. On our return we paddled up Bear Brook 1/2 mile or more  
Wood Ducks Got two Wood Ducks on the water. One had a broken wing. The  
Black " one return fired at 4 Black Ducks at 40 yds. & stopped here.  
Don found "rice" in alders on shore. Used the 20 gauge entirely to day

Sept. 27

... with ...  
 In camp all day skinning birds. Five shot two Grouse Partridges near the camp and I a third which came within nest our birds. I saw one first but which I followed nearly near camp. I went back into the woods finally killed him on a shady point. He was squatting on a bed of green moss under large hemlocks. I saw his glinting eye first, then made out his head and finally the whole bird.

The Moys party, who arrived last night saw a large flock of Scoters in the lake this morning. Scoters in the lake

30

Cloudy threatening rain which came at sunset and lasted all night.

I B. Pond this morning with Chadbourne him & Will Sargent. Near the Steamer Landing C. shot five Grouse. I got two on the way to the pond one of which was sitting in a corner of an old log camp the roof of which had fallen in.

Trip to B Pond.

Partridge in a logging camp.

We expected Whitney to meet us at the pond with a boat but he was not there. Accordingly we had to embark on two rafts which we were lucky enough to find. The wind soon after we started & the trout stopped rising. He fished about three hours getting a small trout, I nothing. Saw a Loon and two Scoters in the pond. A Barred Owl began hooting at about 5 P.M. and continued at intervals until we went to sleep. He spent the night in a comfortable little bark shanty on the island. White-winged Crossbills chattering near the lumber camp. Five Sitta carolinensis there. Also many sparrows.

Trout fishing B Pond.

Scoters in B Pond Band Owl

Loon in Sitta carolinensis

1  
I was then all day up to 3 P.M. when suddenly the clouds broke away and the sun streamed on a few superb rainbows or rather two rainbows with their bows together but arches extending in opposite directions thus: (V).

Left B. Point at 8 A.M. in a pouring rain. Crossing the lake to the Oxford Club house I saw only a few Sparrows & Olive backed Thrushes. Chalbourne killed a Grouse & after a while two more on Rapid River Camp. Near Oxford Club I saw a mixed flock of fully 100 birds.

Big flock  
of  
Golden Crests  
other birds

They seemed to be mostly Kinglets (*R. satrapa*) with a few Chickadees, Myrtle Warblers & Horned Larks. This I went down to Lake side for the night with Chalbourne who starts for home to-morrow.

2  
Cloudy with frequent light showers. Wind strong from the N.W. A raw disagreeable day.

Summer Yellow-leg

Jim arrived at about 8 A.M. with a Summer Yellow-leg which he shot near the Lake House. He started up the lake at eleven hunting the Great Cove carefully on the way. Near the pine island three Black Ducks jumped and I made a clean double getting both birds. This was the only shot that I find all day.

Black Duck shooting.

We saw two more Black Ducks and two Whistlers in the Great Cove an enormous Sheldrake near the narrows and about thirty Black Duck in Black Island Cove. The latter we came very near getting shots at but once we showed them the boat before we were quite in range & again turned the boat & paddled out of a little more when if we had gone ten yards further in we should have had a good shot

1887

Wagon, Maine.

... in getting a ... of the day.

... in ... for breakfast we started ... they spread out so that the outside birds could see the paddler. they rose at about 60 yds. & I fired both barrels in vain.

Coot shooting  
in the water

... next time I got two. Then the big flock split up into three or four smaller bunches which we pursued all day. ... with the boy, knocking down for ... one discharged ... by living and we lost two "butter birds" in the ... way.

The big flock was composed almost entirely of ... American Coots with a few ... and ... two Surf Scoters. They presented a superb appearance on the water a shining black mass dotted all over with spots of ... they were ... flew at times. At others they ... in a compact line looking exactly like a black log. They rose at frequent intervals and mounting high in air circled and whirled for many minutes at a time, flying miles before reuniting, and uttering their wild, jingling choruses of "stick-bell" cries. They flew in various orders sometimes in a V, sometimes

Further fire  
Coots

They swelled with or at right angles to their course. At times they "bunched" closely together when we could distinctly & frequently hear the crowded wings strike one another making a noise like a paddled dropped lightly on the water. When they set their wings and descended towards the lake they made a sound like a gale of wind blowing through the woods or perhaps more like escaping steam. This was distinctly audible a mile away.

On the water they frequently executed a sort of swimming dance the whole flock swimming rapidly in a circle, each bird using his paddles to vigorously as to keep most of his body above the surface. This performance made a flashing sound like heavy rain on a still pond. During it they did not use their wings at all. Occasionally, but rarely, a single bird would rise on end and flap his wings like a loon almost incessantly, one or more birds were going through a motion which seems to be peculiar to Scoters if not to the single species *O. americana*. This motion is difficult to describe. The bird seems to raise the entire forward half of his body out of the water and lengthening his neck stretches it straight upward presenting nearly the appearance of a bottle floating with its neck upright. He then shortens his neck & sinks back into the water. The wings are not opened. The action takes only a fraction of a second.

Red. 11. 1. 04

During our pursuit of the Scoters we saw a single Phalarope flying about over the lake but could not mark him down. He looked like a Northern Phalarope but doubtless was really a Red Phalarope as it is too late now for the first named species.

1887  
Oct. 5

Lake Umbagog, Maine.

Blow with light S.W. wind. No rain. Another warm.

At daybreak this morning heard a Pine Grosbeak whistling Pine Grosbeak  
near the camp. A Canada Jay also came about and A Canada Jay  
later in the day descended to the ground in front of the near camp  
tent and took a piece of bread which the cook threw  
out to it.

Off at 8 A.M. rowing into Leonard's Pond and then  
carrying the boat across into the meadow. At the  
landing a Canada Jay was flitting about among  
the stubs.

Just above Pulpit Rock saw a very large muskrat on  
the bank. It galloped along keeping rather heavily  
making as much noise as a dog among the dry  
leaves.

Reaching Pine Hill Pond we entered it and  
paddled nearly half a mile back among the  
stubs for the water is now nearly as high as in  
spring. At the extreme end of the meadow I  
stopped the boat on the side of the boat and  
started eight or ten Black Ducks which had been  
feeding further back among the trees than we could  
get into the boat. There was a Canada Jay among  
the stubs.

Our next stop was at Bear Brook where the water Bear Brook  
was so high that we had to carry the boat over  
the road instead of running under the bridge.  
We ran up the brook nearly half a mile fine paddling  
very slowly and silently. Near the spot where I shot  
the Wood Ducks on my last visit we started two Black Black Ducks  
Ducks at about 40 yds. They swung around us and I  
saw both birds killing with the second but missing  
apparently with the first. I had no

11.6! above this the brook became very narrow and crooked  
Bear Brook with tangled alders arching completely over it in  
places. Finally we were stopped by a mass of logs and  
I rapped the paddle sharply on the boat and we soon  
heard the unmistakable rush of ducks wings. Taking up  
the fox gun and cocking it I waited. After nearly a  
<sup>wrong shot</sup>  
at a Black Duck down the brook but at such a height that he looked  
no larger than a Gull. Lining about ten feet ahead of  
him I fired more in wantonness than with any idea of  
hitting him. On our amazement however he promptly  
collapsed and came hurtling down with fearful velocity  
striking in the brook within a few yards of the boat.

I have never seen a bird fatally hit at such a height  
before. It must have been fully 300 feet. I shot the whole  
bunch loaded with #4 shot (3 dr. 1 oz.) at the bridge on our

White crown  
Sparrows return we found a young White crown Sparrow napping above  
on some left wood in company with a Song Sparrow. I shot it.

Whistlers  
Nearly opposite Bottle Brook Pond we came on three Whistlers  
in company in the river. They rose and flew past us at long  
range. I dropped one with the first barrel (20 gr.) but missed  
with the second. A Downy Woodpecker drumming on the top of  
Canada Jays a tall dead pine. Two Canada Jays screaming & making a  
variety of odd sounds. Landed and eat lunch here.

Partridge  
After lunch crept in to the lower cove of the pond. A fine  
old ♂ Grouse among the black alders on the point. Shot him.  
Concealed myself behind a log on the shore & lay there about

Wood Ducks two hours. A flock of six Wood Ducks passed overhead but  
did not alight. Nothing came into the pond but a Heron &  
Picoides ar. single Black Duck. A pair of Picoides arcticus passed near us  
A Phalarope then a pair came & reported a Duck & a Phalarope in the nest  
Bottle Brook  
Pond cove. The Duck proved a Whistler which I ambushed & shot. The  
Phalarope I could not find. Found to be a young ♂ by shell

1889

Oct. 8

Lake Umbagog, Maine

Cloudy with occasional gleams of sunlight, & a few light showers. Wind N. to S. W. - moderate. Cold. Snow on all the higher mountains.

After spending two rainy days in camp - was glad to get out again this morning. We went first to Leonard's Pond which is now practically a cove of the lake for the water has risen to a height never known before in autumn. Among the stubs were several flocks of Rusty Grackles feeding among the drift wood, numerous Robins flocking about the black cedar berries on which they are now feeding chiefly, great numbers of Yellow-rump, several Flickers and some Sparrows among which I saw a young White-crowned. Shot a Rusty & missed two Flickers. A single Canada Goose sailing over set wings the whole length of the lake heading.

Passed out of the pond at its eastern end - saw a Black Duck feeding in the grass & shot both barrels at him vainly - About 50 yds. - Next to Whale Back Cove. About 20 Black Ducks in grass among the stubs quacking loudly. Puddled up behind a bush & waited. They swam within 30 yds. working busily in various courses among the drift wood. I could not get two together & finally they rose & came straight at us some passing within ten yards or less. I fired both barrels at single birds. The first fell about 50 yds. & fell, the other although hard hit kept on. The one I killed was a fine large bird, evidently a northern. Landed and while fire cooked a Duck I walked more than half way across Whale Back Carry. Killed two Geese. The first down pointed among alders. It rose before I saw it and I brought

it down from an upright one, each with chestnut wings. The second I shot on the ground. It stood erect and still in the middle of the path 35 paces from me. It was a superb old "drummer".

Many small birds along the path. Hermit Thrushes, Titmice, Kinglets etc. A Heterostomus in stubs near one bunching place.

Returned to Leonard's Pond Lake in P.M. Shot a Flicker at long range. Then went to Moon Pond and lay concealed among the stubs until dark. Shot a single Duck came in. The marsh is six to eight feet under water.

Moose Pt.  
in wing

Canada  
Jay

Two five or six Canada Jays among the stubs in different places. Very tame & noisy. They seem to haunt the vicinity of water.

" ?

Alternately cloudy & clear with gale from the W. Occasional light showers.

1 collect took  
Pond.

Off at 8 A.M. going up the Halloway. A Black Duck in the river half a mile up. Banded at Bottle Brook Pond. A Whistler and Hooded Merganser were the only two birds in the pond. They swam all over it keeping close together. The Merganser diving. The Whistler feeding with head and neck under water in company like the one shot on the 5<sup>th</sup>. I followed them about for fully two hours and finally stalked them killing the Merganser on the water & bringing the Whistler down wing broken as it ran by a very long shot. It dove twice & went ashore on the other side of the pond. We took in the boat & I shot it once as it

2 birds  
Hooded Merg.

Sparrow Hawk

crouched among the grass facing the water. Two Sparrow Hawks playing together over the pond. A solitary Sandpiper on an isolated lump of mud. Also a Kingfisher. A flock of fully 75 Pine Siskins whirring over the trees. After lunch

Pine Finches

1884

(Oct. 9)

Lake Umbagog, Maine.

rowed up river to Whet Brook Carry & walked in to the Whet Brook Pond which I have never seen before. It is a beautiful Pond.  
 Shut of water of perhaps ten acres lying in a deep hollow surrounded by dense forest. No Ducks in it.  
 Don pointed a hare near the path. It lay crouched flat on the ground. I called off the dog & we left it.

On our way down river went up Bear Brook. Shot a single Hooded Merganser and shot it. No other Hooded Merg. Ducks seen. Water very high.

Canada Jays were seen in several places along the river. They were as interesting as usual very tame & noisy. Their bearing is gentle and confident at times a little shy. They are not as bold as Blue jays.

Reached camp about dark. Charley started a Duck from the bushes in front of my tent. A Duck seen  
 Yesterday a very large "blue" hawk came and sat in the maple over the cook tent. From Charley's description it must have been a Great Hawk. We saw a Bronze Eagle at Moll's Carry this morning.

" 10 Cloudy most of the day with occasional gleams of sunshine. Morning still up to 10 o'clock. A high N.W. wind the rest of the day.

Shortly after daybreak Jim discovered a large flock of Coots in the lake off B. Cove. As soon as we finished breakfast we put the gear on my boat and started after them. When we were well out in the lake a flock of nine Herring Gulls passed us. After searching for nearly an hour we finally make out the Coots near the usual place off the Cove. we

Large flock of Coots - at usual place  
Herring Gulls.

1889  
Oct. 11

Cloudy all day with a glorious flood of twilight just before sunset. Wind N.W. moderate. No rain to-day.

Started off alone in the Kingston canoe at about 10 a.m. taking the 20 gamp. Went first to Boward's Pond where I shot a Canada Jay and a Flicker. Kingston canoe very few small birds, one or two King sparrows, several Junco sparrows and some Robins.

Thence paddled out past Moose Point and getting sail sped swiftly across to Sturdevant's Cove. In the way a belted Scotie passed me without a long

White wing  
Scotee.

canoe but I did not fire. Landed at Sturdevant's Cove, built a fire and hunched among some tall timber on the edge of the forest ground. A White Heron and two Olive-backed Thrushes came to inspect me hopping around in woods very near. Kinglets and a Hairy Woodpecker in the trees overhead. Suddenly four Sheldrake appeared swimming close in shore within 20 ft. of my canoe. I shot one in the water and wounded another badly as it rose but the latter got off.

Sturdevant's  
Small birds  
Governance

Started back at about 4 P.M. paddling up along the shore to Crocker's Camping ground. To my surprise saw a small Tern (presumably a Kittiwake) flying out over the lake. Shot another Canada Jay from the canoe.

Getting sail again I ran swiftly and comfortably down to Moll's Rock the wind coming strong & steady from the N.W. with my little sea running. As I was passing the Rock Mr. Hoyle called me in and showed me a fine Canada Goose which he shot this morning in Bottle Brook Pond.

14  
Canada Goose  
Shot in  
Bottle Brook  
Pond.

1889

Oct. 12

Cloudy with strong N.W. wind, no rain. A raw, dismal day.

Scoters

Jim called me early reporting a flock of Coots in the Lake. After a hurried breakfast we started in pursuit of them. We soon saw them flying and watched them for a long time as they moved up & down the lake but failed to mark them down. While we were searching for them the wind rose and the lake was soon covered with white caps. As it did fair to be a rough

A late day we gave up the Coots and started for Great Meadows. On the way saw a Cedar Bird feeding on black alder berries.

Sweet M.

Reaching the meadow we paddled in one tin bank and entered a tract of stubs on the right. Started a

Black Ducks

flock of seven Black Ducks which rose out of range.

Paddled to the head of the pond & shot an adult Loon when the brook comes in. Next landed

Partridge

on the west side. A Grouse rose and flying almost straight upward alighted on the naked branch of a yellow birch where I shot him.

Small Hens

After hunting we tramped up one the ridge &

Pond

descended to a beautiful little pond. About 15 Black

Black Ducks

Ducks in it. Jim stalked them twice & brought down one wing broken but it escaped into some alders. A

Canada Jay

Canada Jay screaming like a Hawk on the shore.

Returned to Great Meadows & paddled into the stubs where we started the Duck this morning. The same flock was there. He lay in wait for them and after a while they were within shot. I killed two with the first barrel but failed to get in the second.

My first

Hawk Owl

As we neared Moll's Carry the sun had just set in

a patch of clear sky. Jim pointed out a small

owl sitting on the slender spire of a tall dead stub.

He paddled into the stubs & I shot him. He proved a Hawk Owl.

He proved a Hawk Owl. I saw two more.

1889

Lake Umbagog, Maine.

Oct. 13

Cloudless with clear bracing air. Wind N. to N.E. Water from  
2 to 12 ft.

At 10 a.m. started for Bottle Brook Pond. Saw nothing  
save a single Black Duck flying until we reached the  
beard just below Horse Horn Pond where I heard a Green  
drum. Sounded & went in search of him. He did not  
drum again but I stumbled on him by chance &  
hearing a rustle among the leaves saw him run a few  
steps & then stop when I shot him. He proved a fine  
large bird. Also shot a ♀ Pisides arcticus which was  
pecking at the trunk of a live spruce, attracting my  
attention by the noise it made.

At the next beard started a Merganser which did  
not give me a shot, however.

Reaching Bottle Brook Pond we hunched and I then  
visited all the coves in succession to my disappoint-  
ment there was not a single Duck of any kind  
in the pond. Saw a Canada Jay, a Tree Sparrow  
a Blue Jay & several Robins

Up to that point up which we paddled further  
than I have been before. Saw nothing but a  
Kingfisher & some Tree Sparrows.

Next lower river two hounds running down  
Pine Hill making the woods ring with their deep  
voices. We heard several shots on the hill but the  
dogs continued giving tongue long afterwards.

Turned into Pine Hill Pond and killed a Black  
Duck there, a solitary bird which we surprised in  
a deep cove & which I shot sitting. Had a rather  
long shot at another just after we emerged from  
Moll's Carry on our way back to camp but  
missed. It came flying towards us as we were in  
the cove

1889

Oct. 14 Cloudy most of the day clearing late in P.M. Sunset very fine the air wonderfully clear, the mountains covered with a rose-colored haze.

At work on specimens during most of the day. Took  
White wings & a sail in the canoe late in P.M. Three Scoters (I  
Scoters think Mc. velutina) passed me in the twilight  
flying very swiftly close to the water.

" 15 Cloudless with cool bracing N. wind and warm sun  
A perfect October day.

Leonard's Pond At work on my birds until 3 P.M. when I took  
the little canoe and paddled to Leonard's Pond  
A few the Sparrows, juncos & Chickadees there. At  
Black Ducks sunset two small flocks of Black Ducks passed  
one going towards Moon Point. I followed them  
but could not find them. The water has fallen  
more than a foot and the grass on Moon Point  
Waterfalloing marsh is appearing again. The musk rats have  
started a house there. I saw and heard at  
least eight or ten of them some making the  
peculiar muzzling call

Pileated W. This morning a Pileated Woodpecker called in  
the woods behind the camp. One Eagle also  
Bald Eagle, sailed one. Most of the small birds seem to have  
Some gone south. Even Chickadees & Kinglets are much  
birds scarce scarcer than they were a week ago. The haws are  
now nearly all down and the deciduous trees  
all fallen bare.

1887

Oct. 16

Lake Umbagog, Maine.

near and still the lake calm nearly all day. Morning cold, water freezing, noon deliciously warm.

Early this morning Jim shot a Scotie (*Q. americana*) which was swimming just over landing. It was very thin & had a broken wing.

Wounded  
was thin

After breakfast we started out on the lake. Saw a flock of seven light-colored birds which I took to be Old Squeaws swimming off B. Brook Cove & a pair of Scoties in the cove below our camp. Started for the latter when they separated & began diving. Seeing that they were wounded birds we turned back for the flock but it had disappeared. Rowed to Metathus Island. No birds in Tyler Cove except a loon. Then back to camp past B. Brook Cove. Hearing a loud like escaping steam we looked up & discovered a flock of nine Scoties sealing down from us in immense height. They alighted near Great Id. This was about 10 a.m.

Old Squeaws 2  
Scoties 9

Scoties swimming  
from above

Making a fresh start we went down river to Inland Meadows I in the Rushton cove. A Lark & a Spotted Sandpiper on a boom of logs near Moll's Carry. An adult ♂ Golden-eye in full plumage in Inland Meadow pond, diving. He saw us, rose, & came back over us at about 150 ft height. I fired one barrel at him in vain. The shot started nine Black Ducks which flew directly to the forest pond behind the Birch ridge. He followed them. Creeping to the edge of this pond I saw a Duck feeding about 50 yds. away. Shot at & wounded it, it flew into some alders where Doc flushed it & I killed it. To my surprise it proved to be a Hood Drake. I had taken it for a Black Duck as it was between me & the tree. The shot started about 15 Black Ducks from the pond.

1889

Oct. 17

A beautiful morning, cloudless, the lake calm. By 10 A. M. a strong N. W. wind brought a heavy pall of clouds over the sky and the remainder of the day was chilly & gloomy, the wind from land last night.

Woodcock  
gone.

I left Lakeside about 9 A. M. and went first around the Sargent Cove. I landed at the Woodcock cove and beat it carefully but found nothing. Thence we kept on along the west shore of the Inver Cove. I fired a long flying shot at a dove Jay but missed. He landed at the mouth of a little brook to lunch where a Grouse started and flew up the hillside rising high among the trees. I followed and finally discovered her perched on the horizontal branch of a huge hemlock about 40 ft. above the ground. He fell the first victim to the Damascus barrels of my little 20 gauge.

Partridge  
114.

My first  
Goshawk

Its next victim was a pine, a fine young Goshawk, the first I have ever killed. It rose from some drift wood and alighted on the branch of a tall ash. pine paddled me slowly & silently to within 30 yds. & the Hawk fell dead as I pressed the trigger. He sat very erect and was a fine, daring looking fellow. A little further on a Surf Grouse swam out from the shore & after a few dashes was shot. It was a wing broken "cripple", very thin.

Wounded  
Scaup shot

At the jet behind the Great Island I shot a Canada Jay flying. Not over 100 yds further on a Black Duck & Great Blue Heron started out of range. It is singular that the report had not alarmed them. On the little island where I once took a *Sicivides americanus* I discovered a Grouse perched among the branches of a birch & shot it. Another flew into a thicket of Spruces where I followed & killed it on the ground. On reaching camp Charley told us that a flock of about 25 Geese came into the lake at 6 P.M. & wintered & spent the night at 11 P.M. to day.

Partridge  
Shooting

Canada Geese  
in the Lake

1887  
Oct. 18

Lake Umbagog, Maine

The sun rose clear but clouds quickly gathered and the remainder of the day was dark & cold with a high N.W. wind.

The Great Horned Owl came to the dead hickock nearly one  
my tent some time before daylight and worked me by  
his hooting. I have never heard him utter anything but  
the hoo, hoo-hoo, hoo, hoo variation. His note at hand  
sounds soft and mournful - almost like the cooing of a Dove.

Bubo insito  
near  
Camping ground

I rose at six. While waiting for breakfast I observed  
Don sniffing the air and looking eagerly up the side  
of the knoll above our open camp. I ordered him on  
when he drew" about 30 yards and pointed. Taking the  
30 yards I followed and presently espied the head of  
a Goose bobbing up and down behind a log. I shot  
her when two more rose, one going into a spruce where  
I killed him with the second barrel. The other flying  
out of sight.

Partridge  
near the knoll  
above the camp

A little later a Hawk which I think was a Pigeon Hawk  
came flying in from the lake past the camp. I also  
saw a high Redpoll Brunt in the birds one very tent. A  
pair of Canada Jays visit our camp daily now.

Pigeon's Hawk  
near post camp.  
Redpoll.

After breakfast we started for Rapid River Jim taking  
Don and the druffe in his boat while I sailed the entire  
distance in the Ruxton canoe. On the way up river  
to Cedar Stump we started some Gulldrake. I find a  
boy that at one but missed. Landed and I walked  
up the old carry road to where it joins the new. Saw  
nothing to return & built a fire. Two Pine Grosbeaks  
flying about. A large flock of White-winged Crossbills  
chattering but invisible as usual, probably flying. Jim  
finally returned with two Geese. He had seen some in all

Canada Jay  
Up to Rapid  
River.

Gosswander

Pine Grosbeak  
White w. Crossbill

Partridge

Rowed to Abbe's back towing the canoe a heavy sea  
running. I went half over the top road but saw nothing.  
Had an exciting sail back to camp the wind blowing a gale.

1889

Oct. 17

A warm sunny day with floating clouds and some haze. Wind S. to S.W. - Moderate

Old Squaws  
in  
Laker  
Flock of  
Holboell's  
Grebes

Just after breakfast we discovered a flock of six Old Squaws in the wake off B. Brook Cove. Putting the grass on my boat we started after them when Jim spied another flock of eight light-colored birds within a few hundred yards. We paddled out to them at once. Through my glass I could see that they were Grebes and one was unmistakably a Horned Grebe. The others looked no larger but appeared brown in color. We were now within 30 yds and concluding that they were all Horned Grebes I raised my head & began to talk to Jim. Hitherto all the birds in the flock had been floating idly on the calm water & planning themselves. At once up went seven long necks and to my surprise I recognized their owners as Red-necked Grebes. It was too late for a bunch shot as they scattered and began to swim. The next instant they flew. I knocked one over with each barrel getting both after several more shots in the water they made short dives and showed the whole head & neck as they came to the surface.

Old Squaws

We next tried the Old Squaws but they were as wild as Black Ducks. Four of the six were fine old drakes.

When they flew they joined a flock of about thirty Au.

Bruin's  
Coots

Geese which we had not hitherto seen. We finally paddled to the Laker near Metallus Id. & I flopped seven with four barrels (of my two guns) getting all after reshooting two or three. Six of the seven were young birds. There was not a black male in the whole flock. While picking them up I could hear at least two Black-bellied Plover whistling. Went down the Laker Cove after them but in vain. Reached & visited the famous Laker Spring. A Whitey Duck was

Black-bellied  
Plover.

Oct. 27

him and then returned to the boat.

found the covey & shot it. I shot it & fired a wildly long shot at him as he darted past several Sheldrakes started at various places. I landed at a pretty sheltered spot for lunch. I squeaked up to a flock of Kittiwake (both species mixed, a Ruby-crowned Kinglet & little carolinensis with them. Two Pine Siskins flitting among the alders, both brown birds.

Hooded Merganser

Parus hudson

Red

Canoe back down the lake & tried the old game again. As we they flew at fully 300 yards. Returned to camp and I went out sailing in the little canoe talking the 20 jumps (Damasus barrels). Heard a bird making a noise like a Red-shouldered Hawk when who, who, who. Sailed towards the place where a large bird was & flew past me about 200 yards off. It flew like a Gannet extremely flapping & sailing & finally plunged down into the water in the middle of the lake. It looked dark brown & showed a conspicuous white speculum. Shortly after saw another which made the same noise. I cannot even guess what they can have been. They were larger than loons.

Loon Shrike

four merrymen

Sailed over to Reason Point & took down the sail. The gun had set but it was still daylight when, nearly half a mile away, crowning the slender top of a dead ash on the shore of Bernard's Pond, I make out a Hawk Owl. Paddled to within 20 feet of the foot of the stub and shot my choked barrel at him. He flew & my right barrel missed. He went only about 100 yards & alighted near the top of another dead tree. I landed again got nearly under him & again shot the choked barrel. A handful of feathers floated down but the bird scalded off across the pond my second barrel failing to stop him. I followed & started him again in close second growth getting a near glaucous at him. Disgusted beyond measure I returned to camp in the twilight.

about 1/2

mile

from

1887

Oct. 31 Day, very cold in the early morning, warm at noon. Wind shifting into every quarter, light all day.

Outlet Breakfast at 7 o'clock. Off at about 8 a.m., rowing up to the marshes, outlet and thence following the river (which has now resumed

Snow Buntings well defined banks) to Richardson's Carry. Snow Buntings &

Pillars Titlarks piping over the marshes. A Hooded Merganser flushed from the mire. At Moon Point a Buff-head swimming close to the sunny side of the bank. Jim paddled me within good shot (our boat was grassed) when I was foolish enough to try to change guns & take the 20 gage. The little Duck

saw the motion & rose when I missed with both barrels.

aw. Next to Whale-back Cove. A *Tringa alpina* rose wild from the shore. A Black Duck rose out from the grass &

Black Duck rose. I fired a long shot vainly. Saw a flock of about a dozen Scoters flying towards Sunday Cove.

Turned back and doubling Pine Point rounded down into Gospy Cove. Two Horned Grebes seen, each near shore. In

the cove two Scoters apparently feeding close to the marsh. One dove. I shot the other & found it to be a young *Buteo* bird apparently, not a wounded bird. Hearing a Grouse chatter we

Pa. Ridge landed and I at once saw a magnificent *Dumetia* strutting among the driftwood his tail erect and spread like a fan.

Shooting Shot him when others began to chatter & stalk along among the bushes. In less than five minutes I had killed six,

all sitting, in six shots. They were all we could find. Four were ♀♀ over a young ♂. I distinctly heard one of them utter

Snow Buntings a low *coo-coo-coo-coo* several times. A flock of about forty Snow Buntings slighted in the grass. Large flocks of

Red-polls & White-winged Crossbills heard flying over. Returned to camp to dinner. Went out after dark as usual.

Bubo Heard two Great-Horned Owls hooting & saw a Small Owl, perhaps a Short-eared, flying near Moss's Carry. Two Wilson's

Shore-larks Snipe rose from the edge of Leonard's Pond in the twilight.

1884

22

Lake Umbagog, Maine.

32°. Very cold at 8 o'clock, then warmer with S.W. wind

Ran at 6:30. While waiting for breakfast saw a fine adult Buffle-head & Buffle-head floating on the calm surface of the Lake opposite Duck Back our camp. Jim paddled me out but just before we started two Whistlers joined in bird and of course started him long before we were within gun range.

Just after breakfast a pair of Buffle-heads, the ♂ a hup & a hup 2 pair of adult ♀s the ♂ was just mentioned, lighted in the corner just north of camp I went over land to the water's edge but they rowed across to the Woods Rock shore and began diving there. Accordingly I returned & Jim paddled me across the south of the corner. Boarding just inside the Rock I saw through the woods and by sneaking thru some other birds were under water got within good range. I fired as they rowed together killing the adult ♂. The other bird down, quite by chance, just as I pressed the trigger & I had to fire the other barrel at her after she came to the surface. On my way through the woods I passed within a few yards of two Geese. After killing the Ducks I went after them but only found one which was among dense bushes & went off unshot at.

We next rowed down the Lake to the Hayward farm where we landed & I walked around the entire opening. Saw only one Geese which Don pointed & I shot. Came on a Porcupine feeding on grass, apparently, & photographed him. Saw a Goosawk chase a Robin into some low willows where he overtook & killed his bird, the screams of the poor Robin lasted some a minute. I went in of course & flushed the Hawk but missed a hard snap that he carried off his prey whose feathers showed the ground.

Saw many Whistlers to-day three of four of them adult ♂ Whistlers Red drake also numerous. Heard a deer in Black H. Con. I near.  
Saw two Black Ducks in Lake Con.

1889

Oct. 23 Cloudless with strong N.W. wind. It snowed a little last night and afterwards cleared off very cold. The meadows and edges of the river and bays were frozen and the ice as well as snow lasted all day even in places partly exposed to the sun. In short it has been by far the coldest day we have yet had.

Canada jays After watching the three Canada jays that we have baited at camp & taking several photographs of them I started off with Jim at about 8 a.m. He rowed to the Outlet & paddled down river. He had gone only a short distance when we saw a Duck descend on set wings & alight in the middle of the river. It was about 40 yds. ahead & I shot it. It proved to be a young Surf Scoter.

Surf Scoter  
alights in  
Andrews Bay  
River

Leonard's P.

Saw three Ducks enter the Outlet of Leonard's Pond & landing I tried to stalk them. Could not find them but discovered a single adult ♂ Gossander diving near the opposite shore of the island. Returned to the boat & tried to paddle across to the island but a number of Ducks rose and went out. Six Hooded Mergansers came back past us but I wanted the Gossander & did not shoot. He stayed in the water but a few moments later was gone. Tried to paddle to two young Goldeneyes asleep on a mud bank but they

Gossander

Saw in

to paddle

Hooded

Mergansers

to

awoke & flew. Saw some Ducks alight below & tried another stalk. Crossed the island & found my birds, six Hooded Mergansers, three of them adult males in full plumage. It was sometime before I recognized them for they kept their crest down. They followed the opposite shore in a westerly direction. I watched them one an hour but they would not cross to

my side. Saw an adult ♂ Bufflehead flying over the pond.

Bufflehead

to

to

to

Lake Umbagog, Maine

Oct. 27

As I was in the boat at 10 o'clock I saw a flock of about 1000 birds flying over the water. They were all of the same species and were flying in a regular line from the north.

For the first time I have ever seen a flock of this size. I have seen many flocks of 500 or 600 but never more than 1000. They were flying in a regular line from the north of the lake and were killed both at one shot (a 8 & 9).

At 11 o'clock I was in the boat with the Captain and his son. We were in the boat when the birds were flying over the water. I saw a flock of about 1000 birds flying over the water. They were all of the same species and were flying in a regular line from the north.

I saw a flock of about 1000 birds flying over the water. They were all of the same species and were flying in a regular line from the north. I saw a flock of about 1000 birds flying over the water. They were all of the same species and were flying in a regular line from the north.

1884

Lake Umbagog, Maine

Oct. 25

Clear with light S.E. wind. Hard frost last night.

Just after breakfast heard Pine Grosbeaks whistling around the camp. Went in search of them & came upon some well as usual & shot one. Secured a sack of Pine Grosbeaks & shot one.

Went at 10 a.m. Went first to Leonard's Pond. I should note & in Brown Hooded Merganser there. Found a long flying that at the latter but missed. Passing out by Moon Point saw a superb Shrike. As he flew up from the grass & alighted on a root he looked so white that I took him at first for a Snow Bunting.

Roved from Moon Point to Rapid River. On the way started a flock of nine Scaup Ducks (F. americana, I think). They rose very wild and we did not try to get a shot at them after they exhibited.

Reaching the mouth of the river I took a station on the west bank & sent Jim up with the boat to drain the beds down a bit. Came a flock of six Hooded Mergansers, doubtless the same seen yesterday. They passed over me too high for a shot. After them came some Golden-eyes also too high. Finally a single Goldeneye came down before the wind flying very fast & passing within 15 yds. of me. I shot with barrels and made a clean miss with each.

While Jim was tramping through the woods after Grouse (of which he shot two) I spent the afternoon going in wood in the hope of shooting a few more at the old place. It is possible to get in the afternoon, but

Started back for camp at dusk. Just as we were leaving the landing a Grouse came skimming across the river & plunged down into a thicket of grass. As I approached I could hear his rustling among the leaves. I went in but failed to find him. Afterwards Jim tried it and started him nearly under foot. Probably he had killed three for the night I used the little canoe to-day Jim going on his own boat.

Sept. 26 3 o'clock all was clearing at sunset. Scarcely a breath of wind. Mercur.

Redpolls Redpolls came into the birches near camp and with them several  
Pine Grosbeaks I secured eight, two of them adult males. Also heard Pine Grosbeaks  
White-w. Crossbills & a flock of White-winged Crossbills in the distance.

Trip up Started off in the boat at about 9 a. m. going through  
Megalloway R. Moll's Carry and thence up the Megalloway. As we passed  
A. Late Crow Moll's Rock a solitary Crow started from a stub & flew across  
Hooded the lake. Just after we had entered the river four Mercurians  
Mercurians flew through the Carry & out into the lake.

" For the first two or three miles up the Megalloway we  
saw nothing save four Mercurians, then in our flock, one  
single bird. They kept flying on ahead of us in their  
usual fashion.

White-winged Crossbills " A little below Horse-shoe Pond saw a flock of about 20  
White-winged Crossbills alight in some spruces on the left  
bank. Banded and shot two both my long shots as the  
birds were perched on tall dead pines. The flock kept  
dashing through the trees from place to place frequently  
alighting but I could not get a sight at any of them in  
the spruces.

Pulpit Rock Landed at Pulpit Rock for lunch. Heard a Woodpecker tapping  
I shot in heavy spruce timber on the hillside & going to the place  
three *Picoides* found a ♀ *Picoides arcticus* which I shot at. She flew a  
21. *arcticus* short distance & alighted then turned head down & hung by one  
1. *americanus* foot. I was about to take her off the tree when I heard another  
Woodpecker tapping a few rods off. Looking I discovered a fine  
& *Picoides americanus* working up the trunk of a large Spruce.  
& quickly shot him. I recognized him the first glance.  
Afterwards shot a ♂ *P. arcticus* near the Rock as we were  
eating lunch. He came from across the river, calling  
hloc, hloc as he flew, and alighted on a tall slender fir.

1887  
(Oct. 26)

Lake Umbagog, Maine.

Although killed dead by the shot I fired at him he  
clung to the tree, apparently by his bill, & tenaciously that  
I had to get Jim to cut it down.

After I had pulled up to Bottle Neck Pond, so  
back in it. We took in the boat & paddled all around  
sides of the cove. Found a dead Muskrat in the grass,  
just below this pond three young men were camping. They  
were hunting muskrats, they said & had killed two. A  
Grouse drummed near their camp last night or rather  
this morning between 2 & 3 o'clock. They had found his  
log & intended to roast him to-night.

Went into Bear Brook on our way down but found it  
frozen as far up as we could see.

Now I down to the falls & went through Bessie's  
Pond to Moose Point. Heard Drills quacking in various  
parts of the marsh but the water was so low we  
could not get the boat in far. Saw one Black Duck  
flying quacking loudly & then answering him from the  
marsh. Muskrat to my mind was looking & eating all of "wicks"

The Megalloway was very peaceful and beautiful to-day.  
A soft gray light over everything. Dead sticks  
broken only by the occasional cack of a squirrel, the  
chirping of chickadees or the screaming of Blue jays.  
The latter were very numerous and noisy. They are  
exceedingly shy here.

Saw two Hermit Thrushes on the shore of Bottle Neck  
Pond. Started a Grouse near Pulpit Rock Spring  
& fired a trap shot at him but missed. Did  
not get a shot at a Duck all day.

In the Lake near the Cove, saw two Horned Grebes  
this morning. They were diving for food apparently.  
The Lake is now as low as in September 1886

1889

Oct. 27

Cloudy with light rain at intervals. Sea very calm.

Spent the day in camp skinning birds. There were no

"Sea Ducks"

small flocks of "Sea Ducks" in the water flying up &

the water

down close to the water occasional alighting near

the middle opposite our camp. One flock of 8 birds

Old Squaw

mine birds which seemed to be wholly black except the top of the head which looked white or whitish. They may have been Old Squaws but they appeared to be much larger.

" 28

A warm day with frequent heavy showers, low hanging clouds and S. to N.E. wind.

Broke camp to-day and went to Lakeside by steamer late in the afternoon. Caught two Canada Jays in a box and took them down with me. Saw no ducks.

" 29

Cloudy with light rain nearly all day. Wind N.E. moderate. Spent the day at Lakeside packing. No observations.

" 30

Very misty & cloudy with fine drizzling rain. Most of day clearing the men peeping out at intervals.

Left Lakeside for Bethel at 8 A.M. Just as the stage was about to start immense numbers of Seedeers suddenly appeared flying high and finally sweeping down after many evolutions & alighting in great separate flocks. The largest flock contained fully 500 birds. Some boats put out in pursuit of them but they were sighted & began circling again. There were six Robins in the field in front of the house.

Seedeers  
appear in  
winter time  
numbers  
alighting in  
the water  
about 1000

Robins

On the way to Bethel saw Robins in small numbers, one Canada Jay just above the Notch, a Snipe which started from the roadside below the Notch & two Grouse in the road below the Notch, also three Grouse in clearing

1884

Nov. 25

Waltham &amp; Belmont, Mass.

Cloudy and warm but damp with light S.W. wind.

Off at 9:30 a.m. driving to the Warren place, taking Grop with me to hold the horse. I also took the Gordon setter puppy "Dandy", this being his first experience in the woods. I looked for Grouse and Quail in several likely places but saw none. The puppy behaved very well and hunted with some vigor & intelligence.

The chief object of my trip, however, was to look for Crossbills, Pine Grosbeaks & Redpolls all of which have been reported as about in some numbers.

On the hill behind the Warren place I heard a flock of Red Crossbills distinctly, twice, but failed to find them. In the dense young pitch pine on this hill were several Chickadees and Kinglets (*parus*) accompanied by a *Catherina* which I shot. In the red cedars in the pasture on the north slope were a number of Blue Jays. Crows cawing overhead at intervals, and struggling birds. Goldfinches heard flying. Their note is more suggestive of summer than that of any other of our winter residents.

Meeting Grop at the lane we started on towards the Flag place. Just beyond the willows came on a flock of about 50 Redpolls & killed five, all *linearis*. Three English Sparrows in the roadline I shot at them killing one & breaking the wing of another which ~~fell~~ to a stone wall like a water & escaped. Also shot a *Catherina* in a willow over the road.

Went to the Belmont willows. Beat Rock Meadows for Snipe but got only a wet foot for my pains getting one one of my rubber boots in a hole. The meadow absolutely desolate but at its eastern end in the delta a flock of fully 400 ~~was~~ of sparrows. I drove them on ahead up into Prospect St.

Several of them sang as loudly and freely as in spring.

Next and last I tried the cedar woods on the crest of the hill. Two Flickers and a few Chickadees & Kinglets were

1889

(Nov. 25)

all the birds I found there but in the fields beyond the spring meadows to the north I came upon a large flock of Redpolls - fully 100 birds - feeding. I first shot into them at random killing four *Linaria*. They alighted again not far off. I then got nearly under them and picked out one of the largest killed it with the auxiliary. It proved to be a typical *A. rostrata*. These were four or five more equally big and doubtless of the same form.

During the day I did not see a single Robin or Junco. There was a Song Sparrow chirping in the meadow near the spring while I was after the Redpolls. I neither heard nor saw any Pine Grosbeaks. If they are really here I cannot imagine what they find to eat as there are literally no cedar or mountain ash berries this autumn. The Redpolls are well provided for as the gray fields have an abundant crop of seeds.

1889

Nov. 26

Sibley &amp; Matthews, Mass.

Clear and cool (temp 28 at sunrise) with strong, dry N.W. wind.

Off at 9 a.m. driving to Prospect St. and spending the forenoon in or near the Cotton race. Found Redpolls numerous in the extensive tract of birches near the head of this race. They were in smaller flocks than yesterday and seemed more restless.

I spent much time in trying to detect specimens of A. costata among them and believe that I really saw and, in fact, shot, one but it scaled off and dropped among some oaks where I could not find it. I picked out and shot three adult ♂ Linaria and sacrificed two or three young birds that looked large, on the chances of their proving to be rostrata. I used my 20 g. gun and in every case fired the amplitude at single birds. While following a flock of Redpolls I heard a Pine Grosbeak and assuming its whistled call I shot it down into a birch where I shot it. It was a ♀ and had the bill gummy with some kind of pitch.

There were a few Robins among the birches and I came on a little flock of four or five among scrub oaks where they kept flying down to a spring to drink. All were silent and reserved in manner acting like our small Hypocitella Thomsoni. They were very tame & evidently northern birds I thought.

In the cedar woods I saw two Certhias and shot one of them. I lurched among some pitch pines near Arlington Heights. A large flock of Chickadees accompanied by a few Kinglets came about and inspected me curiously. Crows cawing in the distance. A flock of Red Crossbills whistling as they passed high overhead.

In one of the flocks of Redpolls were several Pine Siskins. At 2 P.M. returned to the buggy and drove to Wellington Camp. Saw a Downy Woodpecker on the way. Nothing in the camp but a flock of Chickadees & Kinglets.

Went to the Warren race entering from the westerly side and

1889

(Nov. 26)

going only through the old orchard to the edge of the  
bushes beyond. The sun was now nearly down to the  
horizon. A Flicker in the orchard very shy calling pe-ck  
and wor-ee-roo. Some Chickadees with a Certhia which I  
shot. Two Sparrows in a bush swamp. More Redpolls, a small  
flock only busy, gleaming their ruff. Picked out a long-  
breasted ♂ & shot ~~him~~. Turning back through the orchard  
I spied a Shrike perched on the topmost spray of an  
elm. As I approached he flitted his tail uneasily, &  
finally, just before I got within range, started off  
over the open fields, swinging in long swift undulations  
until out of sight. Hearing a Snow Bunting I looked up  
and discovered an immense flock - fully 200 - stretched  
out in a broad band flying westward at a height of  
about 200 ft. The sitting ones brought out their black &  
white coloring in sharp contrast against the blue sky. Where  
could they have been going?

I saw several small flocks of Junco along the roadside  
in or near cedars. Has the great autumnal flight passed?

Shrike

Snow Bunting

1887  
Nov. 30

Waltham & East Weyington, Mass.

Clear and cold with high N.W. wind. Ground frozen hard all day in the shade, in the sun thawing & muddy.

This being the last day of the "free season" for Ruffed Grouse. <sup>Grouse-hunting</sup> I made a trip after them starting at 9 A.M. and driving first to Sherman's Pond in Waltham. It was a cold drive, facing the keen wind and I saw nothing by the way save a few Tree Sparrows, Lone Junco, three Crows, and a Downy Woodpecker. Reaching the pond I left Grog in charge of the horse and started in on the east shore. I had the pointer puppy "Pin" (son of my old "Doe"), with me this being his first hunt. He proved too green and timid to be of any use keeping at heel most of the time and paying no attention whatever to the few Grouse I started.

My first bird rose among dense sashbury bushes on a rise with bull-briars on the steep hillside sloping down to the pond. It did not come out in sight until fully fifty yards off when I fired a quick shot getting just one feather to show that my aim was not wholly bad. There were no small birds on this hill except a few Chickadees and Kinglets. The pond was wholly free from ice. A man working on its shore told me that few Ducks are seen there now in autumn but that last spring many Black Ducks alighted in the pond. It has changed little if at all in the last twenty years. The shore where I used to shoot one live decoy in 1868 is still an unbroken belt of woods with perhaps more bordering marsh than it used to have. There are no new buildings on or near the shores.

Returning to the buggy I drove over the high hill to the westward and near the cross roads beyond entered the woods on the left. The cover was exceedingly difficult, dense oak scrub with a tangle of blackberry bushes beneath. A little way in, however, I started a Grouse on the edge of a dense

1880  
Nov. 10

ground. It rose about 20 yards ahead and came directly  
at me rising just above the scrub which was here about  
10 ft. high. I had a fairly open shot but a very awkward  
one firing my first barrel as the bird was coming "head on"  
at perhaps twenty yards, and cutting a whole handful of  
feather from it but failing to stop it, then whistling  
and pulling the second trigger after it had passed  
probably missing "clean". I saw the bird scale nearly a  
quarter of a mile over the hill behind where I searched  
for it some time afterwards, in vain.

Next down to the lone pine ground or, as I used to call  
it, Lexington house. In the big woods on the hill I  
started two more Grouse in dense cover on the edge of a  
springy run. One of them gave me a long deep shot  
which proved a miss.

I took a long tramp in this region going over all  
my old grounds. Small birds were exceedingly scarce.  
I met one mixed flock of Chickadees & Kinglets (Parus)  
accompanied by the inevitable <sup>single</sup> Catbird and afterwards  
found a second Catbird alone in some open oak &  
maple woods. I also saw two Redpolls and heard a  
few others. Then with perhaps two Tree Sparrows complete  
the list.

During the drive home in the lake afternoon we saw  
absolutely nothing out on or two Crows and a few  
Tree Sparrows.

Chickadees  
Kinglets

Catbirds

Marston's Mills, Mass.

1889

Dec. 4

Cloudy with strong N. E. wind and frequent snow squalls.

I came here yesterday by the 4.15 P. M. train from Boston bringing my 20 g. gun and the Gordon letter, puppy "Dandy" (15 days months old) my chief object being to try the latter thoroughly on snail & huffed grouse. It is thirteen years since I was over Cape. Carter & his good wife but I found them little changed and Marston's Mills not at all changed. In some little quiet village with the woods, fields and swamps just as of yore.

At about 9 A. M. I started out crossing the road and entering the great woods behind the Hickley house. A strong, chill N. E. wind was blowing with every now & then a flurry of snow. It snowed last night also and the entire face of the country was white for the first time this year, but the depth of the total fall did not exceed an inch, just enough to show tracks well.

Passing a moment among some vines to watch a mixed flock of Chickadees and Kinglets (*Troglodytes*) I entered an opening beyond and started its border encouraging the dog to range among the oak scrub, as well as I could. He had not gone far when he ran plump over a huffed grouse which lay very close under some mulberry brush and, upon rising, came directly over my head. I shot at it after it passed me but missed. Following it the dog, after a long search, flushed it again showing no disposition to point although he huffed. The ground eagerly where it lain. I again followed it and after a still longer search the puppy flushed it a third time from a cluster of ink berry bushes (*Ilex* glabra) in a swamp. This time I made a slight point on its track but

almost immediately started on into the bushes when it  
was. I could not find it again, nor did I succeed  
in starting any more Mice although I worked  
over a good deal of ground.

During this tramp I saw nothing but <sup>the</sup> Chickadees  
and Kinglets just mentioned, a few Tree Sparrows, and  
a brown Eagle (Haliaeetus), the latter soaring over the  
woods.

In the afternoon I went out again with Bernard  
Hendley taking the road south to the Goodford opening.  
Found the tracks of a small bevy of Deer in the  
snow in a weed field but could not start them.  
The Juppy showed some interest here sniffing the  
ground excitedly but not stopping. He is a wild  
ranger in the open but I can easily keep him in  
sight in dense cover.

This afternoon we saw a flock of 15 Otocoris and  
heard Redpolls (Acanthis) in the air.

1889  
Dec. 5

Clear, still, and very warm & pleasant in the sun.

After breakfast I started out alone with "Dandy", going down behind the barn towards the river. In the swamp at the foot of the hill I found a flock of fully 50 Yellow-rumps (*D. coronata*) flitting about in the leafless tupelos and maples, occasionally visiting the pines on the neighboring sandy knolls. In the binary thickets along the edge of the salt marsh Tree Sparrows were abundant and Song Sparrows common, three or four of the latter often starting out at once as the dog invaded their retreat. In one of the great, grassy hills I started eight or ten Meadow Larks one of which I surprised under a bank and dropped at long range as it rose. The others crossed the river.

Beyond the boat house I came to an extensive thicket of wild rose, sumac & bayberry bushes growing along the foot of a bank on the very edge of the salt marshes. Here I found a flock of over 100 small birds most of them Tree Sparrows & Yellow-rumps (about equally divided in numbers) with a few Song Sparrows, two Robins one Swamp Sparrow and one Field Sparrow. The Tree Sparrows and Yellow-rumps were eating Bayberries and I suspect that the Field Sparrow & Robins were similarly engaged although I did not actually see them at it. The Song & Swamp Sparrows kept down among the grass and weeds ~~on~~ or near the ground. There were also several *Coccyzus* flitting about the place. The Tree Sparrows sang loudly & bravely at intervals and twice I heard a Song Sparrow practising in low, warbling tones.

After watching these birds for some time I advanced

towards the river driving most of the flock before me.

On reaching the river I found Song Sparrows in numbers among the thickets and in a belt of sweet gale and cat-tail flags along the edge of the stream at least ten or a dozen Swamp Sparrows. The bushes swamps along the course of the brook as far as the village were simply alive with Yellow-rumps & Tree Sparrows. These swamps have a rather vigorous but low growth of tufelos with an undergrowth of swamp pink (*Ursula viscosa*) *Andromeda ligustrina*, *Clethra*, *Rosa Carolina* (?) etc. among with such a profusion of wild grape and Smilax vines as to be practically impenetrable in many places.

Some of these thickets springs abound, gushing out of the ground every few rods, spreading about and ~~by their warmth~~ encouraging a growth of various semi-aquatic plants which are said to keep green all winter long.

Among some pines in a hollow near this swamp I found several Blue jays one of which I shot.

Returned to the house at 1.30 P.M. After lunch drove to the village and out on the Neck, with Capt. Baxter, saw no birds of any interest, in fact none whatever except a few Crows & Chickadees

Marston's Mills, Mass.

is, rather warm day with frequent intervals of sunshine alternating with brief periods of cloudiness.

Starting at about 1 P.M. I walked down the road to the wood-ped opening, then ~~around~~ through a succession of weed fields as far as the "shop", and back through the woods bordering the hills along the river.

"Dandy" worked better than heretofore but found no scent (except in one place where he "drew" for fifty yards or more along the edge of some oak & pine scrub) until we reached the big woods. Here, in an opening surrounded by young pines, he made a doubtful kind of point & before I could get to him, wood on flushing a Grouse from among the stems of a cluster of scrub oaks. He then sat down looking a little frightened & bewildered. As I approached two more Grouse flew from an adjoining cluster of oaks and I fired a long shot at <sup>one</sup> of them but missed. I then encouraged the puppy to investigate the spot whence they started and as soon as he approached it closely he made a really excellent and staunch point.

Following the Grouse into some dense scrub I found that my pup had suddenly changed from a blundering, ignorant novice into an earnest and very cautious hunter. He roamed two birds long distances, drawing and pointing beautifully at frequent intervals. One he failed to overtake but the other got up unsuspectingly among some thick young oaks giving me a rather hard cross shot. At the report the bird fell and began beating the ground with its wings in its death struggle. The dog then walked up to it cautiously and pointed dead very handsomely. I photographed him on the spot, lying by the side of his first bird in a little opening where the sunlight streamed in on the

Dec 6

leaf-covered ground. The Grouse was a very red bird, a  
juv. young one in good plumage & all preserved the skin.

After lunch at the house I went out again in the  
direction of the river. The wind had changed into the  
N.W. and blew fresh and cold over the bleak hills. A  
few wild Meadow Larks and some Tree Sparrows were  
the only birds I could find. At length I met Barnard  
who offered to row me across the river to a salt marsh  
where Meadow Larks congregate at evening to spend the  
night. As we approached the place a flock of fully 15  
rose from the marsh and crossed the river. We followed  
and I loaded and stalked them but they rose at  
fully 80 yds. and I fired both barrels at them in  
vain. Herring Gulls were flying about over the corks  
calling ca-ca-ca and clo-cue

Returned to the house by land over the hills. As  
I was skirting the woods when I saw the Grouse this  
morning 'Sandy' suddenly stopped and pointed on the  
edge of some pines. Although fully 200 yds. ahead of me  
he held his point until I reached and passed him when  
a Grouse rose from among the pines. The dog was evidently  
standing on the scent of its feet where it had been  
'scenting' in a bed of Bear Berry (here called Partridge berry).

Dec. 7

Clear and a beautiful day.

Rose before daylight and took the 7.30 train from  
W. Barnstable station for Boston, the Captain driving  
me over. Saw a flock of juncos and heard a  
Downy Woodpecker on the way

Woburn to Fitchburg, Mass.

1884

Dec. 11

Cloudy with warm rain in forenoon. Afternoon clearing with strong N.W. wind becoming cold and piercing towards sunset.

With Mr. W. Fayon took the 11.15 a.m. train for Fitchburg whence we drove to Ashby in the afternoon. The country was bleak and brown except in the more sheltered swamps & ravines where the mountain laurel formed dense masses of shining green foliage. The only birds observed during the entire drive of seven miles were two Crows and a House Sparrow all seen about a mile N. of Fitchburg.

Ashby, Mass.

Dec. 12

Clear & cold the ground frozen hard all day & most of the ponds skimmed over. A high N.W. wind which died away at sunset.

Starting at about 9 a.m. we drove to Mt. Watatic returning late in the afternoon. On the way over we actually did not see a single bird or, indeed, anything living save one red squirrel. On the return drive we saw only a flock of Redpolls flying over some birches just as the train was setting. The absence of the Sparrows & Chickadees is something I cannot account for. There were many alder swamps & weed patches suitable for the former & plenty of pines for the latter, all along the road at intervals.

At Watatic we stabled "Hiram" in a rickety old barn and then began the ascent of the mountain on the N.W. side. It proved a rough, tiresome & somewhat dangerous climb for the ledges were slippery with glass ice and there was no path through the dense spruce forest. The wind fairly howled in the trees and we were chilled through in spite of the violent exertion. We passed what seemed to be a den of the Canada Porcupine at the foot of a vertical ledge. There were several holes at the foot of the rock all more or less strewn with fresh dung and showing evident signs of occupancy. We looked closely for quills but found only grayish hair most nearly it

used to me, like that of a rabbit. Nevertheless the day  
was not without some fine finds! One of the latter contained  
unloasted pieces of stringy bark.

At about 1600 ft. in a swampy opening among scrubby spruces we  
started a Ruffed Grouse, the first and only bird which we saw on  
the mountain proper. It seemed incredible that there should not  
be at least a few Chickadees but we covered the evergreen forest  
area pretty thoroughly without hearing so much as a chirp.

Winding around the south east slope we finally reached the  
summit where we had a remarkably fine view. We could see  
the houses on Arlington Heights distinctly. The wind, however,  
swept the bare peak with such force that we were glad to  
descend a few rods on the sunny & sheltered side where we  
lunched.

There being evidently no birds on the mountain itself we  
went down to descend to the base and circle back through the  
more sheltered woods below. We were separated and I was forcing  
my way through some rather dense spruces in one of the  
lower pastures when I came suddenly on a flock of Pine  
Grosbeaks. I took the first I saw, a fine red ♂, for a Robin as  
it flitted across an opening but soon discovered my mistake &  
shot the bird. As I was crapping him in I saw the others  
returned and clustering in the top of a spruce began eating  
the terminal buds when I picked out another red bird &  
shot him also.

Faxon was out with me and kept on two or three times  
jointly flushing two Grouse along the edge of the big swamp  
where we heard the Contopus borealis last time. One of the  
Grouse rose from an open field near the swamp, the other  
among mountain laurel. Both were very wild.

Near the road we saw a Thrasher, a very brown bird which  
suddenly appeared with a field mouse in his bill and alighting  
in a moment, flew again into some bushes where we lost him.

July, 1888

188

13

Warmer than yesterday with high S.W. wind and alternate clouds and sun. It is the first time the birds are singing, a small sparrow in the air.

Off on foot with Fayou for the entire day, striking at 9<sup>00</sup> and going over nearly the same ground covered during the last day of our visit in June. Very few birds; - a flock of Chickadees and two Red-bellied Nuthatches in the pine along the river and a single Gold-crowned Kinglet in the Chickadees, four Kinglets (Satrapa), two Nuthatches (canadensis), and two Crows in white pine woods on the edge of the swamp where we heard the D. canescens in June, two Kinglet towns started among laurel in this swamp and a third which rose from a bare hill-side where the wood had been lately cut, a Sparrow not positively identified but thought to be S. monticola which Fayou flushed from a weed stubble and which disappeared in a swamp thicket, then with a few Redpolls found in the weed stubble just mentioned and a flock of twenty five or thirty seen near Mr. Brooks' house before we started were later by all the birds noted save two Crows which Fayou saw from his windows early in the evening.

Mr. Peaslee, a young school teacher boarding with the Brooks tells me that he found both the Spotted Woodpeckers near Ashby in the winter of 1888 and that he also saw A. t. alba (carolinensis) and Purple Jays in the village. A wood-chopper whom we interviewed yesterday near Watalic also asserted that he occasionally saw Egg-cocks (Hypotaenidia) on the mountain in winter and large flocks of "snow-birds" (P. nivalis) in the fields. The latter, he said, appeared only after heavy snow storms. Both ~~two~~ of the persons just mentioned, <sup>as well as Mr. Brooks</sup> were positive that no Crows winter about Ashby.

mountain and the main was to the west, and  
about the same time the winter was so. The  
should be is somewhat mysterious for it is all as  
well wooded and wooded as, and scarcely any  
and wind swept than, Mt. Graylock in the  
where on this trip, we afterwards found a rather  
exceptionally rich nest about the bird winter birds.

During the two days we spent at lobby we saw  
Blue jays, and Woodpeckers of some species, and Hawks, and  
no Sparrows except the single bird above mentioned.

On our return drive to Pittsburg the morning of  
Dec. 14<sup>th</sup> we actually did not see a wild bird of  
any species although the day was still and not at all  
cold.

A few English Sparrows were observed in the village  
of lobby, and one half a dozen.

#### Dec. 14 Lobby to North Adams

Cloudy and still. A snow storm began about  
noon and lasted into the night.

Left Ashby at 8.30 A. M. and drove to Pittsburg  
where we took the 9.51 train for North Adams. A  
little west of Pittsburg we saw, from the car windows,  
a large flock of Redpolls, flying. Another flock was  
seen later. These with some five or six Crows were  
the only birds noticed.

1887

Dec. 15

Cloudy with brief intervals of sunshine & frequent snow squalls.

We reached N. Adams yesterday at 1 P.M. and after Black bears  
 making some purchases in the town drove to Lake Umbagog & other large  
 in the Notch. A fur dealer in N. Adams told us that bears mammals.  
 are still found in the town of N. Adams in the  
 town of N. Adams where a very fine specimen weighing 248 lbs.  
 was sent in the flesh only a few days ago. The hunters  
 usually bring them into Vermont before killing them as there is  
 a bounty of \$10.00 in the latter state. There have been  
 killed this autumn two of them just across the Vermont  
 border. None have been seen on Graylock for upwards of  
 forty years. There are a few wild cats on both ranges  
 but no deer on either. Deer have not existed in N. Adams  
 for nearly fifty years. Otters are very scarce but one was  
 seen in the river just below N. Adams last week.

When Fayou & I started forth this morning we found  
 the ground covered with about five inches of damp snow.  
 The spruces above the house were nearly as <sup>solidly</sup> white as the ground  
 and the hard-wood forests still higher up on the mountain in  
 side pale pearl gray or bluish-white this color probably  
 resulting from a combination of the warm gray & brown  
 tints of the twigs with the thin covering of snow which  
 encrusted them.

Starting directly up the steep hillside we soon reached  
 the belt of pasture spruces. They were fairly loaded with  
 snows which bent the more slender lateral branches nearly  
 or quite to the ground forming arches and bowers under  
 which the earth was nearly bare. It was a scene  
 of bewildering beauty, this conifer forest crusted with  
 glistening white crystals. Even the most delicate grasses  
 were loaded down, growing fern-like traceries. As we

pushed our way in among the trees the snow fell on us in showers whenever we broke a branch.

The first bird, as on Mt. Katahdin, was a Ruffed Grouse which sprang from under a spruce within a few yards of us and huddled off up the mountain side. He afterwards huddled within a similar shelter, on both places the ground under the spruces was thickly covered with tracks but neither bird had covered more than a few yards being its own wing capable.

We next met a little flock of five Chickadees apparently having a hard time to get a breakfast among the snow-encrusted conifers. Less than 200 yds. beyond them we suddenly heard the sharp, emphatic notes of Parus hudsonicus and soon a single bird of this species flew from a grove of tall, old-growth spruces into the denser, more shrubby pasture growth. Here he kept closely concealed & we did not get another fair view of him. As we were following him ~~thence~~ we heard a Pine Grosbeak call and Taylor saw the bird, flying high overhead.

After this we heard or saw several more Parus atricapillus, two Sitta canadensis and a single Blue Jay.

We walked nearly to the Bellows Pipe at the head of the valley and returned along the cart path. Fox tracks were numerous especially about springy places & in the open pastures. Among the spruces we saw tracks of the red squirrel but none anywhere of rabbits although ~~two~~ two species (L. americanus & L. hyemalis) are said to occur in these spruce pastures.

The numerous noisy little brooks (called "gutters") which tumble down the mountain side literally every few rods were very beautiful to-day being arched over in places by snow or ice. We reached the house late in the afternoon.

1889

Dec. 16

Cloudless, the air frosty - bracing in early morning and at evening, peculiarly hot and balmy at midday. Snow thawing all day in the sun but perfectly "dry" in the shade. Absolutely calm, not so much as a breath of wind from sunrise to sunset.

Under the conditions just described it may be readily inferred that this day was a rare one for the season. The snow-laden trees, undisturbed by wind and but little affected by the sun, were quite as perfect as yesterday and much more effective in the strong, clear light with the cloudless blue sky overhead. I do not think I ever saw anything nearly as beautiful of the kind before. Words simply fail to give any idea of it.

Faxon and I started out at 7.30 A. M. (sunrise in the hotel) taking the cart path up the valley but soon ~~perceiving~~ he keeping on to the "Bellows Pipe" and beyond I turning to the right up into the pasture spruces. These, in the clear sunlight, were even more beautiful than yesterday - snow trees - every twig, every needle even, so perfectly encrusted that but little green showed through. It made my eyes ache to look at them yet I paused and looked and looked again, every few yards.

I had gone only a few rods when a Grouse suddenly began snickering within a few yards. I crept cautiously into the cluster of spruces whence the sound issued but could neither see nor flush it. There was a mere dust of snow under the trees - not over an inch in fact and this was everywhere marked therein, with the bird's tracks showing that it had snubbed about a good deal within its limited domain. A Partridge leaps about on its own, from four to five inches away. The footprints are on a line, that is one nearly in front of another or nearly in front there being some slight shuffling. The lateral toes are put down nearly at right angles with the middle toe. The track resembles a Quail's as well as a Pigeon's. There was no indication

that the bird had obtained any food during its short  
rambles.

On reaching the cluster of tall spruces which we visited yesterday  
I heard small birds chirping and soon discovered a mixed flock  
containing five Chickadees, two Nuthatches (*canadensis*), & a *Certhia*. I  
shot one of each species when the report of my gun started some  
Hudson Bay Chickadees to calling in the pasture spruces outside. I  
shot two of them and am very sure there was a third.

Next ascended the mountain about 500'. Higher upland  
the hardwood timber, yellow & paper birches, beeches, sugar maples  
and basswood many of the trees very large & old with trunks  
2 to 4 ft. in thickness and tops blasted. Some of the yellow beeches  
were nearly as large at the top as at the base, the lateral branches  
long & stout, the bark exceedingly rough. In these woods  
I found Chickadees, Red-bellied Nuthatches & White-bellied do. but  
no Woodpeckers or Crows. Many squirrel tracks were numerous and I  
saw one of the squirrels a fine large fellow sitting in a bush with  
tail pressed tight against his back in the conventional taxider-  
mists attitude. He fled to a tall hollow Beech as I approached.

Climbing still higher I entered a belt of old-growth spruces  
well up to the top of the ridge. They were large trees but with branches  
nearly to the ground leaving, however, a clear space beneath so  
that the eye could roam over the snow covered ground for a  
hundred yards or more on every side. An old logging road  
traversed these woods & I followed it nearly half a mile. The  
sun was nearly down behind the ridge and the light under the  
trees softened and subdued yet fairly strong. It was wonderfully  
still - a breathing stillness broken only by the occasional chirp of  
a Red Squirrel or the whining call of a Nuthatch (*canadensis*).  
There were many of the latter feeding on the spruce seeds, the scales  
of which floating down to the noise of the fish attracted my  
attention to the bird at work above. The snow was very clean marked  
by the tracks of red squirrels, foxes & mice. I heard Pine Grosbeaks &  
White (S. *albertina*). Healed Wilson's again & found a *strymon* calling  
with some.

I had barely time to get my clothes, have my trunk & take the last look at the  
country which I reached at 11 P.M. From New Corner, Blue Jay & Heavy Woodpecker
